

Australia's animals because Australia has been cut off from the rest of the world for over 100 million years, it has very unusual animals. Almost all its mammals are marsupials (mammals with pouches). There are over 150 kinds of Australian marsupials from tiny marsupial mice and moles to marsupial cats. Outside Australia marsupials are only found in South America with just one species in North America.

Honey possum

The honey possum, or Boobonger, of Western Australia, is about the size of a mouse. It has a special way of eating nectar and pollen. Its long tongue is covered with bristles with a tip like a tiny brush. Pollen sticks to the brush as it feeds.

Marsupial records

Largest	Red kangaroo	Up to 2.0 m tall
Smallest	Ingram's planigale	9 cm long
Fastest	Red kangaroo	48 kph
Deepest	Marsupial wolf	Last known 1946
Most common	Kangaroo	Over 50 species
Longest-lived	Common wombat	26 years

Some unusual mammals

Boodie

Member of the rat kangaroo family.

Numbat

Also called a banded anteater.

Quoll

Bandicoot

Pouch mammal from Latin America. Badger with

Wombat

Wombats are the same size as badgers. They dig deep underground tunnels. A large pouch opens up so that the baby is carried inside.

Amazing But True

The biggest collection of marsupial fossils was found in the Naracoorte Caves, Australia, in 1969. They showed giant marsupials including a creature the size of a rhinoceros. It probably died out about 40,000 years ago.

Madagascar is a huge island off the east coast of Africa. It is bigger than France. About 30 million years ago it came separated from Africa. Nine-tenths of the island's animals and plants are found nowhere else in the world. Its most famous animals are lemurs which are related to monkeys and apes.

DID YOU KNOW?

The sportive lemur gets its name because, if attacked, it raises its tail like a boxer and punches its enemy. It feeds on lily tree flowers. The tail is covered in sharp spikes but the lemur does not seem to hurt itself as it leaps from stem to stem.

Rousing chorus

The indri, the largest of the lemurs, lives mostly high up in the tree tops. It uses sound to scare away enemies and call its young. Every morning and evening, families of indris break into wailing songs. Each indri joins in at a different time so the strange chorus may last for many minutes.

Sun worship

Sitakas, or white lemurs, start off each day by lying in the sun for an hour or so. They climb to a tree top and face the sun with their arms outstretched. They do this to warm themselves up after a cool night but local people believed that the lemurs were worshipping the sun.

Fat store

Dwarf lemurs are amongst the smallest of the lemurs. The fat-tailed dwarf lemur eats insects, leaves and sap. During the rainy season it builds up a fat store under its skin and in its tail. It lives off this supply in the dry season when food is scarce.

Tenrecs

Another group of mammals found only in Madagascar are tenrecs. There are about 20 species of these small insect-eaters. Some have bristly coats like hedgehogs, others have fur. The common tenrec is the largest insect-eater in Madagascar. It may be as much as 40 cm (16 in) long, about the same size as a cat.

The Teaching of Science F. R. Jevons, 2022-06-01
First published in 1969 The Teaching of Science primarily deals with science teaching in secondary schools and universities but its searching discussion of criteria concerns all who have to do with education The concise but well documented treatments of the nature of the scientific process and of the social implications of science will be of interest to many scientists and especially useful for teachers of general studies Professor Jevons looks first at why we should teach science and thereby sheds light on the more immediately practical problems of how it should be done He thus does more than merely add to the already large volume of exhortation to make it more attractive and intellectually stimulating

The Sources of Necessity
Tobias Wilsch, 2025-03-23 It is a currently popular view that essences laws and logic are among the grounds of necessity and possibility Another such idea relates essences laws and logic closely to causal explanations and to non causal grounding explanations The Sources of Necessity combines those tenets within the view that certain phenomena establish explanations because they exert necessity a modal force on the facts In form of a slogan the explanatory phenomena are the sources of necessity The book investigates this idea and it argues that essences laws and logic are the sources of necessity The investigation contains two different strands one pertaining to explanation and one to necessity In the first strand The Sources of Necessity uses different ways of exerting necessity to analyse the explanatory behaviour of essences laws and logic It investigates the governance of natural laws the interplay of essences and logic in the generation of absolute necessity and the existence and nature of metaphysical laws The second strand concerns the nature of necessity It is argued that necessity is primitive and that there are several equally fundamental species of necessity Two particularly thorny questions about necessity that arise from these insights are Why are the sources of necessity themselves necessary and Why are different kinds of necessity ordered by strength The book develops a rationalist view to answer those questions It says that contingent reality is the result of a cosmogenic sequence that unfolds from essences and logic through the other sources all the way to the contingent facts

Works Jeremy Bentham, 1843

What's Left of Human Nature? Maria Kronfeldner, 2023-10-31 A philosophical account of human nature that defends the concept against dehumanization Darwinian and developmentalist challenges Human nature has always been a foundational issue for philosophy What does it mean to have a human nature Is the concept the relic of a bygone age What is the use of such a concept What are the epistemic and ontological commitments people make when they use the concept In What's Left of Human Nature Maria Kronfeldner offers a philosophical account of human nature that defends the concept against contemporary criticism In particular she takes on challenges related to social misuse of the concept that dehumanizes those regarded as lacking human nature the dehumanization challenge the conflict between Darwinian thinking and essentialist concepts of human nature the Darwinian challenge and the consensus that evolution heredity and ontogenetic development result from nurture and nature After answering each of these challenges

Kronfeldner presents a revisionist account of human nature that minimizes dehumanization and does not fall back on outdated biological ideas. Her account is post-essentialist because it eliminates the concept of an essence of being human. Pluralist in that it argues that there are different things in the world that correspond to three different post-essentialist concepts of human nature and interactive because it understands nature and nurture as interacting at the developmental, epigenetic, and evolutionary levels. On the basis of this she introduces a dialectical concept of an ever-changing and looping human nature. Finally, noting the essentially contested character of the concept and the ambiguity and redundancy of the terminology, she wonders if we should simply eliminate the term human nature altogether.

Nature, 1877 *Metaphysics, Sophistry, and Illusion* Mark Balaguer, 2021. *Metaphysics, Sophistry, and Illusion* introduces a novel kind of non-factualist view and argues that we should endorse views of this kind in connection with a wide class of metaphysical questions. It also explains how these non-factualist views fit into a general anti-metaphysical view called neo-positivism.
