End of an Era

- The Mesozoic Era ended about 65 million years ago with a major extinction of land and marine species.
- Many paleontologists hypothesize that a comet or asteroid collided with Earth, causing a huge cloud of dust and smoke to rise in the atmosphere, blocking out the Sun.

New Earth Histories Alison Bashford, Emily M. Kern, Adam Bobbette, 2023-11-06 A kaleidoscopic rethinking of how we come to know the earth This book brings the history of the geosciences and world cosmologies together exploring many traditions including Chinese Pacific Islamic South and Southeast Asian conceptions of the earth's origin and makeup Together the chapters ask How have different ideas about the sacred animate and earthly changed modern environmental sciences How have different world traditions understood human and geological origins How does the inclusion of multiple cosmologies change the meaning of the Anthropocene and the global climate crisis By carefully examining these questions New Earth Histories sets an ambitious agenda for how we think about the earth The chapters consider debates about the age and structure of the earth how humans and earth systems interact and how empire has been conceived in multiple traditions The methods the authors deploy are diverse from cultural history and visual and material studies to ethnography geography and Indigenous studies and the effect is to highlight how earth knowledge emerged from historically specific situations New Earth Histories provides both a framework for studying science at a global scale and fascinating examples to educate as well as inspire future work Essential reading for students and scholars of earth science history environmental humanities history of science and religion and science and empire

Earth's Deep History Martin J. S. Rudwick, 2014-10-15 Tells the story of how natural philosophers developed the ideas of geology accepted today Fascinating San Francisco Book Review Earth has been witness to dinosaurs global ice ages continents colliding or splitting apart and comets and asteroids crashing as well as the birth of humans who are curious to understand it But how was all this discovered How was the evidence for it collected and interpreted In this sweeping and accessible book Martin J S Rudwick the premier historian of the Earth sciences tells the gripping human story of the gradual realization that the Earth's history has not only been long but also astonishingly eventful Rudwick begins in the seventeenth century with Archbishop James Ussher who famously dated the creation of the cosmos to 4004 BC His narrative later turns to the late eighteenth and early nineteenth centuries when geological evidence was used and is still being used to reconstruct a history of the Earth that is as varied and unpredictable as human history itself Along the way Rudwick rejects the popular view of this story as a conflict between science and religion and shows how the modern scientific account of the Earth's deep history retains strong roots in Judeo Christian ideas Extensively illustrated Earth's Deep History is an engaging and impressive capstone to Rudwick's distinguished career Deftly explains how ideas of natural history were embedded in cultural history Nature An engaging read for nonscientists and specialists alike Library Journal Wonderfully erudite and absorbing Times Literary Supplement Fascinating well written and novel Essential Choice Thrilling London Review of Books

Biodiversity and Earth History Jens Boenigk, Sabina Wodniok, Edvard Glücksman, 2015-03-31

This uniquely interdisciplinary textbook explores the exciting and complex relationship between Earth's geological history and the biodiversity of life. Its innovative design provides a seamless learning experience, clarifying major concepts step by step with detailed textual explanations complemented by detailed figures, diagrams, and vibrant pictures. Thanks to its layout, the respective concepts can be studied individually as part of the broader framework of each chapter or as they relate to the book as a whole. It provides in-depth coverage of Earth's formation and subsequent geological history, including patterns of climate change and atmospheric evolution. The early stages of life, from microbial primordial soup theories to the fossil record's most valuable contributions, are explored. Mechanisms of mutual influence between living organisms and the environment, how life changed Earth's history, whilst at the same time environmental pressures continue to shape the evolution of species, are discussed. Basic ideas in biodiversity studies, species concepts, measurement techniques, and global distribution patterns are covered. Biological systematics, from their historical origins in Greek philosophy and Biblical stories to Darwinian evolution by natural selection and to phylogenetics based on cutting-edge molecular techniques, are explored. This book's four major sections offer a fresh cross-disciplinary overview of biodiversity and the Earth's history. Among many other concepts, they reveal the massive diversity of eukaryotes, explain the geological processes behind fossilisation, and provide an eye-opening account of the relatively short period of human evolution in the context of Earth's 4.6 billion-year history. Employing a combination of proven didactic tools, the book is simultaneously a reading reference, illustrated guide, and encyclopaedia of organismal biology and geology. It is aimed at school and university-level students as well as members of the public fascinated by the intricate interrelationship of living organisms and their environment.

