Cobern, 2000-06-30 Dr Olcbee Lee

School of Education University of Miami Coral Gables Florida 33124 I remember my excitement and appreciation several years ago when I first read World View Theory and Science Education Research by Bill Cobern 1991 It was a comprehensive theoretical discussion of world view theory in science education I am delighted to see that Cobern has taken the next step to provide empirical accounts of world view in Everyday Thoughts about Nature The primary goal of the book is to understand how typical ninth grade students and their science teachers think about Nature or the natural world and how their thoughts are related to science In pursuing this goal the book raises a basic question about the purpose of science education for the

public Should science education seek to educate scientific thinkers in the pattern of the science teachers Or should science education seek to foster sound science learning within the matrices of various cultural perspectives p 3 The answer to this question becomes clear thanks to Cobern's excellent research and persuasive arguments First this research takes a humanistic approach in understanding what students and teachers think about Nature through the language and ideas voluntarily expressed p 1 The research used multi directional prompts and encouraged students and teachers to speak freely and at length in any directions they wished This humanistic approach is stated clearly The research seeks to illuminate some of the various ways in which students think about Nature without judging even the most unorthodox perspectives p 14
