Rural Analysis and Management Francisco J. Tapiador, 2007-09-28 This handbook possesses two virtues that are becoming increasingly difficult to find together The first one is providing a novel and original scheme to analyze the rural areas of the planet in the context of Earth sciences The handbook is so original in its plan that it actually defines what modern rural science is The scheme followed albeit new is rooted in a venerable geographical tradition and presents a sensible balance between the academic and the applied viewpoints This novel way of studying rural areas represents by itself a valuable contribution to this complex field The second virtue of the book is the ability of synthesizing the most important aspects of the issues tackled and there are many issues this book tackles from physical to human geography and from deontology to matrix algebra When writing a handbook in such a vast field as rural science it is indeed tempting to accumulate meaningless information assisted by the wealth of available online information On the other side the danger of forgetting essential aspects is always present None of these problems seems to have affected the making

of this book The pictures and tables always have a place the text never loses its coherence and no comment seems superfluous Also the ambitious scope of the book is seemingly effortlessly solved by a rational clear and logical scheme that dissects all the relevant issues up to the required point

Geography And Development Arthur Morris, 2005-08-15 First published in 1998 Written in a highly accessible style this book examines economic development processes across the world The old certainties of what constitutes development and whether it is the same for all peoples no longer exist Goals once imposed by agencies like the World Bank are increasingly questioned and the spatial development planning characteristics of the 1960s and 70s is increasingly seen as an intrusion into free and competitive markets Indeed a question now being asked is should development be promoted at all This book examines these fundamental issues and presents and evaluates the different theoretical approaches to development Each country has its own tale to tell and by using valuable case study material the author shows how different policies have impacted on the geography of regions Processes of development in the newly industrialised countries NICs of South Korea and Singapore are examined as well as the flexible specialisation model characteristic of many Mediterranean countries and the post industrial service economies based on high technology The book argues convincingly that the fundamental spatial and temporal patterns of development in modern times are no longer the importance of physical resources but the complex human resources and the determination to work Anchored firmly in the needs of students this book will be widely welcomed by undergraduates taking courses in human geography and development studies

Postmodern Geographies Edward W. Soja, 1989 Written by one of America s foremost geographers Postmodern Geographies contests the tendency still dominant in most social science to reduce human geography to a reflective mirror or as Marx called it an unnecessary complication Beginning with a powerful critique of historicism and its constraining effects on the geographical imagination Edward Soja builds on the work of Foucault Berger Giddens Berman Jameson and above all Henri Lefebvre to argue for a historical and geographical materialism a radical rethinking of the dialectics of space time and social being Soja charts the respatialization of social theory from the still unfolding encounter between Western Marxism and modern geography through the current debates on the emergence of a postfordist regime of flexible accumulation The postmodern geography of Los Angeles exposed in a provocative pair of essays serves as a model in his account of the
