The Mind As a Scientific Object Christina E. Erneling, David M. Johnson, 2005-01-13

What holds together the various fields that are supposed to constitute the general intellectual discipline that people now call cognitive science In this book Erneling and Johnson identify two problems with defining this discipline First some theorists identify the common subject matter as the mind but scientists and philosophers have not been able to agree on any single satisfactory answer to the question of what the mind is Second those who speculate about the general characteristics that belong to cognitive science tend to assume that all the particular fields falling under the rubric psychology linguistics biology and so on are of roughly equal value in their ability to shed light on the nature of mind This book argues that all the cognitive science disciplines are not equally able to provide answers to ontological questions about the mind but rather that only neurophysiology and cultural psychology are suited to answer these questions However since the cultural account of mind has long been ignored in favor of the neurophysiological account Erneling and Johnson bring together contributions that focus especially on different versions of the cultural account of the mind

These authors have a variety to offer to their readers **Latin American Thought** Susana Nuccetelli, 2018-03-05 Latin American Thought examines the relationship between philosophy and rationality in Latin American thought the nature of justice human rights and cultural identity and other questions that have concerned Latin American thinkers from the colonial period to the present day From the Mayans Aztecs and Incas to the present day reveals the assembly of interesting philosophical arguments offered by Latin Americans Nuccetelli traces Latin American thought through questions concerning rationality gender discrimination justice human rights reparation for historically dispossessed peoples and relativism vs universalism all matters of continuing concern in Spanish and Portuguese speaking parts of the world Amongst issues of heated controversy from the early twentieth century to the present also explores how Latin Americans and their descendants abroad think of their own cultural identity of US mass culture and philosophy and of the vexing problem of which name if any to use when referring to this exceedingly diverse ethnic group Many of the philosophical questions raised by Latin American thinkers are problems that have concerned philosophers at different times and in different places throughout the Western tradition But in fact the issues are not altogether the same for they have been adapted to capture problems presented by new circumstances and Latin Americans have sought resolutions in ways that are indeed novel This book explains how well established philosophical traditions gave rise in the New World to a distinctive manner of thinking There was no clean sweep of the past and an attempt to start over rather Latin American thinkers mostly welcomed European ideas at whatever pace such traditions happened to arrive It is then no surprise that for instance Scholasticism became the accepted view under Spanish rule and began to lose its grip only when the rulers did But what does seem surprising is the radical way in which those traditions were transformed to account for problems that though familiar were now seen intake light of new circumstances A distinctive Latin American way of thinking about such problems emerged from the project of recycling European philosophical traditions some of which were already obsolete in Europe at the time their transplant took place Thus theories commonly taken to be incompatible within Western traditions in philosophy were absorbed by Latin American thought and in their newly acquired forms such theories are even now at the basis of proposed solutions to many practical and philosophical problems The book explores that recycling process Above all it aims to determine whether the various cultures that met in the New World could now be said to have come to share a common identity This is in fact an issue which has preoccupied Latin Americans since at least the beginning of the 19th century when their countries won their independence But in connection with this it is also important to ask how Latin Americans have thought about the relationship between philosophy and rationality and about other issues belonging to the major areas of philosophy such as epistemology moral philosophy and political philosophy as well their application to vital social issues including education and the emancipation of women These are all taken up by the author who pays special attention to questions of gender discrimination justice human rights reparation for historically dispossessed peoples and the role of education all matters of continuing

concern in Latin American thought from its earliest stirrings to the present day
