Also included is a history of naval aviation operations in World War I. **Fly Navy** Philip Kaplan, 2001. Harnessing the Sky Frederick Trapnell, Dana Trapnell Tibbitts, 2015-07-15. Harnessing the Sky is one of the last untold stories in 100 years of naval aviation. This biography of Vice Adm. Frederick M. Trapnell explores the legacy of the man who has been called the godfather of current naval aviation. A pilot of calculated courage, Trap entered the Navy when test pilots were more like stuntmen than engineers. Airplanes had not yet come into their own as weapons of war and they had an undeveloped role in the fleet. His vision and leadership shaped the evolution of naval aviation through its formative years and beyond. When the threat of war in 1940 raised an alarm over the Navy's deficiency in aircraft, especially fighters, Trap was appointed to lead the Flight Test Section to direct the development of all new Navy airplanes. He played a key role in expediting the evolution of the two superb fighters that came to dominate the air war against Japan: the Corsair and Hellcat. After World War II, Trap returned as commander of the Naval Air Test Center to lead the Navy through the challenges of transitioning to jets. Trap was not only the first U.S. Navy pilot to fly a jet but is also recognized for defining the operating requirements for carrier-based jet propelled aircraft. Over the course of two decades, Trap tested virtually every naval aircraft prototype and pioneered the philosophy and the methods of the engineering test pilot. He demanded comprehensive testing of each airplane in conditions and maneuvers it would face in wartime fleet operations. These innovations kept the Navy at the forefront of modern aviation and stand as an enduring legacy to the man who is regarded as the foremost test pilot in a century of naval aviation. Hero of the Air William Trimble, 2013-07-10. In this biography, William F. Trimble examines the pioneering work of Glenn Curtiss and his role in the origins of aviation in the U.S. Navy in the years up to and through World War I. A self-taught mechanic and inventor, Curtiss was a key figure in the development of the airplane during the early part of the century, and his contributions to aviation are well known. This book's careful examination of his partnership with the Navy breaks new ground in revealing significant new details of his contributions. Curtiss's links to the Navy came as a result of aviation advocates within the Navy, chief among them Captain Washington I. Chambers, who recognized that the Navy had

special requirements for airplanes and their operations and for aviators and their training Curtiss helped meet the special requirements of the service for aircraft particularly those with the potential for operating with naval vessels at sea or in conducting long distance flights over water He also was instrumental in training the first naval aviators Curtiss and the Navy continued their collaboration through World War I reaching a climax in 1919 with the first transatlantic flight of the famed Navy Curtiss NC flying boat This book addresses the broader implications of the Curtiss Navy collaboration in the context of the longstanding trend of government private cooperation in the introduction and development of new technologies It also explores the interactive dynamics of weapons procurement and technological change within a large and entrenched bureaucracy and helps lay to rest the persistent myth that the Navy resisted the introduction of aviation **To Be a U.S.**
