Regional Opportunities For Sustainable Development Theory Methods And Applications:

Opportunities for Sustainable Development Cornelis Johannes Maria Musters, Hendricus Johannes de Graf, 1998

Regional Opportunities for Sustainable Development H.J. de Graaf, C.J. Musters, W.J. Ter Keurs, 2013-04-18 By their adoption of Agenda 21 most of the world's governments have acknowledged the need for sustainable development. This implies that new policies are needed focusing on economic, social, cultural, and ecological goals. At the same time we also need to solve existing environmental and social problems and prevent the occurrence of new ones. This volume presents tests and illustrates a theoretically well-founded procedure for discovering regional opportunities for sustainable development based on a systems approach to decision making. The procedure takes as its starting point the needs of the people involved, relating these to the measurement of available resources in order to find opportunities for multiple resource use and sustainable development. The needs of future generations and broader communities are taken into account throughout. The book studies regional planning and the implementation of plans, offering guidance and support to parties involved in debates on sustainable development and improving the quality of their decision making.

Economics of Coastal and Water

Resources: Valuing Environmental Functions R.K. Turner, I. J. Bateman, W.N. Adger, 2013-04-18 Most of the chapters in this volume are authored by staff or associates of the Centre for Social and Economic Research on the Global Environment (CSERGE). CSERGE is a research centre sponsored by the UK Economic and Social Research Council (ESRC) which specialises in interdisciplinary work focussed on environmental management issues. We are grateful for the long-term support that we have received from the ESRC. We would also like to acknowledge the efforts of Ann Dixon and Shin Pearce in the preparation of this volume.

vii INTRODUCTION CHAPTER 1 ECOLOGICAL ECONOMICS AND COASTAL ZONE ECOSYSTEMS VALUES AN OVERVIEW Turner R K Bateman I J and Adger W N 1 1 Coastal zone pressure and sustainable management challenges Given the continued intensification of the process of globalisation involving population growth, population density changes via urbanisation, industrial development, increased trade and capital flows, liberalisation of transnational corporation activity and lifestyle and attitudinal changes, coastal zones and their hydrologically linked catchment areas have come under heavy environmental pressure. The scale and extent of socio-economic activities have profound implications for the now coevolving natural and human systems and their complex interrelationships. Turner, Perrings and Folke 1997 The consequences of this process of change manifest themselves across a range of spatial and temporal scales. Indeed, the juxtaposition of different spatial, functional and temporal scales that is inherent in the catchment-coastal ecosystems-seas-oceans continuum poses particularly difficult challenges for both science and resource management governance.

Quantitative Eco-nomics Peter Bartelmus, 2008-04-19 This thought provoking and colorful book cuts through the fog of vision and advocacy by comparing and applying new quantitative tools of both environmental and ecological economics Environmental accounts and empirical analyses provide operational concepts and measures of the sustainability of economic performance and growth The text raises doubts however about the measurability of sustainable development Further reading sections are provided at the end of each chapter

Introduction to Sustainability Nolberto Munier, 2005-06-17 Sustainability relates with Economics Society and Environment However one common fact that links them all is the generation of waste This chapter is divided into two The first part analyses the current generation of waste as well as its treatment The second intends to establish policies for the future treatment of waste or better yet for ceasing the generation of waste This first part begins by raising some capital questions What is waste Which are the components of waste Where is waste generated and How is waste treated The second part will deal with Why is waste produced and What is society doing to correct this problem

2 2 First part Current generation and treatment of waste

2 2 1 What is waste The dictionary defines waste as something useless unwanted or defective and the word by product as something produced in an industrial or biological process in addition to the principal product From the point of view of sustainability the word waste does not have that meaning as though it may be unwanted it is not something useless and is certainly not defective Even if in a manufacturing process a product or part of it does not conform to the manufacturer s quality specs it does not thereby become waste but is rather scrap material that is usually brought back to its original state and then processed again

Coastal Zones Juan Baztan, Omer Chouinard, Bethany Jorgensen, Paul Tett, Jean-Paul Vanderlinden, Liette Vasseur, 2015-05-26 Coastal Zones Solutions for the 21st Century bridges the gap between national and international efforts and the local needs for actions in communities where coastal zone challenges are faced daily The solution oriented approach covers issues of coastal zone management as well as responses to natural disasters This work provides ideas on how to face the challenges develop solutions and localize management of common pool resources Coastal Zones targets academic stakeholders and coastal stakeholders who have local knowledge and experience but need a theoretical framework and a greater range of skills to make use of this experience Represents the collaborative work of more than 200 coastal zone researchers from all continents Provides a transdisciplinary approach that draws on stakeholder knowledge as well as diverse disciplines in the natural and social sciences Provides a basis for the co development of an effective understanding of social ecological systems in the coastal zone

Community Quality-of-Life Indicators: Best Cases

III M. Joseph Sirgy, Rhonda Phillips, Don Rahtz, 2009-08-21 Community quality of life QOL indicators continue to gain attention and interest in their use as many communities and regions design and apply them Evolving from early use as data systems indicators are increasingly being integrated into overall planning and other public policy activities Their use is found not only in monitoring and evaluation applications but also in the context of increasing citizen participation in guiding

communities towards achieving desired goals Indeed the emphasis in many indicator applications now includes linking actions to outcomes making sure that the indicators are integrated useful and effective in helping communities address QOL issues The use of QOL indicators to consider a full spectrum of community and regional well being is exciting and the focus on integration is certain to bring new and innovative applications to the forefront This is the third book in a series covering best practices in community QOL indicators Each volume presents individual cases chapters of communities at the local or regional levels that have designed and implemented community indicators programs In Volume I we present eight chapters from a variety of contexts from the county level in the U S to the large megalopolis of Sao Paulo to looking at a cross section of communities throughout Europe Also included are three chapters from Canada a leader in applying community indicator systems
