Since 1998 RAID has established its reputation as the main event in research on intrusion detection both in Europe and the United States. Every year RAID gathers researchers, security vendors, and security practitioners to listen to the most recent research results in the area as well as experiments and deployment issues. This year RAID has grown one step further to establish itself as a well known event in the security community with the publication of hardcopy proceedings. RAID 2000 received 26 paper submissions from 10 countries and 3 continents. The program committee selected 14 papers for publication and examined 6 of them for presentation. In addition, RAID 2000 received 30 extended abstracts. 15 of these extended abstracts were accepted for presentation. Tended abstracts are available on the website of the RAID symposium series: <http://www.raid-symposium.org>. We would like to thank the technical program committee for the help we received in reviewing the papers as well as all the authors for their participation and submissions, even for those rejected. As in previous RAID symposiums, the program alternates between fundamental research issues such as new technologies for intrusion detection and more practical issues linked to the deployment and operation of intrusion detection systems in a real environment. Five sessions have been devoted to intrusion detection technology, including modeling, data mining, and advanced techniques.

On behalf of the program committee, it is our pleasure to present to you the proceedings of the fourth Recent Advances in Intrusion Detection Symposium. The RAID 2001 program committee received 55 paper submissions from 13 countries. All submissions were carefully reviewed by several members of the program committee on the criteria of scientific novelty, importance to the field, and technical quality. Final selection took place at a meeting held on May 16-17 in Oakland, California. Twelve papers were selected for presentation and publication in the conference proceedings. In addition, nine papers presenting work in progress were selected for presentation. The program included both fundamental research and practical issues: logging and IDS integration, attack modeling, anomaly detection, specification-based IDS, IDS assessment, IDS cooperation, intrusion tolerance, and legal aspects. RAID 2001 also hosted two panels: one on The Present and Future of IDS Testing Methodologies, a subject of major concern for all IDS users and designers, and one on Intrusion Tolerance, an emerging research area of increasing importance. Dr. Bill Hancock, Senior Vice President and Chief Security Officer of Exodus Communications Inc., delivered a keynote speech: Real world intrusion detection or how not to become a deer in the headlights of an attacker's car on the information superhighway. The slides presented by the authors of the 9 papers which are not in the proceedings, and the slides presented by the panelists, are available on the website of the RAID symposium series: <http://www.raid-symposium.org>.
