Natural Kinds And Conceptual Change:

Natural Kinds and Conceptual Change Joseph LaPorte, 2004 *Natural Kinds and Conceptual Change* Joseph LaPorte, 2003-12-08 According to the received tradition the language used to refer to natural kinds in scientific discourse remains stable even as theories about these kinds are refined In this illuminating book Joseph LaPorte argues that scientists do not discover that sentences about natural kinds like Whales are mammals not fish are true rather than false Instead scientists find that these sentences were vague in the language of earlier speakers and they refine the meanings of the relevant natural kind terms to make the sentences true Hence scientists change the meaning of these terms This conclusion prompts LaPorte to examine the consequences of this change in meaning for the issue of incommensurability and for the progress of science This book will appeal to students and professional in the philosophy of science the philosophy of biology and the philosophy of language *Natural Kinds and Classification in Scientific Practice* Catherine Kendig, 2015-12-22 This edited volume of 13 new essays aims to turn past discussions of natural kinds on their head Instead of presenting a metaphysical view of kinds based largely on an unempirical vantage point it pursues questions of kindedness which take the use of kinds and activities of kinding in practice as significant in the articulation of them as kinds The book brings philosophical study of current and historical episodes and case studies from various scientific disciplines to bear on natural kinds as traditionally conceived of within metaphysics Focusing on these practices reveals the different knowledge producing activities of kinding and processes involved in natural kind use generation and discovery Specialists in their field the esteemed group of contributors use diverse empirically responsive approaches to explore the nature of kindhood This groundbreaking volume presents detailed case studies that exemplify kinding in use Newly written for this volume each chapter engages with the activities of kinding across a variety of disciplines Chapter topics include the nature of kinds kindhood kinding and kind making in linguistics chemical classification neuroscience gene and protein classification colour theory in applied mathematics homology in comparative biology sex and gender identity theory memory research race extended cognition symbolic algebra cartography and geographic information science The volume seeks to open up an as yet unexplored area within the emerging field of philosophy of science in practice and constitutes a valuable addition to the disciplines of philosophy and history of science technology engineering and mathematics **Conceptual and Ethical Challenges of Evolutionary Medicine** Ozan Altinok, 2023-11-11 This book analyses the concept of disease as defined in the context of evolutionary medicine Upon introducing the reader to evolutionary medicine in its current form and describing its approach to disease instances the book leverages thoughts and instruments of knowledge of epistemology social sciences and ethics to answer the question How can we build a timely and appropriate concept of disease At first it looks at the social concerns of medicalization for example focusing on the suffering of people who have not been diagnosed or whose suffering is not caused by certain elements that falls under the definitions of disease In turn it merges different both conceptual and

empirical considerations in one comprehensive analysis with the aim of fostering a multidisciplinary understanding of the phenomenon of disease This book also highlights certain kinds of epistemic injustices that are taking place in the healthcare system as this is currently conceived in post industrial societies thus offering a timely contribution to the current debate around social justice in healthcare

Concepts, Kinds, and Cognitive Development Frank C. Keil, 1992-01-30 In Concepts Kinds and Cognitive Development Frank C Keil provides a coherent account of how concepts and word meanings develop in children adding to our understanding of the representational nature of concepts and word meanings at all ages Keil argues that it is impossible to adequately understand the nature of conceptual representation without also considering the issue of learning Weaving together issues in cognitive development philosophy and cognitive psychology he reconciles numerous theories backed by empirical evidence from nominal kinds studies natural kinds studies and studies of fundamental categorical distinctions He shows that all this evidence when put together leads to a better understanding of semantic and conceptual development The book opens with an analysis of the problems of modeling qualitative changes in conceptual development investigating how concepts of natural kinds nominal kinds and artifacts evolve The studies on nominal kinds document a powerful and unambiguous developmental pattern indicating a shift from a reliance on global tabulations of characteristic features to what appears to be a small set of defining ones The studies on natural kinds document an analogous shift toward a core theory instead of simple definition Both sets of studies are strongly supported by cross cultural data While these patterns seem to suggest that the young child organizes concepts according to characteristic features Keil argues that there is a framework of conceptual categories and causal beliefs that enables even very young children to understand kinds at a deeper theoretically guided level This account suggests a new way of understanding qualitative change and carries strong implications for how concepts are represented at any point in development A Bradford Book

