Shaping Technology / Building Society Wiebe E. Bijker, John Law, 1994-09-29 Building on the influential book *The Social Construction of Technological Systems* this volume carries forward the project of creating a theory of technological development and implementation that is strongly grounded in both sociology and history Technology is everywhere yet a theory of technology and its social dimension remains to be fully developed Building on the influential book *The Social Construction of Technological Systems* this volume carries forward the project of creating a theory of technological development and implementation that is strongly grounded in both sociology and history The 12 essays address the central question of how technologies become stabilized how they attain a final form and use that is generally accepted The essays are tied together by a general introduction part introductions and a theoretical conclusion The first part of the book examines and criticizes the idea that technologies have common life cycles three case studies cover the history of a successful but never produced British jet fighter the manipulation of patents by a French Renault two studies argue for a strong sociotechnology in which artifact and social context are viewed as a single seamless web while the third looks at the ways in which a social program is a technology

Inside the Politics of Technology Hans Harbers, 2005 Though the old saying claims that man is the measure of all things the authors of *Inside the Politics of Technology* argue that the distinction implied between autonomous humans and neutral instruments of technology is an illusion On the contrary the technologies humans create simultaneously shape humans themselves By means of case studies of technologies as diverse as video cameras electric cars pregnancy tests and genetic screenings this volume considers the implications of this co production of technology and society for our philosophical and political ideas Are only humans endowed with social political and moral agency or does our technology share those qualities And if so how should we understand or practice a politics of technology

Political Theory and Community Building in Post-Soviet Russia Oleg Kharkhordin, Risto Alapuro, 2011-03-07 This book revisits many aspects of current social science theories such as actor network theory and the French school of science and technology studies to test how the theories apply in a specific situation in this case after 1991 in the city of Cherepovets in Russia home of Russia's second biggest steel producer Severstal Using political philosophy to analyse the down to earth details of the real techno scientific problems facing the world the book examines the role of things and urban infrastructure in particular in political change It considers how the city's infrastructure including housing ICT networks the provision of public utilities of all kinds has been transformed in recent years examines the roles of different actors including the municipal authorities and explores citizens differing and sometimes contradictory images of their city It includes a great deal of new thinking on how communities are built how common action is initiated to provide public goods and how the goods themselves physical things are a crucial driver of community action and community building arguably more so than more abstract social and human forces

Ownership of Knowledge Dagmar Schafer, Annapurna Mamidipudi, Marius

Buning, 2023-07-18 A framework for knowledge ownership that challenges the mechanisms of inequality in modern society. Scholars of science, technology, medicine, and law have all tended to emphasize knowledge as the sum of human understanding and its ownership as possession by law. Breaking with traditional discourse on knowledge property as something that concerns mainly words and intellectual history, science and law Dagmar Sch fer Annapurna Mamidipudi and Marius Buning propose technology as a central heuristic for studying the many implications of knowledge ownership. Toward this end, they focus on the notions of knowledge and ownership in courtrooms, workshops, policy, and research practices while also shedding light on scholarship itself as a powerful tool for making explicit the politics inherent in knowledge practices and social order. The book presents case studies showing how diverse knowledge economies are created and how inequalities arise from them. Unlike scholars who have fragmented this discourse across the disciplines of anthropology, sociology, and history, the editors highlight recent developments in the emerging field of the global history of knowledge as science, as economy, and as culture. The case studies reveal how notions of knowing and owning emerge because they reciprocally produce and determine each other's limits and possibilities: that is, how we know inevitably affects how we can own what we know, and how we own always impacts how and what we are able to know. Making Silicon Valley Christophe Lécuyer, 2006 A history of the innovative practices in the San Francisco area electronics industry that paved the way for the rise of the computer industry in Silicon Valley.

