Real Time Database Systems Issues And Applications:

Real-Time Database Systems Azer Bestavros, Kwei-Jay Lin, Sang Hyuk Son, 2012-10-10 Despite the growing interest in Real Time Database Systems there is no single book that acts as a reference to academics professionals and practitioners who wish to understand the issues involved in the design and development of RTDBS Real Time Database Systems Issues and Applications fulfills this need This book presents the spectrum of issues that may arise in various real time database applications the available solutions and technologies that may be used to address these issues and the open problems that need to be tackled in the future With rapid advances in this area several concepts have been proposed without a widely accepted consensus on their definitions and implications To address this need the first chapter is an introduction to the key RTDBS concepts and definitions which is followed by a survey of the state of the art in RTDBS research and practice The remainder of the book consists of four sections models and paradigms applications and benchmarks scheduling and concurrency control and experimental systems The chapters in each section are contributed by experts in the respective areas Real Time Database Systems Issues and Applications is primarily intended for practicing engineers and researchers working in the growing area of real time database systems For practitioners the book will provide a much needed bridge for technology transfer and continued education For researchers this book will provide a comprehensive reference for well established results This book can also be used in a senior or graduate level course on real time systems real time database systems and database systems or closely related courses *Real-Time Database Systems* Pedro Mejia Alvarez, Ricardo J. Zavaleta Vazquez, Susana Ortega Cisneros, Raul E. Gonzalez Torres, 2023-11-08 This book provides an overview of both experimental and commercial real time database systems RTDBs and a systematic approach to understanding designing and implementing them To this end the book is composed of four chapters Chapter 1 An Overview of Real Time Database Systems delves into the realm of RTDBs and discusses the specific requirements transaction models and scheduling algorithms that set RTDBs apart from conventional DBMs Chapter 2 on Experimental Real Time Databases presents various experimental RTDBs developed in academia with their architectures features and implementations while chapter 3 on Commercial Real Time Databases does so for systems developed and offered by commercial vendors as products or services Eventually chapter 4 on Applications of Real Time Database Systems showcases various applications of RTDBs across different domains This book will help researchers graduate students and advanced professionals to get an overview of the area and to understand the main challenges and systems available **Active and Real-Time Database Systems (ARTDB-95)** Mikael Berndtsson, Jörgen Hansson, 2012-12-06 The areas of active and real time databases have seen a tremendous growth of interest in the past few years particularly with regard to their support of time critical and embedded applications ARTDB 95 provided therefore an important forum for researchers from both communities to discuss research results and also to chart new directions for the future As well as the 11 submitted papers presented at the workshop this volume also contains 4

invited papers on the following topics the impact of active databases on commercial practice the optimization of active database transactions the need for better language compiler and tool support for real time databases and the origin of time constraints associated with data events and actions Together the papers give a comprehensive overview of current research and will provide invaluable reading for academic and industrial researchers and students at both undergraduate and postgraduate level

Real-Time Database Systems Kam-Yiu Lam, Tei-Wei Kuo, 2006-04-18 In recent years tremendous research has been devoted to the design of database systems for real time applications called real time database systems RTDBS where transactions are associated with deadlines on their completion times and some of the data objects in the database are associated with temporal constraints on their validity Examples of important applications of RTDBS include stock trading systems navigation systems and computer integrated manufacturing Different transaction scheduling algorithms and concurrency control protocols have been proposed to satisfy transaction timing data temporal constraints Other design issues important to the performance of a RTDBS are buffer management index accesses and I O scheduling Real Time Database Systems Architecture and Techniques summarizes important research results in this area and serves as an excellent reference for practitioners researchers and educators of real time systems and database systems

of these the programme committee selected 103 to be presented DEXA 99 took place in Florence and was the tenth conference in the series following events in Vienna Berlin Valencia Prague Athens London Zurich Toulouse and Vienna The decade has seen many developments in the areas covered by DEXA developments in which DEXA has played its part I would like to express thanks to all the institutions which have actively supported and made possible this conference namely University of Florence Italy IDG CNR Italy FAW University of Linz Austria Austrian Computer Society DEXA Association In addition we must thank all the people who have contributed their time and effort to make the conference possible Special thanks go to Maria Schweikert Technical University of Vienna M Neubauer and G Wagner FAW University of Linz We must also thank all the members of the programme committee whose careful reviews are important to the quality of the conference

Databases in Telecommunications II Willem Jonker, 2003-06-30 Just like the previous workshop at VLDB 1999 in Edinburgh the purpose of this workshop is to promote telecom data management as one of the core research areas in database research and to establish a strong connection between the telecom and database research communities As I wrote in the preface of those proceedings data management in telecommunications is an interesting area of research given the fact that both service management and service provisioning are very data intensive and pose extreme requirements on data management technology Given the feedback on the previous workshop we decided to keep the same program set up for this workshop an invited speaker a collection of research papers and a panel discussion We received 18 good quality papers from which we selected 12 to construct a very interesting program The program has been divided into four sections The first section focuses on CDR data warehouse and data mining technology Data warehousing and data mining around customer usage data remains an important area of interest for telecommunication operators The growing competition especially in the mobile market means that operators have to put more effort into customer retention and satisfaction The second section focuses on performance issues around databases in telecommunication Since telecommunication databases are characterized by their extreme requirements for example in terms of volumes of data to be processed or response times high volume data management and embedded and real time data management are key aspects of the telecommunication data management problems in today's operational environments
