advanced neuroimaging techniques to study brain growth and to diagnose diseases and malformations in neonates infants
toddlers children and adolescents Recent technical and methodological developments and the use of artificial intelligence AI
has improved the field of pediatric neuroradiology resulting in enhanced diagnostic care personalized treatments and better
patient outcomes Pediatric neuroradiology plays a key role in diagnosing characterizing and monitoring the progression of
neurological disorders in children A wide variety of imaging techniques including magnetic resonance imaging MRI
computed tomography CT and ultrasound US are employed for the evaluation of conditions common among children One of
the most challenging aspects of pediatric neuroradiology is the need for age specific considerations for processing and
interpreting imaging exams in relation to different age groups due to the dynamic and ongoing development of the brain
from neonacy to adolescence This requires knowledge of early developing patterns in neurotypical subjects and development
