Holomorphic Vector Fields on Compact Kähler Manifolds Yoz Matsushima, 1971-12-31 The Geometry of Meaning Peter Gardenfors, 2017-02-24 A novel cognitive theory of semantics that proposes that the meanings of words can be described in terms of geometric structures In *The Geometry of Meaning* Peter Gardenfors proposes a theory of semantics that bridges cognitive science and linguistics and shows how theories of cognitive processes in particular concept formation can be exploited in a general semantic model He argues that our minds organize the information involved in communicative acts in a format that can be modeled in geometric or topological terms in what he terms conceptual spaces extending the theory he presented in an earlier book by that name Many semantic theories consider the meanings of words as relatively stable and independent of the communicative context Gardenfors focuses instead on how various forms of communication establish a system of meanings that becomes shared between interlocutors He argues that these meetings of mind depend on the underlying geometric structures and that these structures facilitate language learning Turning to lexical semantics Gardenfors argues that a unified theory of word meaning can be developed by

using conceptual spaces He shows that the meaning of different word classes can be given a cognitive grounding and offers semantic analyses of nouns adjectives verbs and prepositions He also presents models of how the meanings of words are composed to form new meanings and of the basic semantic role of sentences Finally he considers the future implications of his theory for robot semantics and the Semantic Web **An American Dictionary of the English Language** Noah Webster,1835 **Neues und vollständiges deutsch-englisches Wörterbuch** Carl Gottlob Küttner,1813
