Fenton,Ed Dubinsky,2012-12-06 Intended for first or second year undergraduates this introduction to discrete mathematics covers the usual topics of such a course but applies constructivist principles that promote indeed require active participation by the student Working with the programming language ISETL whose syntax is close to that of standard mathematical language the student constructs the concepts in her or his mind as a result of constructing them on the computer in the syntax of ISETL This dramatically different approach allows students to attempt to discover concepts in a Socratic dialog with the computer The discussion avoids the formal definition theorem approach and promotes active involvement by the reader by its questioning style An instructor using this text can expect a lively class whose students develop a deep conceptual understanding rather than simply manipulative skills Topics covered in this book include the propositional calculus

operations on sets basic counting methods predicate calculus relations graphs functions and mathematical induction

Suthers,2013-04-17 Arguing to Learn Confronting Cognitions in Computer Supported Collaborative Learning Environments focuses on how new pedagogical scenarios task environments and communication tools within Computer Supported Collaborative Learning CSCL environments can favour collaborative and productive confrontations of ideas evidence arguments and explanations or arguing to learn This book is the first that has assembled the work of internationally renowned scholars on argumentation related CSCL research All chapters present in depth analyses of the processes by which the interactive confrontation of cognitions can lead to collaborative learning on the basis of a wide variety of theoretical models empirical data and Internet based tools   <u>Social Networks</u> Samuel Leinhardt,2013-09-17 Social Networks A Developing Paradigm contains studies of the nature and impact of social structure on behavior It draws together readings from a variety of social science areas that share the basic premise that structure in social relationships can be fruitfully operationalized in terms of networks It attempts to bring together classic works that opened new research areas and works that contain important statements of perspective method or empirical findings The book is organized into four parts Part I focuses on the cognitive organization of social relations and the effects of local social structure on individuals In Part II the authors consider networks of ties in large social agglomerations and treat a variety of different types of social relationships The emphasis here is on empirical studies Specific extant social networks are investigated to test a variety of structural hypotheses Part III contains studies that address issues more common among social anthropologists than sociologists or social psychologists The chapters in Part IV while occasionally containing applications are primarily methodological These discuss mathematical and statistical ideas for modeling and analyzing social networks   **Conceptual Structures: Knowledge Architectures for Smart Applications** Uta Priss,Simon Polovina,Richard Hill,2007-08-24 Researchers and professionals in the relevant fields will find this book a must read as it defines the leading edge of current research into conceptual structures It constitutes the refereed

proceedings of the 15th International Conference on Conceptual Structures held in Sheffield UK in July 2007 With almost 50 papers contained in its 500 pages it includes a special focus on the application of conceptual structures in business and technological settings and is organized into topical sections for ease of reference *Introduction to Graph Neural Networks* Zhiyuan Liu,Jie Zhou,2020-03-20 This book provides a comprehensive introduction to the basic concepts models and applications of graph neural networks It starts with the introduction of the vanilla GNN model Then several variants of the vanilla model are introduced such as graph convolutional networks graph recurrent networks graph attention networks graph residual networks and several general frameworks Graphs are useful data structures in complex real life applications such as modeling physical systems learning molecular fingerprints controlling traffic networks and recommending friends in social networks However these tasks require dealing with non Euclidean graph data that contains rich relational information between elements and cannot be well handled by traditional deep learning models e g convolutional neural networks CNNs or recurrent neural networks RNNs Nodes in graphs usually contain useful feature information that cannot be well addressed in most unsupervised representation learning methods e g network embedding methods Graph neural networks GNNs are proposed to combine the feature information and the graph structure to learn better representations on graphs via feature propagation and aggregation Due to its convincing performance and high interpretability GNN has recently become a widely applied graph analysis tool Variants for different graph types and advanced training methods are also included As for the applications of GNNs the book categorizes them into structural non structural and other scenarios and then it introduces several typical models on solving these tasks Finally the closing chapters provide GNN open resources and the outlook of several future directions *Proof Techniques in Graph Theory* Frank Harary,1969 Conceptual Structures: Integration and Interfaces Uta Priss,Dan Corbett,Galia Angelova,2003-08-06 **Graphs and Homomorphisms** Pavol Hell,Jaroslav Nesetril,2004-07-22 This is a book about graph homomorphisms Graph theory is now an established discipline but the study of graph homomorphisms has only recently begun to gain wide acceptance and interest The subject gives a useful perspective in areas such as graph reconstruction products fractional and circular colourings and has applications in complexity theory artificial intelligence telecommunication and most recently statistical physics Based on the authors lecture notes for graduate courses this book can be used as a textbook for a second course in graph theory at 4th year or master s level and has been used for courses at Simon Fraser University Vancouver Charles University Prague ETH Zurich and UFRJ Rio de Janeiro The exercises vary in difficulty The first few are usually intended to give the reader an opportunity to practice the concepts introduced in the chapter the later ones explore related concepts or even introduce new ones For the harder exercises hints and references are provided The authors are well known for their research in this area and the book will be invaluable to graduate students and researchers alike STACS 96 Claude Puech,Rüdiger Reischuk,1996-02-14 This book constitutes the refereed proceedings of the 13th Symposium on Theoretical Aspects of Computer Science STACS 96 held in

