Smith, 2011-07-22 This topical book addresses contemporary concern with the interconnections between geography and morality. Covers both the geographical context of morality and moralities in geographical methods and practices. Contains up to date case studies based on original research. Deals with controversial issues such as problems of globalization, European integration, human rights in Nigeria, territorial conflict in Israel and land reform in post-apartheid South Africa. It offers practical guidance for research planning and design that incorporates geographic disciplinary knowledge to conceptualise research ethics. The volume brings together international insights from researchers in geography and related fields to provide a comprehensive overview of relevant ethical frameworks and challenges in human geography research. It includes in depth reflections on a range of ethical dilemmas that arise in certain contextual conditions and spatial constructions that face those researching and teaching on spatial dimensions of social life. With a focus on the increased need for specialist ethics training as part of postgraduate education in the Humanities and Social Sciences and the necessity for fostering sensitivity in cross cultural comparative research, the book seeks to enable people to engage in ethical decision making and moral reasoning while conducting research. Chapters examine the implications of geographical research for conceptualising ethics and discuss specific case studies from which more general conclusions linked to conceptual debates are drawn. As a research based reference guide for tackling ethically sensitive projects and international differences in legal and institutional standards and requirements, the book is useful for postgraduate and undergraduate students as well as academics teaching at senior levels.      *SAGE Internet Research Methods* Jason Hughes, 2012-06-25 Historically, social researchers have shown a willingness to exploit new technologies to enhance, facilitate and support their various activities. However, arguably no other technological development has influenced the landscape of social research as rapidly and fundamentally as the Internet. This collection avoids both uncritical embrace and wholesale dismissal by considering some of the key literature in the field of Internet research methods. Volume One: Core Issues, Debates and Controversies in Internet Research introduces themes and issues that run across all four volumes, such as epistemology, ontology and methodology in the online world, access, social divisions and the digital divide, and the ethics of online research. Volume Two: Taking Research Online: Internet Survey and Sampling addresses the range of resources, digital archives and Internet based data sources that exist online, from relatively straightforward and practical guides to such material through to more polemical pieces which consider problems relating to the use, access and

analysis of online data and resources Volume Three Taking Research Online Qualitative Approaches considers the broad range of approaches to conducting researching via or in the Internet The focus is on conventional methods that have been taken online and which in doing so have become transformed in scope and character Volume Four Research On and In the Internet Investigating the Online World follows logically from that which precedes it in exploring how social research has been taken online not simply through the deployment of existing methods and techniques via the Internet but in researchers increasing recognition and investigation of the online world as a sphere of human interaction a socio cultural arena to be explored from the desktop as it were
