

# *GUIDANCE, NAVIGATION, AND CONTROL*

## *GUIDANCE*

*Aiming a spacecraft by controlling the direction of its rocket thrust at launch or any other time the rocket changes speed or direction.*

## *NAVIGATION*

*Getting from one place to another while in space. This often involves long periods of coasting and short bursts from small rockets to change course.*

## *CONTROL*

*Orienting a spacecraft in its three axes of rotation (changing the direction it 'faces'). This may be done to aim an antenna, correct course, or dock with another craft.*

National Aeronautics and Space Administration. Scientific and Technical Information Division, 1970      Integrated Design for Space Transportation System B.N. Suresh, K. Sivan, 2015-11-20 The book addresses the overall integrated design aspects of a space transportation system involving several disciplines like propulsion vehicle structures aerodynamics flight mechanics navigation guidance and control systems stage auxiliary systems thermal systems etc and discusses the system approach for design trade off analysis system life cycle considerations important aspects in mission management the risk assessment etc There are several books authored to describe the design aspects of various areas viz propulsion aerodynamics structures control etc but there is no book which presents space transportation system STS design in an integrated manner This book attempts to fill this gap by addressing systems approach for STS design highlighting the integrated design aspects interactions between various subsystems and interdependencies The main focus is towards the complex integrated design to arrive at an optimum robust and cost effective space transportation system The orbital mechanics of satellites including different coordinate frames orbital perturbations and orbital transfers are explained

For launching the satellites to meet specific mission requirements viz payload orbit design considerations giving step by step procedure are briefed The selection methodology for launch vehicle configuration its optimum staging and the factors which influence the vehicle performance are summarized The influence of external internal and dynamic operating environments experienced by the vehicle subsystems and the remedial measures needed are highlighted The mission design strategies and their influence on the vehicle design process are elaborated The various critical aspects of STS subsystems like flight mechanics propulsion structures and materials thermal systems stage auxiliary systems navigation guidance and control and the interdependencies and interactions between them are covered The design guidelines complexity of the flight environment and the reentry dynamics for the reentry missions are included The book is not targeted as a design tool for any particular discipline or subsystem Some of the design related equations or expressions are not attempted to derive from the first principle as this is beyond the scope of this book However the important analytical expressions graphs and sketches which are essential to provide in depth understanding for the design process as well as to understand the interactions between different subsystems are appropriately included

Design Methodologies for Space Transportation Systems Walter Edward Hammond, 2001 Annotation Design Methodologies for Space Transportation Systems is a sequel to the author's earlier text Space Transportation A Systems Approach to Analysis and Design Both texts represent the most comprehensive exposition of the existing knowledge and practice in the design and project management of space transportation systems and they reflect a wealth of experience by the author with the design and management of space systems The text discusses new conceptual changes in the design philosophy away from multistage expendable vehicles to winged reusable launch vehicles and presents an overview of the systems engineering and vehicle design process as well as systems trades and analysis Individual chapters are devoted to specific disciplines such as aerodynamics aerothermal analysis structures materials propulsion flight mechanics and trajectories avionics and computers and control systems The final chapters deal with human factors payload launch and mission operations safety and mission assurance The two texts by the author provide a valuable source of information for the space transportation community of designers operators and managers A companion CD ROM succinctly packages some oversized figures and tables resources for systems engineering and launch ranges and a compendium of software programs The computer programs include the USAF AIRPLANE AND MISSILE DATCOM CODES with extensive documentation COSTMODL for software costing OPGUID launch vehicle trajectory generator SUPERFLO a series of 11 programs intended for solving compressible flow problems in ducts and pipes found in industrial facilities and a wealth of Microsoft Excel spreadsheet programs covering the disciplines of statistics vehicle trajectories propulsion performance math utilities