Imperial Technoscience Amit Prasad, 2014-03-14 A study of science and technology practices that shows how even emergent aspects of research and development remain entangled with established hierarchies. In the last four decades, during which magnetic resonance imaging (MRI) has emerged as a cutting edge medical technology and a cultural icon, technoscientific imaginaries and practices have undergone a profound change across the globe. Shifting transnational geography of technoscientific innovations is making commonly deployed Euro West centric divides such as west versus non west or innovating north versus non innovating south increasingly untenable. The world is indeed becoming flatter. Nevertheless, such dualist divides, which are intimately tied to other dualist categories that have been used to describe scientific knowledge and practice, continue to undergird analyses and imaginaries of transnational technoscience. Imperial Technoscience puts into broad relief the ambivalent and contradictory folding of Euro west centrism with emergent features of technoscience. It argues Euro West centric historicism and resulting over determinations not only hide the vibrant albeit hierarchical transnational histories of technoscience but also tell us little about shifting geography of technoscientific innovations. The book utilizes a deconstructive empirical approach to explore entangled histories of MRI across disciplines: physics, chemistry, medicine, etc. institutions: university, hospitals, industry, etc. and nations: United States, Britain, and India. Entangled histories of MRI: it shows better explain emergence and consolidation of particular technoscientific trajectories.

and shifts in transnational geography of science and technology e.g. centers and peripheries *Producing Power* Sonja D. Schmid, 2015-02-06 An examination of how the technical choices, social hierarchies, economic structures, and political dynamics shaped the Soviet nuclear industry leading up to Chernobyl. The Chernobyl disaster has been variously ascribed to human error, reactor design flaws, and industry mismanagement. Six former Chernobyl employees were convicted of criminal negligence; they defended themselves by pointing to reactor design issues. Other observers blamed the Soviet style of ideologically driven economic and industrial management. In *Producing Power*, Sonja Schmid draws on interviews with veterans of the Soviet nuclear industry and extensive research in Russian archives as she examines these alternate accounts. Rather than pursue one definitive explanation, she investigates how each of these narratives makes sense in its own way and demonstrates that each implies adherence to a particular set of ideas about high-risk technologies, human-machine interactions, organizational methods for ensuring safety and productivity, and even about the legitimacy of the Soviet state. She also shows how these attitudes shaped and were shaped by the Soviet nuclear industry from its very beginnings. Schmid explains that Soviet experts established nuclear power as a driving force of social, not just technical, progress. She examines the Soviet nuclear industry's dual origins in weapons and electrification programs and she traces the emergence of nuclear power experts as a professional community. Schmid also fundamentally reassesses the design choices for nuclear power reactors in the shadow of the Cold War's arms race. Schmid's account helps us understand how and why a complex sociotechnical system broke down. Chernobyl, while unique and specific to the Soviet experience, can also provide valuable lessons for contemporary nuclear projects.

The Radiance of France, new edition Gabrielle Hecht, 2009-07-31 How it happened that technological prowess and national glory or radiance, which also means radiation in French, became synonymous in France as nowhere else. In the aftermath of World War II, as France sought a distinctive role for itself in the modern postcolonial world, the nation and its leaders enthusiastically embraced large technological projects in general and nuclear power in particular. *The Radiance of France* asks how it happened that technological prowess and national glory or radiance, which also means radiation in French, became synonymous in France as nowhere else. To answer this question, Gabrielle Hecht has forged an innovative combination of technology studies and cultural and political history in a book that, as Michel Callon writes in the new foreword to this edition, not only sheds new light on the role of technology in the construction of national identities but is also a seminal contribution to the history of contemporary France. Proposing the concept of technopolitical regime as a way to analyze the social, political, cultural, and technological dynamics among engineering elites, unionized workers, and rural communities, Hecht shows how the history of France's first generation of nuclear reactors is also a history of the multiple meanings of nationalism from the postwar period and France's desire for post-Vichy redemption to 1969 and the adoption of a Frenchified American design. This paperback edition of Hecht's groundbreaking book includes both Callon's foreword and an afterword by the author in which she brings the story up to

date and reflects on such recent developments as the 2007 French presidential election the promotion of nuclear power as the solution to climate change and France's aggressive exporting of nuclear technology

Everyday Engineering

Dominique Vinck, 2009-01-23 A guide to the everyday working world of engineers written by researchers trained in both engineering and sociology Everyday Engineering was written to help future engineers understand what they are going to be doing in their everyday working lives so that they can do their work more effectively and with a broader social vision It will also give sociologists deeper insights into the sociotechnical world of engineering The book consists of ethnographic studies in which the authors all trained in both engineering and sociology go into the field as participant observers The sites and types of engineering explored include mechanical design in manufacturing industries instrument design software debugging environmental management within companies and the implementation of a system for separating household waste The book is organized in three parts The first part introduces the complexity of technical practices The second part enters the social and cultural worlds of designers to grasp their practices and motivations The third part examines the role of writing practices and graphical representation The epilogue uses the case studies to raise a series of questions about how objects can be taken into account in sociological analyses of human organizations

