Colonizing Animals Jonathan Saha, 2021-11-11 Animals were vital to the British colonization of Myanmar In this pathbreaking history of British imperialism in Myanmar from the early nineteenth century to 1942 Jonathan Saha argues that animals were impacted and transformed by colonial subjugation By examining the writings of Burmese nationalists and the experiences of subaltern groups he also shows how animals were mobilized by Burmese anticolonial activists in opposition to imperial rule In demonstrating how animals such as elephants crocodiles and rats were important actors never fully under the control of humans Saha uncovers a history of how British colonialism transformed ecologies and fostered new relationships with animals in Myanmar Colonizing Animals introduces the reader to an innovative historical methodology for exploring interspecies relationships in the imperial past using innovative concepts for studying interspecies empires that draw on postcolonial theory and critical animal studies

African Insectivora and Elephant-shrews Martin E. Nicoll, Galen B. Rathbun, IUCN/SSC Insectivore, Tree-Shrew, and Elephant-Shrew Specialist Group, 1990 The three

mammalian orders Insectivora Scandentia and Macroscelidea all comprise small terrestrial mammals that are primarily adapted to an insectivorous diet In general we know very little about the threats facing the African Insectivora and elephant shrews However the little we know suggests that they tend to be at risk from habitat modification rather than from direct exploitation of the species themselves Both on the African mainland and on Madagascar there are several centres of exceptional diversity and endemism for these species These centres are identified in this Action Plan and the principal conservation priority is the maintenance of sufficient areas of suitable habitat in these centres
