Re-inventions Philippa Lang,2005 *The Scientist in the Early Roman Empire* Richard Carrier,2017-12-01 In this extensive sequel to *Science Education in the Early Roman Empire* Dr Richard Carrier explores the social history of scientists in the Roman era Was science in decline or experiencing a revival under the Romans What was an ancient scientist thought to be and do Who were they and who funded their research And how did pagans differ from their Christian peers in their views toward science and scientists Some have claimed Christianity valued them more than their pagan forebears In fact the reverse is the case And this difference in values had a catastrophic effect on the future of humanity The Romans may have been just a century or two away from experiencing a scientific revolution But once in power Christianity kept that progress on hold for a thousand years while forgetting most of what the pagans had achieved and discovered from an empirical anatomy physiology and brain science to an experimental physics of water gravity and air Thoroughly referenced and painstakingly researched this volume is a must for anyone who wants to learn how far we once got and why we took so long to get to where we are today *The Routledge Companion to Literature and Science* Bruce Clarke,Manuela Rossini,2010-09-13 Pt 1 Literatures and sciences pt 2 Disciplinary and theoretical approaches pt 3 Periods and cultures

The Ideals of Inquiry G. E. R. Lloyd, 2014-05-30 Long before science as we know it today existed sophisticated studies of the external world were undertaken notably in Mesopotamia India China and Greece G E R Lloyd explores three interrelated issues concerning those investigations This first issue is methods how was it thought that they should be pursued The second

is subject matter what was assumed about what there is to be investigated The third issue is aims and value what were such investigations thought to be good for Thus how did an ideal of demonstration that would yield incontrovertible conclusions come to arise and what did it owe to the political institutions of the society in which it first developed namely ancient Greece Debate has been widely practised and not just in literate societies Lloyd s second chapter draws up a taxonomy of ancient debates and discusses how the ideals of transparency and accountability were made explicit Then how did ideas about the need to undertake systematic research come to be formulated and such research practised and what obstacles did it face Different equally valid assumptions have been made about what there is to be investigated reflecting what is here called the multidimensionality of the phenomena and different ancient investigators entertained different aims for their work mirroring but sometimes going beyond the current values of their society Taking stock of all this diversity the final chapter spells out the implications for our understanding of the history of human reasoning in general exploring its commonalities and where and why it has manifested and continues to manifest specificities across different populations

Being, Humanity, and Understanding G. E. R. Lloyd, 2012-07-12 This cross cultural study explores the diversity of views that humans have held on being humanity and understanding It asks how far we are bound by the conceptual systems to which we belong and explores topics such as ontology morality philosophy of language and communication

Simplicius on the Planets and Their Motions Alan C. Bowen,2012-11-29 The book contends that the digression ending Simplicius In de caelo 2 12 is not a proper history of early Greek planetary theory but a creative attempt to show that to accept Ptolemy s planetary hypotheses one need not repudiate Aristotle s argument that the cosmos is eternal

Disciplines in the Making G. E. R. Lloyd,2009-09-17 The organisation of higher education across the world is one of several factors that conspire to create the assumption that our own map of the intellectual disciplines is broadly speaking valid cross culturally Disciplines in the Making challenges this in relation to eight main areas of human endeavour namely philosophy mathematics history medicine art law religion and science Lloyd focuses on historical and cross cultural data that throw light on the different ways in which these disciplines were constituted and defined in different periods and civilisations especially in ancient Greece and China and how the relationships between them were understood particularly when one or other discipline claimed hegemonic status as happened at different times with philosophy history religion and science He also explores the role of elites whether positive when they foster the

professionalisation of a discipline or negative when they restrict recruitment to the profession when they insist on adherence to established norms concepts and practices and thereby inhibit further innovation The issues are relevant to current educational policy in relation to the ever increasing specialisation we see especially in the sciences and to the difficulties encountered in making the most of the opportunities for inter or trans disciplinary research Comptes Rendus Philosophiques ,2005
