Guinness Book of World Records Norris McWhirter,1983 Athletic Enhancement, Human Nature and Ethics Jan Tolleneer,Sigrid Sterckx,Pieter Bonte,2012-12-09 The book provides an in depth discussion on the human nature concept from different perspectives and from different disciplines analyzing its use in the doping debate and researching its normative overtones The relation between natural talent and enhanced abilities is scrutinized within a proper conceptual and theoretical framework is doping to be seen as a factor of the athlete s dehumanization or is it a tool to fulfill his her aspirations to go faster higher and stronger Which characteristics make sports such a peculiar subject of ethical discussion and what are the both intrinsic and extrinsic moral dangers and opportunities involved in athletic enhancement This volume combines fundamental philosophical anthropological reflection with applied ethics and socio cultural and empirical approaches Furthermore guidelines will be presented to decision and policy makers on local national and international levels Zooming in on the intrinsic issue of what is valuable about our homo sapiens biological condition this volume devotes only scant attention to the specific issue of natural talent and why such talent is appreciated so differently than biotechnological origins of ability In addition specific aspects of sports such as its competitive nature and its direct display of bodily prowess provide good reason to single out the issue of natural athletic talent for sustained ethical scrutiny *Maxwell's Handbook for AACR2* Robert L. are increasingly viewed as irreconcilable and unrelated Bernhard Kuhn's study uncovers a previously ignored fundamental connection between autobiography and the natural sciences Examining the autobiographies and scientific writings of Rousseau Goethe and Thoreau as representative of their ages Kuhn challenges the now entrenched thesis of the two cultures Rather these three writers are exemplary in that their autobiographical and scientific writings may be read not as separate or even antithetical but as mutually constitutive projects that challenge the newly emerging boundaries between scientific and humanistic thought during the Romantic period Reading each writer's life stories and nature works side by side as they were written Kuhn reveals the scientific character of autobiographical writing while demonstrating the autobiographical nature of natural science He considers all three writers in the context of scientific developments in their own times as well as ours showing how each one marks a distinctive stage in the growing estrangement of the arts and sciences from the self-assured epistemic unity of Rousseau's time to the splintering of disciplines into competing ways of knowing under the pressures of specialization and professionalization during the late Romantic age of Thoreau His book thus traces an unfolding drama in which these writers and their contemporaries each situated in an intellectual landscape more fragmented than the last seek to keep together what modern culture is determined to break apart
