Reindustrialization and Technology Roy Rothwell, Walter Zegveld, 1985      **Reindustrialization and Technology** Roy Rothwell, Walter Zegveld, 1985      Reindustrialization and technology, Roy Rothwell, Walter Zegveld, 1985      *Management of Technology* H. Lowe, 1995-10-31 Explains the purpose of a technology strategy and the need for its integration with other business policies      **Reindustrialization Or New Industrialization**, 1981      *The American Cities and Technology Reader* Gerrylynn K. Roberts, 1999 Designed to be used on its own or as a companion volume to the textbook this book offers in depth readings on the technological dimensions of US cities from the earliest settlements to the internet communications of the 1990s      *Technological Change in a Spatial Context* Enrico Ciciotti, Neil Alderman, Alfred Thwaites, 2012-12-06 This book represents a selection of contributions to the Regional Science Association European Summer Institute held at Arco Lake of Garda Italy from 17th to 23rd July 1988 on the theme of Theories and policies of technological development at the local level As such it forms a complementary volume to the collection of invited papers entitled The Spatial Context of Technological Development edited by Professors Riccardo Cappellin and Peter Nijk amp and published by Avebury Gower The Summer Institute covered a broad range of themes and contributions from over 100 researchers It has therefore not been our intention to represent or replicate these themes directly but to provide as wide an international coverage of current research in regional science in the field of technological change as possible The papers to be found in this book are drawn from the European Community Eastern Europe Scandinavia North America and elsewhere Inevitably as the book was to be published in English most of the editorial work has been undertaken at the Centre for Urban and Regional Development Studies at Newcastle University In so doing we have attempted to standardize the English as far as possible whilst trying not to lose the characteristics of the styles of the individual authors      **Entrepreneurship & Technology** Wayne S. Brown, Roy Rothwell, 1986      **Competitiveness Through Technology** Jerry Dermer, 1986      Entrepreneurship, Human Capital, and Regional Development Rui Baptista, João Leitão, 2015-01-14 This book makes original contributions to the literature on clusters human capital and regional development by focusing on the link between entrepreneurship and economic growth aiming for a better understanding of the dynamics of growth determined by the entrepreneur s action in the regional space The focus is therefore on critical reflection and rethinking the articulation between three levels of analysis of economic systems namely entrepreneurship human capital and regional development which have not so far been perfectly articulated in the literature of reference on endogenous growth Although there has been significant research so far into the success and failure of clusters the implications of these multiple research efforts fail to provide political decision makers and company managers with critical information about which mechanisms lie behind cluster success and also about how clusters survive and prosper The innovative approaches presented in this book on entrepreneurship human capital mobility and regional development have considerable potential to create new and original implications for decision makers and managers In terms

of value added this book contributes to the literature by seeking answers to the following questions i Is the growth and success of clusters over time due to concentration and transmission of business competences through spin offs located in a given regional space ii Does increased density of job options outside the workplace contribute to increased mobility of human capital between firms located within clusters and so improve coordination in the local labor market iii Do spin offs benefit from hiring workers from successful incumbents inasmuch as those workers are expected to perform better than other workers from different origins Integrating theoretical frameworks empirical research and regional case studies from Portugal Spain Norway and Turkey the editors and contributors demonstrate that the regional dynamics of industry growth are strongly influenced by the mobility of employees towards new firms

### The Dynamics of

Technology G. Barbiroli,2013-03-14 Technology is taking on an increasingly central and determining role in so ciety and can provide contradictory results wealth on the one hand but also unemployment environmental imbalances and other social problems on the other Manufacturing techniques and production organization are chosen in every country based mainly on the specific needs of the companies while the real needs of each population are often quite different Already in order to prevent all forms of technology from becoming in creasingly invasive towards both the natural supply of resources and the specific though highly differentiated needs of humanity technological paths must be identified and followed which are capable of making the vari ous needs compatible from the standpoint of sustainable development the conservation and increase in value of natural resources and the quality of development This will become increasingly important in the future This goal is undoubtedly ambitious and difficult to achieve however evi dence of the problems caused by generalized uncontrolled use of technolo gy all over the world leads us to believe that intense efforts must be made to achieve this aim If not humankind runs the risk of an irreversible degra dation of the most important aspects of economic development and its quali ty Within this framework those companies that produce goods and services obviously occupy a central active role which they must play with a view both to competitiveness and overall qualification and to contributing to the objectives of sustainable development
