Regulatory Properties Mammalian Adenylyl Cyclases:

Regulatory Properties of the Mammalian Adenylyl Cyclases Zhengui Xia, 1996 *Characterization of the Regulatory Properties of Mammalian Adenylyl Cyclase* Gregor Zimmerman, 2000 **G Protein Pathways** Ravi Iyengar, John D. Hildebrandt, 2002 This third volume in the trio covering G proteins features integrated approaches to studying G proteins. Methods pertaining to signaling mechanisms are presented including theoretical and modeling approaches, biochemistry and molecular biology, and cell biology and physiology. The techniques for studying the structure and function of G proteins are important not only to those with specific research interests in them but also endocrinologists and pharmacologists conducting research on signaling mechanisms that are increasingly understood to interact with G proteins. *Transduction Mechanisms in Cellular Signaling* Edward A. Dennis, Ralph A. Bradshaw, 2011-04-12 Cell signaling, which is also often referred to as signal transduction or, in more specialized cases, transmembrane signaling, is the process by which cells communicate with their environment and respond temporally to external cues that they sense there. All cells have the capacity to achieve this to some degree, albeit with a wide variation in purpose, mechanism, and response. At the same time, there is a remarkable degree of similarity over quite a range of species, particularly in the eukaryotic kingdom, and comparative physiology has been a useful tool in the development of this field. The central importance of this general phenomenon—sensing of external stimuli by cells—has been appreciated for a long time, but it has truly become a dominant part of cell and molecular biology research in the past three decades, in part because a description of the dynamic responses of cells to external stimuli is, in essence, a description of the life process itself. This approach lies at the core of the developing fields of proteomics and metabolomics, and its importance to human and animal health is already plainly evident. Provided by publisher. *Handbook of Cell Signaling* Ralph A. Bradshaw, Edward A. Dennis, 2009-11-03 *Handbook of Cell Signaling* Three Volume Set 2e is a comprehensive work covering all aspects of intracellular signal processing, including extra- and intracellular membrane receptors, signal transduction, gene expression, translation, and cellular organotypic signal responses. The second edition is an up-to-date expanded reference, with each section edited by a recognized expert in the field. Tabular and well-illustrated, the Handbook will serve as an in-depth reference for this complex and evolving field. *Handbook of Cell Signaling* 2e will appeal to a broad cross-disciplinary audience interested in the structure, biochemistry, molecular biology, and pathology of cellular effectors. Contains over 350 chapters of comprehensive coverage on cell signaling. Includes discussion on topics from ligand-receptor interactions to organ-organism responses. Provides user-friendly, well-illustrated, reputable content by experts in the field. *Physiology Or Medicine, 1991-1995* Nils Ringertz, 1997 During the period 1991-1995, important areas of physiological/medical research being recognized were ion channels in cells, protein phosphorylation, split genes, G proteins, and genetic control of embryonic development. The following is a list of the Nobel laureates for those years, with a description of the works that won them their prizes: 1991 E. NEHER; 1992 E. H. FISCHER; 1993 R. J. ROBERTS; 1994 A. G. GILMAN; 1995 E. B.

LEWIS C N SSLEIN VOLHARD E F WIESCHAUS for their discoveries concerning the genetic control of early embryonic development Heterotrimeric G-Protein Effectors Ravi Iyengar,1994-09-08 This volume of Methods in Enzymology and its companion Volume 237 include molecular biological and biochemical methods for the study of cell surface heterotrimeric G proteins and their effectors Methods unique to signal transducing G proteins and general techniques that have been applied to the study of G protein systems are covered **Transmembrane Receptors and Channels** A.G. Lee,1997-03-11 Volume 6 of Biomembranes covers transmembrane receptors and channels A particularly important role for the membrane is that of passing messages between a cell and its environment Part I of this volume covers receptors for hormones and growth factors Here as in so many other areas of cell biology the application of the methods of molecular biology have led to the recognition of a number of families of receptors Typically such receptors contain an extracellular ligand binding domain a transmembrane domain and an intracellular catalytic domain whose activation as a result of ligand binding leads to generation of second messengers within the cell and stimulation of a range of cytosolic enzymes An alternative signaling strategy exploited in particular in the nervous system is to use ion channels to allow controlled movement of monovalent Na K or divalent Ca² cations in or out of the cell resulting in changes in membrane potential or alterations in the intracellular concentration of Ca² Part II of this volume is concerned with these ion channels and with other often simpler ion channel systems whose study can throw light on channel mechanism *Perspectives on Vasopressin* John F. Laycock,2010 Vasopressin is a hormone which has an increasingly important profile Not only does it play a physiologically significant role in renal water regulation but it also has other renal actions and plays a role in overall cardiovascular control Even more interesting is the recent growing interest in its potential effects on the brain notably its influence on specific behaviours This monograph about the polypeptide vasopressin covers all aspects relating to the production control of release and actions of this molecule within the body including its roles as a hormone and as a central neurotransmitter A consideration of the evolution of the molecule across the species and a brief historical perspective are also included Clinical conditions associated with hypo and hyper production states are considered together with aspects of treatment in addition to other clinical correlates Sample Chapter s Chapter 1 Introduction to Vasopressin 204 KB Contents Introduction to Vasopressin Comparative and Evolutionary Aspects of Vasopressin The Neurohypophysial System Synthesis and Metabolism of Vasopressin Vasopressin Receptors the Signalling Cascade and Mechanisms of Action Pharmacology of the Vasopressin Receptors Vasopressin and Its Renal Effects Vasopressin and the Cardiovascular System Vasopressin and Its Interactions with Other Hormones and Control Systems Understanding the Role of Vasopressin in the Hypothalamo Pituitary Adrenocortical Axis Vasopressin The Central Systems Vasopressin Secretion Mechanisms of Control of Secretion from the Posterior Pituitary Gland Clinical Aspects of Vasopressin Readership Academics researchers and postgraduates in the field of endocrinology Signal Transduction Bastien D. Gomperts,Ijsbrand M. Kramer,Peter E.R. Tatham,2003-10-15 Signal

Transduction is a text reference on cellular signalling processes Starting with the basics it explains how cells respond to external cues hormones cytokines neurotransmitters adhesion molecules extracellular matrix etc and shows how these inputs are integrated and co ordinated The first half of the book provides the conceptual framework explaining the formation and action of second messengers particularly cyclic nucleotides and calcium and the mediation of signal pathways by GTP binding proteins The remaining chapters deal with the formation of complex signalling cascades employed by cytokines and adhesion molecules starting at the membrane and ending in the nucleus there to regulate gene transcription In this context growth is an important potential outcome and this has relevance to the cellular transformations that underlie cancer The book ends with a description at the molecular level of how signalling proteins interact with their environment and with each other through their structural domains Each main topic is introduced with a historical essay detailing the sources key observations and experiments that set the scene for recent and current work
