Harvesting To Sensor Networks Jiming Chen, Shibo He, Youxian Sun, 2014-01-28 The harvesting of energy from ambient

energy sources to power electronic devices has been recognized as a promising solution to the issue of powering the ever growing number of mobile devices around us. Key technologies in the rapidly growing field of energy harvesting focus on developing solutions to capture ambient energy surrounding the mobile devices and convert it into usable electrical energy for the purpose of recharging said devices. Achieving a sustainable network lifetime via battery aware designs brings forth a new frontier for energy optimization techniques. These techniques had in their early stages resulted in the development of low power hardware designs. Today they have evolved into power aware designs and even battery aware designs. This book covers recent results in the field of rechargeable sensor networks including technologies and protocol designs to enable harvesting energy from alternative energy sources such as vibrations, temperature variations, wind, solar and biochemical energy and passive human power.

*Theory and Applications of Dependable Computer Systems* Wojciech Zamojski, Jacek Mazurkiewicz, Jarosław Sugier, Tomasz Walkowiak, Janusz Kacprzyk, 2020-05-21. This book presents selected papers from the Fifteenth International Conference on Dependability of Computer Systems DepCoS RELCOMEX which illustrate the diversity of theoretical problems in analysis of performability, reliability and security of contemporary computer systems. Covering also methodologies and practical tools involved in this field, it is a valuable reference resource for scientists, researchers, practitioners and students who are dealing with these subjects. Established in 2006, DepCoS RELCOMEX is an annual conference series organised by Wrocław University of Science and Technology. It focuses on the dependability and performability of contemporary computer systems, topics that can provide solutions to new challenges in evaluation of their reliability and efficiency. Since they are probably the most complex technical systems ever engineered by humans, the organization of modern computer systems cannot be modelled and analysed solely as structures; however, complex and distributed, built only on the basis of technical resources. Instead, they should be considered as a unique blend of interacting people, their needs and behaviours, networks, together with mobile properties, iCloud organisation, Internet of Everything and a large number of users dispersed geographically and producing an unimaginable number of applications. This new interdisciplinary approach is developing a continually increasing range of methods which apply also the latest findings in artificial intelligence, AI and computational intelligence, CI.

*Statistical Extremes and Applications* J. Tiago de Oliveira, 2013-04-17 The first references to statistical extremes may perhaps be found in the Genesis The Bible vol I the largest age of Methu selah and the concrete applications faced by Noah the long rain the large flood the structural safety of the ark But as the pre history of the area can be considered to last to the first quarter of our century we can say that Statistical Extremes emerged in the last half century It began with the paper by Dodd in 1923 followed quickly by the papers of Frechet in 1927 and Fisher and Tippet in 1928 after by the papers by de Finetti in 1932 by Gumbel in 1935 and by von Mises in 1936 to cite the more relevant the first complete frame in what regards probabilistic problems is due to Gnedenko in 1943 And by that time Extremes begin to explode not only in what regards applications floods breaking strength of materials gusts of wind etc but also in areas going from Probability to Stochastic Processes from Multivariate Structures to Statistical Decision The history after the first essential steps can't be written in few pages the narrow and shallow stream gained momentum and is now a huge river enlarging at every moment and flooding the margins Statistical Extremes is thus a clear cut field of Probability and Statistics and a new exploding area for research

*Multidisciplinary Design Optimization and Its Application in Deep Manned Submersible Design* Binbin Pan, Weicheng Cui, 2020-08-28 This book investigates Reliability based Multidisciplinary Design Optimization RBMDO theory and its application in the design of deep manned submersibles DMSs Multidisciplinary Design Optimization MDO is an effective design method for large engineering systems like aircraft warships and satellites which require designers and engineers from various disciplines to cooperate with each other MDO can be used to handle the conflicts that arise between these disciplines and focuses on the optimal design of the system as a whole However it can also push designs to the brink of failure In order to keep the system balanced Reliability based Design RBD must be incorporated into MDO Consequently new algorithms and methods have to be developed for RBMDO theory This book provides an

essential overview of MDO RBD and RBMDO and subsequently introduces key algorithms and methods by means of case analyses In closing it introduces readers to the design of DMSs and applies RBMDO methods to the design of the manned hull and the general concept design The book is intended for all students and researchers who are interested in system design theory and for engineers working on large complex engineering systems      *Application of Stress-wave Theory to Piles* Frans B. J. Barends, 2022-06-03 Comprising 97 papers on Geotechnical Dynamic testing Equipment Performance during installation Driving equipment hammer pile soil system Reliability of predictions Theory versus experiment and simulation Each part starts with a lecture by invited keynote speakers followed by a general report on the papers New themes considered are environmental aspects related to vibration and noise the reliability of predictions emphasizing the validation of theoretical methods practical experience
