Micro-Organisms in Foods International Commission on Microbiological Specifications for Foods Staff, 2012-12-06. *Microbiology of Foods 6 Microbial Ecology of Food Commodities* was written by the ICMSF comprising 19 scientists from 11 countries plus 12 consultants and 12 chapter contributors. This book brings up to date *Microbial Ecology of Foods Volume 2 Food Commodities* 1980 Academic Press, taking account of developments in food processing and packaging, new ranges of products and foodborne pathogens that have emerged since 1980. The overall structure of each of the chapters has been retained viz they cover i the important properties of the food commodity that affect its microbial content ii the initial microbial flora at slaughter or harvest iii the effect of harvesting

transportation processing and storage on the microbial content and iv the means of controlling processes and the microbial content The section on Choice of Case has not been included in this 2nd edition reflecting the changed emphasis in ensuring the microbiological safety of foods At the time of publication of Microbial Ecology of Foods Volume 2 Food Commodities control of food safety was largely by inspection and compliance with hygiene regulations coupled with end product testing Such testing was put on a sound statistical basis through sampling plans introduced in Microorganisms in Foods 2 Sampling for Microbiological Analysis Principles and Specific Applications 2nd edition 1986 University of Toronto Press *Microbial Decontamination of Food* Manzoor Ahmad Shah, Shabir Ahmad Mir, 2022-09-28 Food is contaminated in the production chain and is the point of concern among the consumers and industries There is also a considerable increase in foodborne outbreaks which possess the challenge to industry associated with the production of processed food Various strategies are used to prevent the contamination during postharvest stage storage and distribution Different methods are exploited for degrading or eliminating the microbial contamination from food commodities The conventional techniques used for decontamination demanded a considerable requirement for novel technologies which are efficient environmental friendly and cost effective Novel technologies efficiently remove the contamination without adversely affecting the nutritional properties and sensory characteristics of food material There is a lack of scientific information on the microbial decontamination of different food commodities such as fruits vegetables cereals sprouts microgreens meat poultry milk nut spices etc under one umbrella The application of conventional and novel technologies for improving the food safety of individual food commodities will be addresses in this book Written by several experts in the field this book is a valuable source for students scientists and professionals in food science food microbiology food technology food processing and other allied sciences Research Contributions Presented at the Ninth Session of the Working Party on Fish Technology and Marketing Food and Agriculture Organization of the United Nations, Indo-Pacific Fishery Commission.
