Regression Models of Monthly Water-level Change in and Near the Closed Basin Division of the San Luis Valley, South-central Colorado Kenneth R. Watts, 1995 Climate and Cultural Change in Prehistoric Europe and the Near East Peter F. Biehl, Olivier P. Nieuwenhuyse, 2016-11-23 The subject of climate change could hardly be more timely In *Climate and Cultural Change in Prehistoric Europe and the Near East* an interdisciplinary group of contributors examine climate change through the lens of new archaeological and paleo environmental data over the course of more than 10 000 years from the Near East to Europe Key climatic and other events are contextualized with cultural changes and transitions for which the authors discuss when how and if changes in climate and environment caused people to adapt move or perish More than this publication of crucial archaeological and paleo environmental data however the volume seeks to understand the social political and economic significance of climate change as it was manifested in various ways around the Old World Contrary to perceptions of threatening global warming in our popular media and in contrast to grim images of collapse presented in some archaeological discussions of past climate change this book rejects outright societal collapse as a likely outcome Yet this does not keep the authors from considering climate change as a potential factor in explaining culture change by adopting a critical stance with regard to the long standing practice of equating synchronicity with causality and explicitly considering alternative explanations Historical Changes in Precipitation and Streamflow in the U.S. Great Lakes Basin, 1915-2004 Glenn Hodgkins, Robert W. science security studies jihadism jihadi discourse al Qaida Islamic State and Salafism as well as practitioners and decision makers in government agencies who wish to understand how transnational jihadi discourse has developed over the previous two decades

Effects of Past Global Change on Life Panel on Effects of Past Global Change on Life, Commission on Geosciences, Environment and Resources, Division on Earth and Life Studies, National Research Council, 1995-01-15 What can we expect as global change progresses Will there be thresholds that trigger sudden shifts in environmental conditions or that cause catastrophic destruction of life *Effects of Past Global Change on Life* explores what earth scientists are learning about the impact of large scale environmental changes on ancient life and how these findings may help us resolve today's environmental controversies Leading authorities discuss historical climate trends and what can be learned from the mass extinctions and other critical periods about the rise and fall of plant and animal species in response to global change The volume develops a picture of how environmental change has closed some evolutionary doors while opening others including profound effects on the early members of the human family An expert panel offers specific recommendations on expanding research and improving investigative tools and targets historical periods and geological and biological patterns with the most promise of shedding light on future developments This readable and informative book will be of special interest to professionals in the earth sciences and the environmental community as well as concerned policymakers
