The Bone Readers

Claudio Tuniz, Richard Gillespie, Cheryl Jones, 2016-06-16 The Bone Readers are a dedicated group of scholars who study the earliest human remains: their chemistry and DNA, their extinct floral and faunal contemporaries and the geologic layers in which they were found. Their research leads them to theories about modern human origins that continually challenge conventional wisdom and cherished beliefs about Eve, Neanderthals, hobbits and the Bering Straits among others. Two leading Bone Readers and a science writer have penned a literate, authoritative summary of the current questions and the minefield of academic politics that surround it. Ideal for students in human origins or biological anthropology courses and a delightful read.

and its religious perceptions particularly were considered gifts from God injected into a previously created world of matter. By contrast all the contributors to this book accept an evolutionary account of life, mind and its religious dispositions. However they hold more divergent views on the relation of mind to body and brain, on the validity of those religious dispositions and on how far even Christ and his predicted Second Coming may be seen as aspects of the evolutionary process. The seventeen contributions are rewritten and extended versions of papers first delivered at the annual conference of the UK's Science and Religion Forum held at Canterbury Christ Church College in Sept 2007. Though most speakers were British, representatives from The Netherlands, Jordan, Zimbabwe and USA also contributed. Invited individual chapters consider the general pattern of evolutionary thought, arguing that it can make a major contribution to the maturation of theology; archeological evidence for the emergence of religion and the proposal that it was an inevitable phase in human evolution; the contribution of religious concepts to the development of our species and the question whether that provides any ground for accepting them as true; the unresolved debate whether mind is a separate entity from brain or a consequence of its activity; and the melding of paleo anthropology with theology to provide an integrated account of humanity and its culmination in Christ. Each of these papers is the subject of an individual expert response and they are all drawn together in an overview essay which concludes the first part of the book. The second, shorter part contains a selection from the papers contributed by registrants for the meeting. Their topics are: whether mathematics consists of truths discovered or thought forms developed by human minds; ecological awareness as an evolutionary development; the neurobiology of freewill and sin; an evolutionary perspective on holistic medicine; and the impressive fruitfulness of juxtaposing neurophysiological and biblical concepts of the human body/mind.

Before Farming, 2002 *Human Natures* Paul R. Ehrlich, 2001-12-31 Why do we behave the way we do? Biologist Paul Ehrlich suggests that although people share a common genetic code, these genes do not shout commands at us; at the very most they whisper suggestions. He argues that human nature is not so much the result of genetic coding; rather it is heavily influenced by cultural conditioning and environmental factors. With personal anecdotes, a well-written narrative and clear examples, *Human Natures* is a major work of synthesis and scholarship, as well as a valuable primer on genetics and evolution that makes complex scientific concepts accessible to lay readers.

Evolution of Mind, Brain, and Culture Gary Hatfield, Holly Pittman, 2013-04-19 *Evolution of Mind, Brain, and Culture* draws together studies in archaeology, anthropology, psychology, philosophy, genetics, neuroscience and environmental science to investigate the evolution of the human mind, the brain and the human capacity for culture.

Social Information Transmission and Human Biology Jonathan CK Wells, Simon Strickland, Kevin Laland, 2006-05-22 Recent research has emphasized that socially transmitted information may affect both the gene pool and the phenotypes of individuals and populations, and that an improved understanding of evolutionary issues is beneficial to those working towards the improvement of human health. In response to a growing interest across disciplines for information regarding the contribution of social behavior to a range of

biological outcomes Social Information Transmission and Human Biology connects the work of evolutionary theorists and those dealing with practical issues in human health and demographics Combining evolutionary models with biomedical research authors from various disciplines look at how human behavior influences health and how reproductive fitness sheds light on the processes that shaped the evolution of human behavior Both academic and medical researchers will find much useful insight in this text Handbook of Cognitive Archaeology Tracy B. Henley, Matt J. Rossano, Edward P.

Kardas, 2019-07-24 The remains that archaeologists uncover reveal ancient minds at work as much as ancient hands and for decades many have sought a better way of understanding those minds This understanding is at the forefront of cognitive archaeology a discipline that believes that a greater application of psychological theory to archaeology will further our understanding of the evolution of the human mind Bringing together a diverse range of experts including archaeologists psychologists anthropologists biologists psychiatrists neuroscientists historians and philosophers in one comprehensive volume this accessible and illuminating book is an important resource for students and researchers exploring how the application of cognitive archaeology can significantly and meaningfully deepen their knowledge of early and ancient humans This seminal volume opens the field of cognitive archaeology to scholars across the behavioral sciences Exploring Physical Anthropology: Lab Manual and Workbook, 4e Suzanne E Walker Pacheco, 2022-01-14 Exploring Physical Anthropology is a comprehensive full color lab manual intended for an introductory laboratory course in physical anthropology It can also serve as a supplementary workbook for a lecture class particularly in the absence of a laboratory offering This laboratory manual enables a hands on approach to learning about the evolutionary processes that resulted in humans through the use of numerous examples and exercises It offers a solid grounding in the main areas of an introductory physical anthropology lab course genetics evolutionary forces human osteology forensic anthropology comparative functional skeletal anatomy primate behavior paleoanthropology and modern human biological variation
