Diab,Albert Y. Zomaya,2005-10-05 A team of recognized experts leads the way to dependable computing systems With computers and networks pervading every aspect of daily life there is an ever growing demand for dependability In this unique resource researchers and organizations will find the tools needed to identify and engage state of the art approaches used for the specification design and assessment of dependable computer systems The first part of the book addresses models and paradigms of dependable computing and the second part deals with enabling technologies and applications Tough issues in creating dependable computing systems are also tackled including Verification techniques Model based evaluation Adjudication and data fusion Robust communications primitives Fault tolerance Middleware Grid security Dependability in IBM mainframes Embedded software Real time systems Each chapter of this contributed work has been authored by a recognized expert This is an excellent textbook for graduate and advanced undergraduate students in electrical engineering computer engineering and computer science as well as a must have reference that will help engineers programmers and technologists develop systems that are secure and reliable   **Green, Pervasive, and Cloud Computing** Shijian Li,2019-03-14 This book constitutes the proceedings of the 13th International Conference on Green Pervasive and Cloud Computing GPC 2018 held in Hangzhou China in May 2018 The 35 full papers included in this volume were carefully reviewed and selected from 101 initial submissions They are organized in the following topical sections network security and privacy preserving pervasive sensing and analysis cloud computing mobile computing and crowd sensing social and urban computing parallel and distributed systems optimization pervasive applications and data mining and knowledge mining   Advances in Distributed Systems Sacha Krakowiak,Santosh Shrivastava,2003-06-26 In 1992 we initiated a research project on large scale distributed computing systems LSDCS It was a collaborative project involving research institutes and universities in Bologna Grenoble Lausanne Lisbon Rennes Rocquencourt Newcastle and Twente The World Wide Web had recently been developed at CERN but its use was not yet as common place as it is today and graphical browsers had yet to be developed It was clear to us and to just about everyone else that LSDCS comprising several thousands to millions of individual computer systems nodes would be coming into existence as a consequence both of technological advances and the demands placed by applications We were excited about the problems of building large distributed systems and felt that serious rethinking of many of the existing computational paradigms algorithms and structuring principles for distributed computing was called for In our research proposal we summarized the problem domain as follows We expect LSDCS to exhibit great diversity of node and communications capability Nodes will range from mobile laptop computers workstations to supercomputers Whereas mobile computers may well have unreliable low bandwidth communications to the rest of the

system other parts of the system may well possess high bandwidth communications capability To appreciate the problems posed by the sheer scale of a system comprising thousands of nodes we observe that such systems will be rarely functioning in their entirety **Cloud, Grid and High Performance Computing: Emerging Applications** Udoh, Emmanuel,2011-06-30 This book offers new and established perspectives on architectures services and the resulting impact of emerging computing technologies including investigation of practical and theoretical issues in the related fields of grid cloud and high performance computing Provided by publisher Distributed Artificial Intelligence, Agent Technology, and Collaborative Applications Sugumaran, Vijayan,2008-12-31 This book is a catalyst for emerging research in intelligent information specifically artificial intelligent technologies and applications to assist in improving productivity in many roles such as assistants to human operators and autonomous decision making components of complex systems Provided by publisher **Internet of Things and Secure Smart Environments** Uttam Ghosh,Danda B Rawat,Raja Datta,Al-Sakib Khan Pathan,2020-11-04 The main goal of Internet of Things IoT is to make secure reliable and fully automated smart environments However there are many technological challenges in deploying IoT This includes connectivity and networking timeliness power and energy consumption dependability security and privacy compatibility and longevity and network protocol standards Internet of Things and Secure Smart Environments Successes and Pitfalls provides a comprehensive overview of recent research and open problems in the area of IoT research Features Presents cutting edge topics and research in IoT Includes contributions from leading worldwide researchers Focuses on IoT architectures for smart environments Explores security privacy and trust Covers data handling and management accumulation abstraction storage processing encryption fast retrieval security and privacy in IoT for smart environments This book covers state of the art problems presents solutions and opens research directions for researchers and scholars in both industry and academia
