Concrete Floors and Slabs Ravindra K. Dhir, Moray D. Newlands, T. A. Harrison, 2002 Concrete is a global material that underwrites commercial wellbeing and social development There is no substitute that can be used on the same engineering scale and its sustainability exploitation and further development are imperatives to creating and maintaining a healthy economy and environment worldwide The pressure for change and improvement of performance is relentless and necessary Concrete must keep evolving to satisfy the increasing demands of all its users

Strength and Behavior of Reinforced Concrete Slab-column Connections Subjected to Static and Dynamic Loadings Marvin E. Criswell, 1970 The objectives of this investigation were to study the strength and behavior of slowly statically loaded reinforced concrete slab column connections and to determine the effect of rapid dynamic loading on the strength and behavior by comparison with the static test results Nineteen full scale models of a connection and adjoining slab area consisting of a simply supported slab 84 or 94 inches square and 6 1 2 inches thick loaded concentrically on a 10 or 20 inch square stub column at the center of the slab were tested The main variables were the amounts of reinforcement in the slab p 0 75 and 1 50 percent the column size and the loading speed Eight specimens were loaded to failure statically two were subjected to a very rapidly applied load of short duration and nine were loaded to failure by a rapidly applied load with a rise time chosen to represent the conditions in a blast loaded structure The static test results are compared with 12 shear strength prediction methods Differences between the mechanism of shear failure in slabs and beams are examined Author