Grenoble France in February 1996 The 52 revised papers presented were selected from a total of 185 submissions also included are three invited papers The volume addresses all current aspects of theoretical computer science and is organized in sections on complexity theory automata theory parallel algorithms learning parallel and distributed systems cryptography logic and database theory algorithms semantics and program verification and communication complexity *General Topology and Its Relations to Modern Analysis and Algebra 2* Z. Frolík,M. Katětov,V. Pták,2014-05-12 General Topology and Its Relations to Modern Analysis and Algebra II is comprised of papers presented at the Second Symposium on General Topology and its Relations to Modern Analysis and Algebra held in Prague in September 1966 The book contains expositions and lectures that discuss various subject matters in the field of General Topology The topics considered include the algebraic structure for a topology the projection spectrum and its limit space some special methods of homeomorphism theory in infinite dimensional topology types of ultrafilters on countable sets the compactness operator in general topology and the algebraic generalization of the topological theorems of Bolzano and Weierstrass This publication will be found useful by all specialists in the field of Topology and mathematicians interested in General Topology **Graph Neural Networks: Foundations, Frontiers, and Applications** Lingfei Wu,Peng Cui,Jian Pei,Liang Zhao,2022-01-03 Deep Learning models are at the core of artificial intelligence research today It is well known that deep learning techniques are disruptive for Euclidean data such as images or sequence data and not immediately applicable to graph structured data such as text This gap has driven a wave of research for deep learning on graphs including graph representation learning graph generation and graph classification The new neural network architectures on graph structured data graph neural networks GNNs in short have performed remarkably on these tasks demonstrated by applications in social networks bioinformatics and medical informatics Despite these successes GNNs still face many challenges ranging from the foundational methodologies to the theoretical understandings of the power of the graph representation learning This book provides a comprehensive introduction of GNNs It first discusses the goals of graph representation learning and then reviews the history current developments and future directions of GNNs The second part presents and reviews fundamental methods and theories concerning GNNs while the third part describes various frontiers that are built on the GNNs The book concludes with an overview of recent developments in a number of applications using GNNs This book is suitable for a wide audience including undergraduate and graduate students postdoctoral researchers professors and lecturers as well as industrial and government practitioners who are new to this area or who already have some basic background but want to learn more about advanced and promising techniques and applications Selected Papers on Algebra and Topology by Garrett Birkhoff J.S. Oliveira,G.-C. Rota,1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historieal background as I see it In addition to these I have listed some subsequent papers by others which

have further developed some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of ea ch paper reprinted there and to indieate later developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928 32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallee Poussin s beautiful Cours d Analyse Infinitesimale Hausdorff s Grundz ge der Mengenlehre and Frechet s Espaces Abstraits In addition I discovered Caratheodory s 1912 paper Vber das lineare Mass von Punktmengen and Hausdorff s 1919 paper on Dimension und Ausseres Mass and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published 2 This background led to the work summarized in Part IV **Application of Graph Rewriting to Natural Language Processing** Guillaume Bonfante,Bruno Guillaume,Guy Perrier,2018-06-19 The paradigm of Graph Rewriting is used very little in the field of Natural Language Processing But graphs are a natural way of representing the deep syntax and the semantics of natural languages Deep syntax is an abstraction of syntactic dependencies towards semantics in the form of graphs and there is a compact way of representing the semantics in an underspecified logical framework also with graphs Then Graph Rewriting reconciles efficiency with linguistic readability for producing representations at some linguistic level by transformation of a neighbor level from raw text to surface syntax from surface syntax to deep syntax from deep syntax to underspecified logical semantics and conversely *Computer Vision – ECCV 2020* Andrea Vedaldi,Horst Bischof,Thomas Brox,Jan-Michael Frahm,2020-11-15 The 30 volume set comprising the LNCS books 12346 until 12375 constitutes the refereed proceedings of the 16th European Conference on Computer Vision ECCV 2020 which was planned to be held in Glasgow UK during August 23 28 2020 The conference was held virtually due to the COVID 19 pandemic The 1360 revised papers presented in these proceedings were carefully reviewed and selected from a total of 5025 submissions The papers deal with topics such as computer vision machine learning deep neural networks reinforcement learning object recognition image classification image processing object detection semantic segmentation human pose estimation 3d reconstruction stereo vision computational photography neural networks image coding image reconstruction object recognition motion estimation Graph Learning and Network Science for Natural Language Processing Muskan Garg,Amit Kumar Gupta,Rajesh Prasad,2022-12-28 Advances in graph based natural language processing NLP and information retrieval tasks have shown the importance of processing using the Graph of Words method This book covers recent concrete information from the basics to advanced level about graph based learning such as neural network based approaches computational intelligence for learning parameters and feature reduction and network science for graph based NPL It also contains information about language generation based on graphical theories and language models Features

Presents a comprehensive study of the interdisciplinary graphical approach to NLP Covers recent computational intelligence techniques for graph based neural network models Discusses advances in random walk based techniques semantic webs and lexical networks Explores recent research into NLP for graph based streaming data Reviews advances in knowledge graph embedding and ontologies for NLP approaches This book is aimed at researchers and graduate students in computer science natural language processing and deep and machine learning *Relational Data Clustering* Bo Long,Zhongfei Zhang,Philip S. Yu,2010-05-19 A culmination of the authors years of extensive research on this topic Relational Data Clustering Models Algorithms and Applications addresses the fundamentals and applications of relational data clustering It describes theoretic models and algorithms and through examples shows how to apply these models and algorithms to solve real world problems After defining the field the book introduces different types of model formulations for relational data clustering presents various algorithms for the corresponding models and demonstrates applications of the models and algorithms through extensive experimental results The authors cover six topics of relational data clustering Clustering on bi type heterogeneous relational data Multi type heterogeneous relational data Homogeneous relational data clustering Clustering on the most general case of relational data Individual relational clustering framework Recent research on evolutionary clustering This book focuses on both practical algorithm derivation and theoretical framework construction for relational data clustering It provides a complete self contained introduction to advances in the field
