Nature's Music Peter R. Marler, Hans Slabbekoorn, 2004-11-17 The voices of birds have always been a source of fascination Nature s Music brings together some of the world s experts on birdsong to review the advances that have taken place in our understanding of how and why birds sing what their songs and calls mean and how they have evolved All contributors have strived to speak not only to fellow experts but also to the general reader The result is a book of readable science richly illustrated with recordings and pictures of the sounds of birds Bird song is much more than just one behaviour of a single particular group of organisms It is a model for the study of a wide variety of animal behaviour systems ecological evolutionary and neurobiological Bird song sits at the intersection of breeding social and cognitive behaviour and ecology As such interest in this book will extend far beyond the purely ornithological to behavioural ecologists psychologists and neurobiologists of all kinds The scoop on local dialects in birdsong How birdsongs are used for fighting and flirting The writers are all international authorities on their subject

The Science-Music Borderlands Elizabeth H. Margulis, Psyche Loui, Deirdre Loughridge, 2023-05-02 Interdisciplinary essays on music psychology that integrate scientific humanistic and artistic ways of knowing in transformative ways Researchers using scientific methods and approaches to advance our understanding of music and musicality have not yet grappled with some of the perils that humanistic fields concentrating on music have long articulated In this edited volume established and emerging researchers neuroscientists and cognitive scientists musicians historical musicologists and ethnomusicologists build bridges between humanistic and scientific approaches to music studies particularly music psychology Deftly edited by Elizabeth H Margulis Psyche Loui and Deirdre Loughridge The Science Music Borderlands embodies how sustained interaction among disciplines can lead to a richer understanding of musical life The essays in this volume provide the scientific study of music with its first major reckoning exploring the intellectual history of the field and its central debates while charting a path forward The Science Music Borderlands is essential reading for music scholars from any disciplinary background It will also interest those

working at the intersection of music and science such as music teachers performers composers and music therapists

of such extraordinary feats of mental prowess Birds are astonishingly intelligent creatures According to revolutionary new
research some birds rival primates and even humans in their remarkable forms of intelligence In The Genius of Birds
acclaimed author Jennifer Ackerman explores their newly discovered brilliance and how it came about As she travels around
the world to the most cutting edge frontiers of research Ackerman not only tells the story of the recently uncovered genius of
birds but also delves deeply into the latest findings about the bird brain itself that are shifting our view of what it means to be
intelligent At once personal yet scientific richly informative and beautifully written The Genius of Birds celebrates the
triumphs of these surprising and fiercely intelligent creatures Ackerman is also the author of Birds by the Shore Observing

understanding and appreciation of the biology and ecology of birds Aves the birds is the wildlife group that people most
frequently encounter With over 10 000 species worldwide these animals are part of our everyday experience They are also
the focus of intense research and their management and conservation is a subject of considerable effort throughout the world
But what are the defining attributes that make a bird a bird Aimed at undergraduate and graduate students Ornithology
provides a solid modern foundation for understanding the life and development of birds Written by renowned experts from
around the globe this comprehensive textbook draws on the latest research to create an innovative learning experience
Moving beyond bones muscle and feathers it provides the core information needed to build the bird linking anatomy and
physiology with ecology and behavior As it reviews the major orders of birds the book highlights their wide diversity and
critically evaluates ornithological concepts and theories Incorporating brief biographies of leaders in the field the text

The Evolving Animal Orchestra Henkjan Honing, 2019-03-05 A music researcher s quest to discover other musical species Even those of us who can t play a musical instrument or lack a sense of rhythm can perceive and enjoy music Research shows that all humans possess the trait of musicality We are a musical species but are we the only musical species Is our musical predisposition unique like our linguistic ability In *The Evolving Animal Orchestra* Henkjan Honing embarks upon a quest to discover if humans share the trait of musicality with other animals Charles Darwin believed that musicality was a capacity of all animals human and nonhuman with a clear biological basis Taking this as his starting point Honing a music cognition researcher visits a series of biological research centers to observe the ways that animals respond to music He has studied scientists accounts of Snowball the cockatoo who could dance to a musical beat and of Ronan the sea lion who was trained to move her head to a beat Now Honing will be able to make his own observations Honing tests a rhesus monkey for beat perception via an EEG performs a listening experiment with zebra finches considers why birds sing and if they intend their songs to be musical explains why many animals have perfect pitch and watches marine mammals respond to sounds He reports on the unforeseen twists and turns doubts and oversights that are a part of any scientific research and which point to as many questions as answers But as he shows us science is closing in on the biological and evolutionary source of our musicality

Communication in Humans and Other Animals Gisela Håkansson, Jennie Westander, 2013-06-27 Communication is a basic behaviour found across animal species Human language is often thought of as a unique system which separates humans from other animals This textbook serves as a guide to different types of communication and suggests that each is unique in its own way human verbal and nonverbal communication communication in nonhuman primates in dogs and in birds Research questions and findings from different perspectives are summarized and integrated to show students similarities and differences in the rich diversity of communicative behaviours A core topic is how young individuals proceed from not being able to communicate to reaching a state of competent communicators and the role of adults in this developmental process Evolutionary aspects are also taken into consideration and ideas about the evolution of human language are examined The cross disciplinary nature of

the book makes it useful for courses in linguistics biology sociology and psychology but it is also valuable reading for anyone interested in understanding communicative behaviour

