Recent Developments In Insect Neurohormones:

Recent Developments in Insect Neurohormones M. Raabe, 2012-12-06 The most striking fact revealed by investigations of insect neurohormones is that insects are as well supplied with neurohormones as mammals since neurohormones regulate not only the functioning of the endocrine glands prothoracic gland and corpora allata but also most physiological processes Our knowledge of neurohormones developed originally from anatomocytological investigations and experimental studies Today accurate bio assays have been devised for studying both in vivo and in vitro physiological processes and RIA determination has yielded knowledge of titer modifications of humoral factors Much is also known about neurohormone purification and several neurohormones have even been identified in different species Immunocytochemistry has made it possible to demonstrate in their origin and release sites the presence of insect neurohormones whose structure has been elucidated Moreover the presence of vertebrate and invertebrate neuropeptides has been demonstrated in insects As regards biogenic amines methods of detection have been greatly refined and it is now possible to identify the cell bodies and axons of the main biogenic amines Other new methods such as cobalt chloride impregnation or Lucifer yellow staining have revealed the axonal pathways and the location of particular neurons The mechanisms of action of neurohormones have been investigated in several cases and the results of these investigations will be related in the chapters which follow

students a well balanced treatment of all major areas in entomology This edition features coverage of the new phylogenies for most of the insect orders Endocrinology II G. A. Kerkut, 2013-10-22 Endocrinology II concerns the actions of hormones in insects complementing Volume 7 which is concerned with the production and chemistry of insect hormones While the preceding volume is directed mainly towards the insect endocrinologist this volume has much of intrinsic interest to the general physiologist It deals with the regulation of metabolism reproduction cuticle properties and certain aspects of behaviour from a systems point of view and amply documents how hormones have provided basic insights into the functioning of such systems Interference in endocrine regulation could provide future systems for insect control and this volume will provide the foundation on which the future formulation of these strategies is based More information on diverse aspects of insect hormone action is brought together here than in any previous single work and this volume will therefore be a valuable reference source for many years to come Agriculture, Rural Development, and Related Agencies Appropriations for Fiscal Year 1992 United States.