250 Million Years of Earth History in Central Italy Christian Koeberl, David M. Bice, 2019-11-04. The Umbria-Marche Apennines are entirely made of marine sedimentary rocks representing a continuous record of the geotectonic evolution of an epeiric sea from the Early Triassic to the Pleistocene. The book includes reviews and original research works accomplished with the support of the Geological Observatory of Coldigioco.

Contesting Earth's History in Transatlantic Literary Culture, 1860-1935 Richard Fallon, 2025-02-14. By the mid-nineteenth century, geologists and palaeontologists had reconstructed an authoritative narrative of Earth's deep history from the planet's molten origins to the rise of humanity. Many figures in transatlantic science across subsequent decades, however, had problems with this narrative: it was too secular, inhuman, and evolutionary, or controlled too exclusively by elite scientists. Speaking from palaeoscience's unevenly professionalized and controversy-racked borders, Christian fundamentalists, charismatic psychics, and respected scholars alike voiced their objections. Until now, no study has brought their work together for detailed comparative analysis. Spanning from the 1860s to the interwar decades, *Contesting Earth's History* examines the fascinating stories of five significant examples of fringe or borderline palaeoscience: old and young earth creationism, hollow earth theory, clairvoyant time travel, and sunken continent catastrophism. Innovatively combining methods from literary studies with the history of science, this book attends not just to the conceptual content of these strange sciences but also to their proponents.

communication of truth claims through diverse genres ranging from the scientific textbook and the technical monograph to the lost world romance and the epic poem. By paying close attention to the hitherto overlooked textual forms and literary strategies of these works of pseudoscience, this volume throws into relief the variant conceptions of audience, evidence, and method that jostled and competed in wider scientific culture during this period. It also demonstrates that for all their diversity, authors of borderline palaeoscience shared the desire to shift the balance of power, creating textual spaces where exclusive hierarchies of scientific expertise could be levelled away. These conjurors of lost worlds often captivated wide audiences, and many of their bizarre, astonishing, and iconoclastic ideas remain with us to this day. Some even inspired early science fiction, by the likes of H. P. Lovecraft and Edgar Rice Burroughs. Hijacking geologists and palaeontologists' longstanding effort at making the prehistoric past visible, authors on the borderlines of palaeoscience asserted their right to scientific authority and encouraged readers to gaze into time's abyss with bold new eyes.

Earth System: History and Natural Variability -

Volume II Vaclav Cilek, 2009-07-15. Earth System History and Natural Variability theme is a component of Encyclopedia of Natural Resources Policy and Management in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty-one Encyclopedias. The Theme on Earth System History and Natural Variability, with contributions from distinguished experts in the field, presents a description of the cosmic environment around our planet influencing the Earth in a number of ways through variation of solar energy or meteorite impacts. The structure of the Earth and its rocks, waters, and atmosphere is described. The Theme focuses on geological and evolutionary processes through the history of Earth's epochs and biomes since the Early Earth to the Quaternary. The unifying processes between the Earth's life and its rocks, waters, and atmosphere are global natural cycles of carbon, sulfur, and other elements that connect and influence the rate of geological processes, climate change, biological evolution, and human economy. These five volumes are aimed at the following five major target audiences: University and College students, Educators, Professional practitioners, Research personnel, and Policy analysts, managers, and decision makers, and NGOs.

The New Cambridge History of the Bible:

Volume 4, From 1750 to the Present John Riches, 2015-04-13. This volume examines the Bible's role in the modern world, beginning with a treatment of its production and distribution that discusses publishers, printers, text critics, and translators, and continuing with a presentation of new methods of studying the text that have emerged, including historical, literary, social, scientific, feminist, postcolonial, liberal, and fundamentalist readings. There is a full discussion of the changes in understandings of and approaches to the Bible in various faith communities. The dissemination of the Bible throughout the globe has also produced a host of new interpretations, and this volume provides a comprehensive geographical survey of its reception. In the final chapters, the authors offer a thematic overview of the Bible in relation to literature, art, film, science, and other disciplines. They demonstrate that in spite of challenges to the Bible's authority in western Europe, it remains highly relevant and influential, not least in the Americas, Africa, and Asia.
