Natures Mind The Impact Of Darwinian Selection On Thinking Emotions Sexuality Language And Intelligence:

The Mind's Affective Life Gemma Fiumara Corradi, 2014-06-11 The Mind's Affective Life is a refreshing and innovative examination of the relationship between feeling and thinking. Our thoughts and behaviour are shaped by both our emotions and reason yet until recently most of the literature analysing thought has concentrated largely on philosophical reasoning and neglected emotions. This book is an original and provocative contribution to the rapidly growing literature on the neglected affective dimensions of modern thought. The author draws on contemporary psychoanalysis, philosophy, feminist theory and recent innovations in neuroscience to argue that in order to understand thought we need to consider not only both emotional and rational aspects of thought but also the complex interactions between these different aspects. Only through such a rich and complicated understanding of modern thought can we hope to avoid what the author identifies as a significant contemporary problem for individuals and cultures: that is, suppression or denial of intolerable states of feeling. The Mind's Affective Life will appeal to and inspire students and practitioners of philosophy, psychoanalysis, psychotherapy and women's studies. It will also be of great interest to anyone interested in the interaction of feeling and thinking. The Moral Animal Robert Wright, 1995-08-29 One of the most provocative science books ever published, a feast of great thinking and writing about the most profound issues there are. The New York Times Book Review: Fiercely intelligent, beautifully written and engrossingly original. The New York Times Book Review: Are men literally born to cheat? Does monogamy actually serve women's interests? These are among the questions that have made *The Moral Animal* one of the most provocative science books in recent years. Wright unveils the genetic strategies behind everything from our sexual preferences to our office politics as well as their implications for our moral codes and public policies. Illustrations **Nature's Mind** Michael S. Gazzaniga, 1992-11-10 The co-discoverer of the split brain theory tells how science is recasting the age-old question of nature versus nurture to create a startling new view of human behavior. While selection theory has revolutionized biology, its implications for psychology have barely been tapped. Now Gazzaniga, a distinguished behavioral scientist, reveals the radical implications of this powerful concept. Photos *Forthcoming Books* Rose Arny, 1997-04 *Understanding Early Civilizations* Bruce G. Trigger, 2003-05-05 This book offers the first detailed comparative study of the seven best documented early civilizations: ancient Egypt and Mesopotamia, Shang China, the Aztecs and adjacent peoples in the Valley of Mexico, the Classic Maya, the Inka, and the Yoruba. Unlike previous studies, equal attention is paid to similarities and differences in their sociopolitical organization, economic systems, religion, and culture. Many of this study's findings are surprising and provocative. Agricultural systems, technologies, and economic behaviour turn out to have been far more diverse than was expected. These findings and many others challenge not only current understandings of early civilizations but also the theoretical foundations of modern archaeology and anthropology. The key to understanding early civilizations lies not in their historical connections but in what they can tell us about similarities and differences in human behaviour. **Doing Without Adam and Eve**

Patricia A. Williams,2001-06-19 In this provocative new addition to the Theology and the Sciences series Patricia Williams assays the original sin doctrine with a scientific lens and based on sociobiology offers an alternative Christian account of human nature s foibles and future Focusing on the Genesis 2 and 3 account Williams shows how its historical interpretation in early Christianity not only misread the text but derived an idea of being human profoundly at odds with experience and contemporary science After gauging Christianity s several competing notions of human nature Protestant Catholic and Orthodox against contemporary biology Williams turns to sociobiological accounts of the evolution of human dispositions toward reciprocity and limited cooperation as a source of human good and evil From this vantage point she offers new interpretations of evil sin and the Christian doctrine of atonement Williams s work frank in its assessment of traditional misunderstandings challenges theologians and all Christians to reassess the roots and branches of this linchpin doctrine

Stone Age Present William Allman,1995-11-07 Have you ever wondered why men don t ask for directions Why we react with anger to infidelity Why we love music and art Why war and racism still thrive in our most sophisticated cultures In this fascinating synthesis of the disciplines of anthropology psychology linguistics philosophy and biology William Allman shows us how our minds have evolved in response to challenges faced by our prehistoric ancestors and reveals how our brains continue to harbor that legacy in the present day Scientists speculate that many of the problems of modern life from obesity to war arise because our Stone Age mind hasn t caught up with our technologically sophisticated world But Allman also reveals how morality rather than being the result of arbitrary convention is deeply rooted in our need to cooperate which has been essential to the survival of our species through its evolution **California Law Review** ,1999 *Nature* Sir Norman
