A Polar Dictionary Bernadette Hince, 2025-07-08 This ice breaking book collects the English words of the Antarctic and the Arctic for the first time These words relate to weather ice and snow auroras clothes food housing social structures wildlife plants politics as well as many other aspects of polar life The terms are presented with scientific precision a helpful interpretative commentary and moments of irresponsible whimsy Apart from Antarctica and the Arctic the regions covered here stretch to places as remote as the Faroe Islands Iceland Tristan da Cunha and the Falkland Islands

Terra Michael Novacek, 2008-11-11 A paleontologist awakens us to the extinction event that human activity is bringing about today The natural world as humans have always known it evolved close to 100 million years ago with the appearance of flowering plants and pollinating insects during the age of the dinosaurs Its tremendous history is now in danger of profound catastrophic disruption In Terra a brilliant synthesis of evolutionary biology paleontology and modern environmental science Michael Novacek shows how all three can help us understand and prevent what he and others call today's mass extinction event Humanity's use of land our consumption the pollution we create and our contributions to global warming are causing this crisis True the fossil record of hundreds of millions of years reveals that wild and bounteous nature has always evolved not quietly but thunderously as species arise flourish die off and are replaced by new species We learn from paleontology and archaeology that for 50 000 years human hunting mining and agriculture have changed many localities sometimes irrevocably But today Novacek insists our behavior endangers the entire global ecosystem And if we disregard through ignorance antipathy or apathy the theory of evolution that developed with our modern understanding of the Earth's past we not only impede enlightenment but threaten any practical strategy for our own survival The evolutionary future of the entire living planet depends on our understanding this

Alkaline Rocks and Carbonatites of the World, Part 4 A.R. Woolley, 2019-09-02 The alkaline igneous rocks and carbonatites are compositionally and mineralogically the most diverse of all igneous rocks and apart from their scientific interest are of major and growing economic importance They are important repositories of certain metals and commodities indeed the only significant sources of some of them and include Nb the rare earths Cu V diamond phosphate vermiculite bauxite raw materials for the manufacture of ceramics and potentially Th and U The economic potential of these rocks is now widely appreciated particularly since the commencement of the mining of the Palabora carbonatite for copper and a host of valuable by products Similarly the crucial economic dominance of rare earth production from carbonatite related occurrences in China has stimulated the world wide hunt for similar deposits This volume describes and provides ready access to the

literature for all known occurrences of alkaline igneous rocks and carbonatites of Antarctica Asia and Europe excluding the former USSR Australasia and oceanic islands More than 1 200 occurrences from 59 countries are outlined together with those of 57 oceanic islands and island groups The descriptions include geographical coordinates and information on general geology rock types petrography mineralogy age and economic aspects with the principal references cited There are 429 geological and distribution maps and a locality index As has been demonstrated by the three earlier volumes the present book is likely to be of considerable interest to mineral exploration companies as there are no comprehensive published reviews of the economic aspects of the alkaline rocks It will also interest research scientists in the fields of igneous petrology and volcanology and geologists concerned with the regional distribution of igneous rocks and their geodynamic relationships

Alistair Crame, 2006 High latitude settings are sensitive to climatically driven palaeoenvironmental change and the resultant biotic response Climate change through the peak interval of Cretaceous warmth Late Cretaceous cooling onset and expansion of the Antarctic ice sheet and subsequently the variability

of Neogene glaciation are all recorded within the sedimentary and volcanic successions exposed within the James Ross Basin Antarctica This site provides the longest onshore record of Cretaceous Tertiary sedimentary and volcanic rocks in Antarctica and is a key reference section for Cretaceous Tertiary global change The sedimentary succession is richly fossiliferous yielding diverse invertebrate vertebrate and plant fossil assemblages allowing the reconstruction of both terrestrial and marine systems The papers within this volume provide an overview of recent advances in the understanding of palaeoenvironmental change spanning the mid Cretaceous to the Neogene of the James Ross Basin and related biotic change and will be of interest to many working on Cretaceous and Tertiary palaeoenvironmental change **American Museum of**