Hollis Taylor, 2017-05-01 A ground breaking study of the songs of the pied butcherbird intellectually engaging and also very entertaining as a fieldwork memoir The Music Trust How and when does music become possible Is it a matter of biology or culture or an interaction between the two Revolutionizing the way we think about the core values of music and human exceptionalism Hollis Taylor takes us on an outback road trip to meet the Australian pied butcherbird Recognized for their distinct timbre calls and songs both sexes of this songbird sing in duos trios and even larger choirs transforming their flute like songs annually While birdsong has long inspired artists writers musicians and philosophers and enthralled listeners from all walks of life researchers from the sciences have dominated its study As a field musicologist Taylor spends months each year in the Australian outback recording the songs of the pied butcherbird and chronicling their musical activities She argues persuasively in these pages that their inventiveness in song surpasses biological necessity compelling us to question the foundations of music and confront the remarkably entangled relationship between human and animal worlds Equal parts nature essay memoir and scholarship *Is Birdsong Music* offers vivid portraits of the extreme locations where these avian choristers are found quirky stories from the field and an in depth exploration of the vocalizations of the pied butcherbird Hollis Taylor has given us one of the most serious books ever written on animal music *Is Birdsong Music* is so engaging that all who care about humanity s place on Earth should read it We are certainly not the only musicians on this planet David Rothenberg author of *Why Birds Sing*

Time Will Tell Mari Riess Jones, 2019 Attention is a central concept in psychology The term attention itself has persisted even though it implies a static insulated capacity that we use when it is necessary to focus upon some relevant or stimulating event Riess Jones presents a different way of thinking about attention one that describes it as a continuous activity that is based on energy fluctuating in time A majority of attention research fails to examine influence of event time structure i e a speech utterance on listeners moment to moment attending General research ignores listeners endowed with innate as well as acquired temporal biases Here attending is portrayed as a dynamic interaction of an individual within his or her surroundings Importantly this interaction involves synchronicity between an attender and external events This emphasis on time and synchronicity distinguishes the author s theory called Dynamic Attending Theory DAT from other approaches to attending which characterize attention metaphorically as a filter resource pool spotlight and so on Recent research from neuroscience has lent support to Riess Jones theory and the goal of this book is to bring this new research as well as her own to the wide audience of psychologists interested in attention more broadly

The Machines of Evolution and the Scope of Meaning
 Gary Tomlinson, 2023-02-28 A groundbreaking account of the origin and place of meaning in the earthly biosphere What is meaning How does it arise Where is it found in the world In recent years philosophers and scientists have answered these questions in different ways Some see meaning as a uniquely human achievement others extend it to trees microbes and even to the bonding of DNA and RNA molecules In this groundbreaking book Gary Tomlinson defines a middle path Combining emergent thinking about evolution new research on animal behaviors and theories of information and signs he tracks meaning far out into the animal world At the same time he discerns limits to its scope and identifies innumerable life forms including many animals and all other organisms that make no meanings at all Tomlinson's map of meaning starts from signs the fundamental units of reference or aboutness Where signs are at work they shape meaning laden lifeways offering possibilities for distinctive organism niche interactions and sometimes leading to technology and culture The emergence of meaning does not however monopolize complexity in the living world Countless organisms generate awe inspiring behavioral intricacies without meaning The Machines of Evolution and the Scope of Meaning offers a revaluation of both meaning and meaninglessness uncovering a foundational difference in animal solutions to the hard problem of life

Cognition, Evolution, and Behavior
 Sara J. Shettleworth, 2010-04-10 How do animals perceive the world learn remember search for food or mates communicate and find their way around Do any nonhuman animals count imitate one another use a language or have a culture What are the uses of cognition in nature and how might it have evolved What is the current status of Darwin's

claim that other species share the same mental powers as humans but to different degrees In this completely revised second edition of *Cognition Evolution and Behavior* Sara Shettleworth addresses these questions among others by integrating findings from psychology behavioral ecology and ethology in a unique and wide ranging synthesis of theory and research on animal cognition in the broadest sense from species specific adaptations of vision in fish and associative learning in rats to discussions of theory of mind in chimpanzees dogs and ravens She reviews the latest research on topics such as episodic memory metacognition and cooperation and other regarding behavior in animals as well as recent theories about what makes human cognition unique In every part of this new edition Shettleworth incorporates findings and theoretical approaches that have emerged since the first edition was published in 1998 The chapters are now organized into three sections Fundamental Mechanisms perception learning categorization memory Physical Cognition space time number physical causation and Social Cognition social knowledge social learning communication Shettleworth has also added new chapters on evolution and the brain and on numerical cognition and a new chapter on physical causation that integrates theories of instrumental behavior with discussions of foraging planning and tool using

