Community College Review, 1990 The Importance of the Body-Mind Relationship in Mental Functioning and Development of Body-Focused Disorders in Adolescence, volume II Stefania Cella, Cesare Massimo Cavallera, 2024-06-28 This collection is Volume II of the Research Topic The Importance of the Body Mind Relationship in Mental Functioning and Development of Body Focused Disorders in Adolescence Adolescence is a critical period when the conflict between the body

and mind becomes particularly pronounced due to the physical changes associated with puberty These pubescent transformations can affect body image and the perception of self necessitating a renegotiation of the relationship between body and mind Failure to navigate this process successfully can lead to dissociation from the sexual body resulting in feelings of alienation hatred disinvestment and even self destructive behaviors such as eating disorders self injury and suicide

Bess,Jay R. Dee,2023-07-03 Now available in paperback this two volume work is intended to help readers develop powerful new ways of thinking about organizational principles and apply them to policy making and management in colleges and universities The book is written with two audiences in mind administrative and faculty leaders in institutions of higher learning and students both doctoral and Master s degree studying to become upper level administrators leaders and policy makers in higher education It systematically presents a range of theories that can be applied to many of the difficult management situations that college and university leaders encounter It provides them with the theoretical background to knowledgeably evaluate the many new ideas that emerge in the current literature and in workshops and conferences The purpose is to help leaders develop their own effective management style and approaches and feel confident that their actions are informed by appropriate theory and knowledge of the latest research in the field Without theory organizational leaders are forced to treat each problem that they encounter as unique as if it were a first time occurrence While leaders may have some experience with a particular issue their solutions are usually not informed by the accumulated wisdom of others who have already encountered and resolved similar situations The authors approach the theory of the organization and administration of colleges and universities from three quite different perspectives or paradigms each relying on different assumptions about the reality of organizational life in colleges and universities The positivist paradigm primarily an omnibus systems theory integrates the chapters into a comprehensive yet easily accessible whole Social constructionism the second paradigm is introduced in each chapter to illuminate the difficulty of seeking and finding meaningful consensus on problems and policies while also addressing important ethical issues that tend to be overlooked in leadership thought and action The third paradigm postmodernism draws attention to difficulties of logic and communication under the constraints of strictly linear

thinking that authorities at all levels attempt to impose on organizations This multiple paradigm approach enables readers to become more cognizant of their own assumptions how they may differ from those of others in their organization and how those differences may both create difficulties in resolving problems and expand the range of alternatives considered in organizational decision making The book offers readers the tools to balance the real world needs to succeed in today's challenging and competitive environment with the social and ethical aspirations of all its stakeholders and society at large The authors aim is to elucidate how administration can be made more efficient and effective through rational decision making while also respecting humanistic values This approach highlights a range of phenomena that require attention if the institution is ultimately to be considered successful Also available Volume 1 The State of the System Two volume set **The**

Body Image and the Asian Experience Hsiu-Lan Cheng, Yuying Tsong, 2024-11-13

Individuals of Asian descent are a demographic often overlooked in mainstream body image scholarship. Historically body image concerns were thought to only affect white upper to middle class women in North America and Western Europe. However empirical data accumulated in recent decades have subverted this myth. Contrary to popular belief and stereotypes that Asian Americans are a Model Minority in the United States they experience significant body image concerns as well as related disordered eating and mental health challenges. Asian diasporas in Western countries also face challenges similar to those faced by Asian Americans e.g. racialized and objectified views of Asians. Asian nationals in Asia on the other hand are juggling between their collective and national standards of beauty fitness and the body image ideals propagated through commercialism and capitalization amidst the historical context of colonization and the contemporary atmosphere of globalization.

Body Image and the Asian Experience: Asians, Asian Americans and Asian Diasporas Across the Globe discusses the dearth of knowledge and sometimes misinformation about body image among people of Asian descent including Asian nationals dwelling in Asia and those in the diaspora. Asian Americans, Asian immigrants in the United Kingdom, Australia etc. The first section of the book reviews the applicability of existing theories in understanding the body image experiences of individuals of Asian descent and proposes a new theoretical framework that emphasizes both decolonizing and intersectional perspectives in conceptualizing Asian body image. The next section examines the current state of research on body image among Asians, Asian Americans and Asian diasporas around the globe including attending to some seriously neglected specific demographic and social identity groups. The last section explores mental health and psychosocial implications of body image in the aspects of mental disorders, interpersonal and social relationships and identity development. Explores the body image of Asians offering new theoretical insights to address their unique experiences globally. Focuses on underrepresented groups including Asian sexual and gender minority men advancing understanding in body image research. Examines how body image influences mental health, relationships, identity and societal aspects.