Probabilities, Laws, and

Structures Dennis Dieks, Wenceslao J. Gonzalez, Stephan Hartmann, Michael Stöltzner, Marcel Weber, 2012-02-02 This volume the third in this Springer series contains selected papers from the four workshops organized by the ESF Research Networking Programme The Philosophy of Science in a European Perspective PSE in 2010 Pluralism in the Foundations of Statistics Points of Contact between the Philosophy of Physics and the Philosophy of Biology The Debate on Mathematical Modeling in the Social Sciences Historical Debates about Logic Probability and Statistics The volume is accordingly divided in four sections each of them containing papers coming from the workshop focussing on one of these themes While the programme's core topic for the year 2010 was probability and statistics the organizers of the workshops embraced the opportunity of building bridges to more or less closely connected issues in general philosophy of science philosophy of physics and philosophy of the special sciences However papers that analyze the concept of probability for various philosophical purposes are clearly a major theme in this volume as it was in the previous volumes of the same series This reflects the impressive productivity of probabilistic approaches in the philosophy of science which form an important part of what has become known as formal epistemology although of course there are non probabilistic approaches in formal epistemology as well It is probably fair to say that Europe has been particularly strong in this area of philosophy in recent years

Structure and Thought Daniel Sacilotto, 2024-02-15 Offers a new understanding of representational cognition that synthesizes postwar philosophical approaches to the question of objective knowledge This study develops a novel account of representational cognition explaining how cognitive systems progressively come to map the structure of their worlds Daniel Sacilotto offers a constructive response to the critique of representation formulated throughout the post Kantian philosophical tradition Rather than a skepticism or idealism whereby thinking can grasp appearances but never the real representation Sacilotto shows is a constitutive dimension of cognitive systems creative capacity to know and intervene in the world of which they are part *Structure and Thought Toward a Materialist Theory of Representational Cognition* integrates various lines in contemporary philosophy including those often seen as incommensurable or in irresolvable tension with one another Sacilotto thus advances a productive synthesis of a materialist ambition to provide a creative and historical understanding of cognition with a structural realist account of representation He shows how the different forms of sensory discursive and theoretical mediation that characterize human cognition are conducive to a realist epistemological framework that explains how the possibility of knowledge about a mind independent

reality is conceivable [Creations of the Mind](#) Eric Margolis, Stephen Laurence, 2007-06-14 Creations of the Mind presents sixteen original essays by theorists from a wide variety of disciplines who have a shared interest in the nature of artifacts and their implications for the human mind All the papers are written specially for this volume and they cover a broad range of topics concerned with the metaphysics of artifacts our concepts of artifacts and the categories that they represent the emergence of an understanding of artifacts in infants cognitive development as well as the evolution of artifacts and the use of tools by non human animals This volume will be a fascinating resource for philosophers cognitive scientists and psychologists and the starting point for future research in the study of artifacts and their role in human understanding development and behaviour Contributors John R Searle Richard E Grandy Crawford L Elder Amie L Thomasson Jerrold Levinson Barbara C Malt Steven A Sloman Dan Sperber Hilary Kornblith Paul Bloom Bradford Z Mahon Alfonso Caramazza Jean M Mandler Deborah Kelemen Susan Carey Frank C Keil Marissa L Greif Rebekkah S Kerner James L Gould Marc D Hauser Laurie R Santos Steven Mithen **Religion, Ethnicity and Xenophobia in the Bible** Brian Rainey, 2018-11-21 Religion Ethnicity and Xenophobia in the Bible looks at some of the Bible s most hostile and violent anti foreigner texts and raises critical questions about how students of the Bible and ancient Near East should grapple with ethnicity and foreignness conceptually hermeneutically and theologically The author uses insights from social psychology cognitive psychology anthropology sociology and ethnic studies to develop his own perspective on ethnicity and foreignness Starting with legends about Mesopotamian kings from the third millennium BCE then navigating the Deuteronomic and Holiness traditions of the Hebrew Bible and finally turning to Deuterocanonicals and the Apostle Paul the book assesses the diverse and often inconsistent portrayals of foreigners in these ancient texts This examination of the negative portrayal of foreigners in biblical and Mesopotamian texts also leads to a broader discussion about how to theorize ethnicity in biblical studies ancient studies and the humanities This volume will be invaluable to students of ethnicity and society in the Bible at all levels