Situated Intervention Teun Zuiderent-Jerak, 2015-08-07

An exploration of sociological research that is neither detached nor engaged a new approach to sociological knowledge production with examples from health care In this book Teun Zuiderent Jerak considers how the direct involvement of social scientists in the practices they study can lead to the production of sociological knowledge Neither detached sociological scholarship nor engaged social science this new approach to sociological research brings together two activities often viewed as belonging to different realms intervening in practices and furthering scholarly understanding of them Just as the natural sciences benefited from broadening their scholarship from theorizing to experiment so too could the social sciences Additionally Zuiderent Jerak points out rather than proceeding from a pre set normative agenda scholarly intervention allows for the experimental production of normativity Scholars are far from detached but still may be surprised by the normative outcomes of the interactions within the experiment Zuiderent Jerak illustrates situated intervention research with a series of examples drawn from health care Among the topics addressed are patient compliance in hemophilia home care the organization of oncology care and the value of situated standardization the relationship between standardization and patient centeredness the development of patient centered pathways value driven and savings driven approaches to the construction of health care markets and multiple ontologies of safety in care for older adults Finally returning to the question of normativity in sociological research Zuiderent Jerak proposes an ethics of specificity according to which research adapts its sociological responses to the practices studied Sociology not only has more to offer to the practices it studies it also has more to learn from them

Acting in an Uncertain World Michel Callon, Pierre Lascoumes, Yannick Barthe, 2011-01-21 A call for a new form of democracy in which hybrid forums composed of experts and laypeople address such sociotechnical controversies as hazardous waste genetically modified organisms and nanotechnology Controversies over such issues as nuclear waste genetically modified organisms asbestos tobacco gene therapy avian flu and cell phone towers arise almost daily as rapid scientific and technological advances create uncertainty and bring about unforeseen concerns The authors of Acting in an Uncertain World argue that political institutions must be expanded and improved to manage these controversies to transform them into productive conversations and to bring about technical democracy They show how hybrid forums in which experts non experts ordinary citizens and politicians come together reveal the limits of traditional delegative democracies in which decisions are made by quasi professional politicians and techno scientific information is the domain of

specialists in laboratories The division between professionals and laypeople the authors claim is simply outmoded The authors argue that laboratory research should be complemented by everyday experimentation pursued in the real world and they describe various modes of cooperation between the two They explore a range of concrete examples of hybrid forums that have dealt with sociotechnical controversies including nuclear waste disposal in France industrial waste and birth defects in Japan a childhood leukemia cluster in Woburn Massachusetts and mad cow disease in the United Kingdom The authors discuss the implications for political decision making in general and describe a dialogic democracy that enriches traditional representative democracy To invent new procedures for consultation and representation they suggest is to contribute to an endless process that is necessary for the ongoing democratization of democracy Mechanizing Proof Donald MacKenzie, 2004-01-30 Most aspects of our private and social lives our safety the integrity of the financial system the functioning of utilities and other services and national security now depend on computing But how can we know that this computing is trustworthy In Mechanizing Proof Donald MacKenzie addresses this key issue by investigating the interrelations of computing risk and mathematical proof over the last half century from the perspectives of history and sociology His discussion draws on the technical literature of computer science and artificial intelligence and on extensive interviews with participants MacKenzie argues that our culture now contains two ideals of proof proof as traditionally conducted by human mathematicians and formal mechanized proof He describes the systems constructed by those committed to the latter ideal and the many questions those systems raise about the nature of proof He looks at the primary social influence on the development of automated proof the need to predict the behavior of the computer systems upon which human life and security depend and explores the involvement of powerful organizations such as the National Security Agency He concludes that in mechanizing proof and in pursuing dependable computer systems we do not obviate the need for trust in our collective human judgment **Evidence Based and Knowledge Based Social Work** Inge M. Bryderup, 2008-12-01 Policymakers in welfare democracies throughout the world are raising questions as to whether welfare systems deliver what the public expects and focus attention on increasing costs Social workers need more evidence and knowledge about an increasing diversity of social work practices Users of social welfare are increasingly individualized and made responsible for choosing and delivering their own service through contracts and this makes politicians social workers and users more interested in evidence and knowledge about social services even though these interests are often conflicting These tendencies might be part of the reasons why the evaluation of social work practice seems to be characterized at present by a variety and diversity of research methods approaches and theories
