Randall Collins. *The Sociology of Philosophies: A Global Theory of Intellectual Change*. Cambridge: Harvard University Press, 1998. 1098 pp. \$49.95. ISBN 0-674-81647-8.

Randall Collins is one of America's great sociological theorists, but his new book, *The Sociology of Philosophies: A Global Theory of Intellectual Change*, may have succeeded in writing him out of his own rather considerable reputation. *The Sociology of Philosophies* is a book of breathtaking scope, offering a provocative theory of intellectual creativity and reputations that challenges the very category of a "great theorist" while solidifying Collins's place at the forefront of the sociology of ideas and knowledge. Using a world history of philosophy as case material, Collins outlines a powerful theoretical framework for the social scientific analysis of intellectual networks, academic disciplines and the world of ideas itself. Collins's book will start arguments as well as inspire new research, and it is not difficult to predict the controversies that will emerge.

The Sociology of Philosophies is practically a recipe for a turf war. Many intellectual historians will be shocked at the hubris of Collins's analysis. Never one prone to thinking in narrow and specialized terms, Collins offers us a global analytic history of philosophical thinking from the Greeks, Romans, the Enlightenment philosophers, the Reformation and Medieval Catholic theology through to the existentialism in the West, as well as dealing in great detail with non-Western thought over many centuries in China, India, and Japan. Many philosophers will be outraged by Collins's argument that the concept of a "great philosopher" is a social construction, reflecting the needs of intellectual networks fixated on a competition for attention more than on the intrinsic quality of ideas or on a disinterested search for truth. Collins treats many major philosophers with skeptical involvement, as when he calls F. W. J. Schelling a "niche hog" and refers to Ludwig Wittgenstein's "personality cult" and brooding over suicide as a claim for status in the intellectual elite. Collins's book-length attempt to explain philosophers' creativity and reputations by social, organizational, and network factors will rattle teachers, as when he offers a sociological account of why G. W. F. Hegel made it and Arthur Schopenhauer did not. And intellectuals more generally will find little comfort in Collins's brutally unsentimental critique of the cult of the intellectual hero. Collins draws a picture of intellectuals as self-interested, calculating status climbers who are as concerned with gaining eminence and financial security as they are with the various social and intellectual movements and causes often associated with what we now call "public intellectuals."

Collins's critics have a point. The merits of contemporary intellectual history rightly call for specialization in specific geographic areas in particular forms, allowing for the consultation of primary documentary evidence in original languages and the mastery of the relevant literature. Collins, in contrast, writes a global intellectual history based on secondary sources. Errors of detail are inevitable in this book, as is a sacrifice of depth. And while Collins's discussion of world philosophical ideas is well written and impressive, specialists will have many interpretations to challenge and nuances to add. These legitimate criticisms of Collins's book, however, should not deter us from taking his theory of intellectual creativity and reputation very seriously indeed.

Turf wars work both ways. Intellectual historians who work in one area or within a

Nature in the History of Economic Thought Nathaniel Wolloch, 2016-10-04 From antiquity to our own time those interested in political economy have with almost no exceptions regarded the natural physical environment as a resource meant for human use Focusing on the period 1600 1850 and paying particular attention to major figures including Adam Smith T R Malthus David Ricardo and J S Mill this book provides a detailed overview of the intellectual history of the economic consideration of nature from antiquity to modern times It shows how even someone like Mill who was clearly influenced by romantic notions regarding the spiritual need for contact with pristine nature ultimately regarded it as an economic resource Building on existing scholarship this study demonstrates how the rise of modern sensitivity to nature from the late eighteenth century in particular was in fact a dialectical reaction to the growing distance of modern urban civilization from the natural environment As such the book offers an unprecedentedly detailed overview of the intellectual history of economic considerations of nature whilst underlining how the history of this topic has been remarkably consistent

Nature, Enlightenment, and University Reforms in the Iberian Peninsula: A Comparative Analysis of the Universities of Salamanca and Coimbra

(1766-1820) Carlos Fernando Teixeira Alves, 2024 The university reforms that took place in Europe throughout the 18th century were an important moment of change in the history of these institutions In the Iberian Peninsula this wave of reforms left its mark in Coimbra and Salamanca later reaching the other Spanish universities Portugal and Spain were no strangers to the motivations and even to the general lines of this wave of reforms Inseparable from the ideas of the Enlightenment and with a clear will to combat the backwardness and decadence of these institutions rather ambitious projects emerged albeit in different degrees Coimbra faced a rather disruptive initial situation while in Salamanca later plans 1807 for example proved to be quite ambitious as well All having a mandatory nature it would not be correct to say that these Universities did not participate in these processes of reform Individually or on behalf of collective bodies several initiatives and proposals emerged during this period in both Universities In addition the participation of professors in the statutes and plans that were launched since 1771 is recurrent Beyond this aspect it will not be forced to state that the curricular aspect was the most significant mark of these reforms Thus we chose to study in a comparative way subjects that sought to explain the concept of nature and its products With the clear objective of preparing a body of technicians capable of providing a rational and effective exploitation of the various natural products the faculties of mathematics and philosophy emerged In the case of medicine natural products were essential to produce medicines and in this sense the reform of this knowledge brought among other changes matters linked to pharmaceutical studies In the area of law a relevant introduction was natural law The perception of natural law was not similar in both countries and an evident consequence was the greater instability of this

