Political Science Stephen L. Wasby, 1970 Political Science: the Discipline and Its Dimensions Stephen L. Wasby, William Chandler Baum, 1970 Comparative Politics J. C. Johari, 1982 **Handbook of Black Studies** Molefi Kete Asante, Maulana Karenga, 2006 Publisher Description , **International Policy Studies** Stuart S. Nagel, David Rosenblum, 2000 The basic elements of this book involve integrating five policy problems and four fields of knowledge The five policy problems are economic technology social political and legal The four developing regions are Africa Asia Eastern Europe and Latin America The four fields of knowledge are natural science social science humanities and law Words Like Colored Glass Daniel K Berman, 2019-03-15 A study of the contribution of the Press to the democratization process in Taiwan Combining ideas from political science communication theory and Chinese studies the author challenges conventional wisdom on the subject **Creative Marginality** Mattei Dogan, 2019-06-03 Tracing the nine formal social science disciplines political science sociology economics history anthropology philosophy geography psychology and linguistics through their cycles of growth specialization fragmentation and hybridization Dogan and Pahre reject the notion of catch all interdisciplinary research They set out to demon The University and Its Disciplines Carolin Kreber, 2010-07-15 University teaching and learning take place within ever more specialized disciplinary settings each characterized by its unique traditions concepts practices and procedures It is now widely recognized that support for teaching and learning needs to take this discipline specificity into account However in a world characterized by rapid change complexity and uncertainty problems do not present themselves as distinct subjects but increasingly within trans disciplinary contexts calling for graduate outcomes that go beyond specialized knowledge and skills This ground breaking book highlights the important interplay between context specific and context transcendent aspects of teaching learning and assessment It explores critical questions such as What are the ways of thinking and practicing characteristic of particular disciplines How can students be supported in becoming participants of particular disciplinary discourse communities Can the diversity in teaching learning and assessment practices that we observe across departments be attributed exclusively to disciplinary structure To what extent do the disciplines prepare students for the complexities and uncertainties that characterize their later professional civic and personal lives Written for university teachers educational developers as well as new and experienced researchers of Higher Education this highly anticipated first edition offers innovative perspectives from leading Canadian US and UK scholars on how academic learning within particular disciplines can help students acquire the skills abilities and dispositions they need to succeed academically and also post graduation Carolin Kreber is Professor of Teaching and Learning in Higher Education and the Director of the Centre for Teaching Learning and Assessment at the University of Edinburgh

Becoming a Social Science Researcher Bruce Parrott,2023-03-28 Becoming a Social Science Researcher is designed to help aspiring social scientists including credentialed scholars understand the formidable complexities of the research process Instead of explaining specific research techniques it concentrates on the philosophical sociological and psychological dimensions of social research These dimensions have received little coverage in guides written for social science researchers but they are arguably even more important than particular analytical techniques Truly sophisticated social science scholarship requires that the researcher understand the intellectual and social contexts in which they collect and interpret information While social science training in US graduate schools has become more systematic over the past two decades with numerous publications aimed at instruction training and guidance still fall short in addressing the fundamental needs of this field

Black Women in Politics Michael Mitchell,2017-09-29 The research included in this volume examines the competing pressures felt by black women as political agents in the domains of elections public policy and social activism Their challenges and initiatives are explored in public spaces institutional behaviours and public policy The volume features cutting edge research exploring black women s political engagement The first group of contributors interrogates the treatment of black women within the discipline of political science The second group examines the relationship between cultural politics and policymaking The third and final group outlines the politics of race gendered identity and black feminist practice Black Women in Politics includes chapters on black leadership radical versus moderate politics in New Orleans and the Shelby vs Holder Supreme Court decision The editors introduce a new series highlighting trends in black politics Finally the work notes the passing of William Nick Nelson and Hanes Walton Jr prominent members of the National Conference of Black Political Scientists

Embodied Power Mary Hawkesworth,2016-04-28 Embodied Power explores dimensions of politics seldom addressed in political science illuminating state practices that produce hierarchically organized groups through racialized gendering despite guarantees of formal equality Challenging disembodied accounts of citizenship the book traces how modern science and law produce race gender and sexuality as purportedly natural characteristics masking their political genesis Taking the United States as a case study Hawkesworth demonstrates how diverse laws and policies concerning civil and political rights education housing and welfare immigration and securitization policing and criminal justice create finely honed hierarchies of difference that structure the life prospects of men and women of particular races and ethnicities within and across borders In addition to documenting the continuing operation of embodied power across diverse policy terrains the book investigates complex ways of seeing that render raced gendered relations of domination and subordination invisible From common assumptions about individualism and colorblind perception to disciplinary norms such

as methodological individualism methodological nationalism and abstract universalism problematic presuppositions sustain mistaken notions concerning formal equality and legal neutrality that allow state practices of racialized gendering to escape detection with profound consequences for the life prospects of privileged and marginalized groups Through sustained critique of these flawed suppositions Embodied Power challenges central beliefs about the nature of power the scope of state action and the practice of liberal democracy and identifies alternative theoretical frameworks that make racialized gendering visible and actionable Key Features Demonstrates how understandings of politics change when the experiences of men and women of diverse classes races and ethnicities are placed at the center of analysis Explains why race neutral and gender neutral policies fail to eliminate entrenched inequalities Shows how accredited methods in political science and the social sciences more generally mask state practices that create and sustain racial and gender inequality Traces how mistaken notions of biological determinism have diverted attention from political processes of racialization gendering and sexualization Argues that the intersecting categories of race class gender and sexuality are essential to all subfields of political science if contemporary power is to be studied systematically

The Structure of Interdisciplinary Science Rolf

Hvidtfeldt, 2018-06-25 This book presents a novel approach to the analysis of interdisciplinary science based on the contemporary philosophical literature on scientific representation The basic motivation for developing this approach is that epistemic issues are insufficiently dealt with in the existing literature on interdisciplinarity This means that when interdisciplinary science is praised as it often is it is far from clear to what extent this praise is merited at least if one cares about various more or less standardised measures of scientific quality To develop a more adequate way of capturing what is going on in interdisciplinary science the author draws inspiration from the rich philosophical literature on modelling idealisation perspectivism and scientific pluralism The discussion hereof reveals a number of critical pitfalls related to transferring mathematical and conceptual tools between scientific contexts which should be relevant and interesting for anyone actively engaged in funding evaluating or carrying out interdisciplinary science