evolved over recent years with the development of the cardiac implantable defibrillator and the application of the cardiac resynchronization therapy to improve performance of the congestive failed heart. There is an impressive amount of literature produced to assess the efficacy and effectiveness of the electrical therapy. New technology is continuously introduced into the market for the treatment of electrical heart disease with optimized performance and implemented design with approximately 600 000 new pacemakers implanted each year. Attention of the electrophysiology community has mainly focused on the biomedical aspects of electrical therapy but the psychological, emotional, social and cognitive aspects of the implantable devices has been largely overlooked. Health related quality of life (QoL) and to a lesser extent psychological disorders i.e. anxiety and depression have rarely been assessed as outcomes in clinical trials and results are pointing towards the impact of the implantable devices on QoL and mental health not being direct but moderated and mediated by several biomedical as well as psychosocial variables. Furthermore the cognitive effects of the implantable devices have rarely been assessed in empirical studies although cognitive impairment is largely associated with the heart disorders that require implantation of an electrical device and cognitive benefits are strongly expected from the therapy. The aim of this book is to collect, appraise and condense the results of all empirical studies that have investigated even marginally the relationships between the implantable devices and any psychological, emotional, social and cognitive dimension. This book is a cornerstone for all involved in device utilization: physicians, nurses, technicians, industry representatives that need to understand this topic.

The Routledge Handbook of Scientific Realism Juha Saatsi, 2017-11-22. Scientific realism is a central, long standing and hotly debated topic in philosophy of science. Debates about scientific realism concern the very nature and extent of scientific knowledge and progress. Scientific realists defend a positive epistemic attitude towards our best theories and models regarding how they represent the world that is unobservable to our naked senses. Various realist theses are under sceptical fire from scientific antirealists e.g. empiricists and instrumentalists. The different dimensions of the ensuing debate centrally connect to numerous other topics in philosophy of science and beyond. The Routledge Handbook of Scientific Realism is an outstanding reference source, the first collection of its kind to the key issues, positions and arguments in this important topic. Its thirty four chapters, written by a team of international experts, are divided into five parts: Historical development of the realist stance; Classic debate; core issues and positions; Perspectives on contemporary debates; The realism debate in disciplinary context; Broader reflections. In these sections the core issues and debates presented are analysed and set into broader historical and disciplinary contexts. The central issues covered include motivations and arguments for realism; challenges to realism from underdetermination and history of science; different variants of realism; the connection of realism to relativism and perspectivism; and the relationship between realism, metaphysics and epistemology. The Routledge Handbook of Scientific Realism is essential reading for students and researchers in philosophy of science. It will also be very useful for anyone interested in the nature and extent of scientific knowledge.

Matilal, Jaysankar Lal Shaw, 2012-12-06 We are grateful to the authors who wrote papers specially for this volume and kindly gave their permission for printing them together None of these papers appeared anywhere before Our special thanks are due to the first six authors who kindly responded to our request and agreed to join this new venture which we are calling comparative perspective in analytical philosophy In the introductory essay certain salient points from each paper have been noted only to show how comparative perspective may add to and be integrated with modern philosophical discussion in the analytic tradition Need less to say any mistake possible misattribution or misrepresentation of the views of the original authors of the papers appearing in the said introductory essay is entirely the responsibility of the author of that essay The author apologizes if there has been such unintentional misrepresentation and insists that the readers should depend upon the original papers themselves for their own understanding For typographical problems it has not always been possible to use the symbols originally used by the authors but care has been taken to use the proper substitute for each of them Bimal K Matilal ANALYTICAL PHILOSOPHY IN COMPARATIVE PERSPECTIVE AN INTRODUCTION 1 The aim of this volume is to extend the horizon of philosophical analysis as it is practiced today