Birdsong, Speech and Poetry Francesca Mackenney, 2022-09-22 In the long nineteenth century scientists discovered striking similarities between how birds learn to sing and how children learn to speak Tracing the science of birdsong as it developed from the ingenious experiments of Daines Barrington to the evolutionary arguments of Charles Darwin Francesca Mackenney reveals a legacy of thought which informs and consequently affords fresh insights into a canonical group of poems about birdsong in the Romantic and Victorian periods With a particular focus on the writings of Samuel Taylor Coleridge the Wordsworth siblings John Clare and Thomas Hardy her book explores how poets responded to an analogy which challenged definitions of language and therefore of what it means to be human Drawing together responses to birdsong in science music and poetry her distinctive interdisciplinary approach challenges many of the long standing cultural assumptions which have shaped and continue to shape how we respond to other creatures in the Anthropocene

Language, Music, and the Brain Michael A. Arbib, 2013-06-28 A presentation of music and language within an integrative embodied perspective of brain mechanisms for action emotion and social coordination This book explores the relationships between language music and the brain by pursuing four key themes and the crosstalk among them song and dance as a bridge between music and language multiple levels of structure from brain to behavior to culture the semantics of internal and external worlds and the role of emotion and the evolution and development of language The book offers specially commissioned expositions of current research accessible both to experts across disciplines and to non experts These chapters provide the background for reports by groups of specialists that chart current controversies and future directions of research on each theme The book looks beyond mere auditory experience probing the embodiment that links speech to gesture and music to dance The study of the brains of monkeys and songbirds illuminates hypotheses on the evolution of brain mechanisms that support music and language while the study of infants calibrates the developmental

timetable of their capacities The result is a unique book that will interest any reader seeking to learn more about language or music and will appeal especially to readers intrigued by the relationships of language and music with each other and with the brain Contributors Francisco Aboitiz Michael A Arbib Annabel J Cohen Ian Cross Peter Ford Dominey W Tecumseh Fitch Leonardo Fogassi Jonathan Fritz Thomas Fritz Peter Hagoort John Halle Henkjan Honing Atsushi Iriki Petr Janata Erich Jarvis Stefan Koelsch Gina Kuperberg D Robert Ladd Fred Lerdahl Stephen C Levinson Jerome Lewis Katja Liebal J natas Manzolli Bjorn Merker Lawrence M Parsons Aniruddh D Patel Isabelle Peretz David Poeppel Josef P Rauschecker Nikki Rickard Klaus Scherer Gottfried Schlaug Uwe Seifert Mark Steedman Dietrich Stout Francesca Stregapede Sharon Thompson Schill Laurel Trainor Sandra E Trehub Paul Verschure *Gazes, Words, and Silences in Pragmatics* Paola Pennisi, 2024-01-02 This book describes the role of eye contact in human communication by investigating the relationship between the eye gaze and the development of language and pragmatic skills The author reveals that although the need for eye contact is an innate human characteristic neurodevelopmental disorders can have adverse outcomes and delays in language and pragmatic skills A comparative approach compares childhood disorders that affect pragmatics in animal species that are phylogenetically related to humans with those species that are not This text appeals to students and researchers working in pragmatics and the philosophy of language *Avian Cognition* Carel ten Cate, Susan D. Healy, 2017-06-22 The cognitive abilities of birds are remarkable hummingbirds integrate spatial and temporal information about food sources day old chicks have a sense of numbers parrots can make and use tools and ravens have sophisticated insights in social relationships This volume describes the full range of avian cognitive abilities the mechanisms behind such abilities and how they relate to the ecology of the species Synthesising the latest research in avian cognition a range of experts in the field provide first hand insights into experimental procedures outcomes and theoretical advances including a discussion of how the findings in birds relate to the cognitive abilities of other species including humans The authors cover a range of topics such as spatial cognition social learning tool use perceptual categorization and concept learning providing the broader context for students and researchers interested in the current state of avian cognition research its key questions and appropriate experimental approaches Vocal Communication in Birds and Mammals Marc Naguib, Vincent Janik, Nicola Clayton, Klaus Zuberbühler, 2009-08-06 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This thematic volume Vocal Communication in Birds and Mammals makes another important contribution to the development of the field by presenting theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields *Vertebrate Sound Production and Acoustic Communication* Roderick A. Suthers, W. Tecumseh Fitch, Richard R. Fay, Arthur N. Popper, 2016-04-27 Although the fundamental principles of vocal production are well understood and are being increasingly applied by specialists to specific animal taxa they stem originally from engineering research on the human voice

These origins create a double barrier to entry for biologists interested in understanding acoustic communication in their study species. The proposed volume aims to fill this gap providing easy to understand overviews of the various relevant theories and techniques and showing how these principles can be implemented in the study of all main vertebrate groups. The volume will have eleven chapters assembled from the world's leading researchers at a level intelligible to a wide audience of biologists with no background in engineering or human voice science. Some will cover sound production in a particular vertebrate group others will address a particular issue such as vocal learning across vertebrate taxa. The book will highlight what is known and how to implement useful techniques and methodologies but will also summarize current gaps in the knowledge. It will serve both as a tutorial introduction for newcomers and a springboard for further research for all scientists interested in understanding animal acoustic signals.