chair in Salamanca Inseparable from the curricular aspects was the adoption of foreign compendia and the encouragement given to the teachers to write their own textbooks The adoption of textbooks was quite similar and clearly shows us the lines that reformers sought to follow to modernize these university institutions *Nature and the Godly Empire* Sujit Sivasundaram,2005-11-17 A study of the relations between nineteenth century science and Christianity Thought Experiments between Nature and Society Bojan Borstner,Smiljana Gartner,2017-06-23 As a prominent figure in analytic philosophy of the 20th and 21st centuries Nenad Mi evi has enriched enhanced and expanded many areas of the field This volume dedicated to him for his 65th birthday follows the virtues he so much respects conceptual analysis rigorous use of logics and clear definitions and applies them to a very hot topic in philosophy thought experiments Present throughout the history of philosophy thought experiments have become indispensable for the discipline and for analytic philosophy in particular But questions can be asked as to what exactly is a thought experiment what it consists of and most importantly if it is even useful for philosophy Next to these conceptual questions this collection tackles thought experiments that have tradition some of them very long like The Ring of Gyges The Social Contract and Descartes Evil Demon Others like Twin Earth Gettier cases and Brain in a Vat thought experiments have prompted at least half a century long trails One cannot understand contemporary analytic philosophy without understanding these trails and traditions Nenad s closest friends and colleagues from all over Europe share their thoughts on this topic in this book followed diligently by Nenad s comments on their work **Co-Evolution of Nature and Society** Jens Jetzkowitz,2018-08-27 This book offers support for interdisciplinary research on the interactions of nature and society It is based on the hypothesis that a science of coevolution is needed to explore paths to a sustainable future Jens Jetzkowitz initially discusses why social science knowledge only rarely finds its way into sustainability discourse One significant issue is a view of science that separates knowing and acting and the book illustrates current problems in conceptualising interdisciplinary knowledge production It then goes one step further and introduces a workable alternative concept taking philosophical pragmatism as a point of departure Sustainable development goals and transdisciplinarity are currently subject to widespread discussions and Jetzkowitz takes a stance on the debates from the perspective of coevolutionary science This book will appeal to scholars and students interested in environmental and sustainability discourses and to anyone willing to think outside the box Economics and Sustainability Karl Bruckmeier,2020-11-21 This textbook provides an overview of economic perspectives on sustainability It synthesises economic ecological and interdisciplinary sustainability research and by applying an integrated social ecological and economic framework demonstrates how this research can be improved and implemented in practice Split into three parts the book begins by introducing a range of topics forming the basis of knowledge needed to understand the varying sustainability discourses in economics ecology and interdisciplinary sustainability research Chapters cover the political context of sustainability the history of sustainability in European environmental discourses dating back to the seventeenth century as

Human Nature, Mind and the Self in Adam Smith's Moral Philosophy Riccardo Bonfiglioli, 2024-04-24 This book investigates the problematisation in Adam Smith's moral philosophy of a classical question

what makes us human beings from a moral standpoint To do this Riccardo Bonfiglioli explores the relationship between the concepts of human nature mind and the self in order to reconstruct Smith's theory of subjectivity After providing a systematic reconstruction of Adam Smith's conceptions of human nature mind and the self exploring some aspects of Smith's philosophy nature philosophy of history sympathy and imagination and their empirical expressions education conduct and character Bonfiglioli argues that in Adam Smith's work the meaning of moral human beings would depend on the human being's effort to live in harmony with oneself and the others According to Bonfiglioli in Smith's moral theory this harmony with oneself and the others would be achieved in relation to a certain kind of awareness that can be possible when human beings try to judge the conduct and try to act according to the impartial spectator Specifically this impartial spectator is reinterpreted by the author in the light of the concept of immediacy

Capitalism in the Anthropocene John Bellamy Foster, 2022-08-23 Over the last 11 700 years during which human civilization developed the earth has existed within what geologists refer to as the Holocene Epoch Now science is telling us that the Holocene Epoch in the geological time scale ended replaced by the onset of a new more dangerous Anthropocene Epoch which began around 1950 The Anthropocene Epoch is characterized by an anthropogenic rift in the biological cycles of the Earth System marking a changed reality in which human activities are now the main geological force impacting the earth as a whole generating at the same time an existential crisis for the world's population What caused this massive shift in the history of the earth In this comprehensive study John Bellamy Foster tells us that a globalized system of capital accumulation has induced humanity to foul its own nest The result is a planetary emergency that threatens all present and future generations throwing into question the continuation of civilization and ultimately the very survival of humanity itself Only by addressing the social aspects of the current planetary emergency exploring the theoretical historical and practical dimensions of the capitalism's alteration of the planetary environment is it possible to develop the ecological and social resources for a new journey of hope

Frontier Thinking and Human-Nature Relations E. C. H. Keskitalo, 2024-06-12 Combining historical social and regulative analysis this book builds a compelling

critique of frontier thinking as it continues to form our assumptions about social and environmental organisation in ways that impact not least the present environmental crisis This book systematically identifies the ways in which images of nature and society are formed by the historically developed frontier oriented narratives which have underpinned much Anglo American and Anglocentric thought The book confronts these conceptions at large showing that they never held empirically and contrasts them with the situation in northern Europe where diverging assumptions are integral to this day Through this juxtaposition this book illustrates not only the pervasiveness of structures of understanding in steering policy but also the varying traditions regarding how understandings of the environment can be formed This study highlights how historical thought patterns formed for very different reasons than exist today continue to shape our assumptions about nature the relation between urban and rural areas and our understanding of ourselves in relation to the environment This book will be of wide interest to a range of academics and students in the fields of geography anthropology environmental studies sociology political science and development studies amongst others The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license
