Holguin, 2019-08-29 This book provides a practical stepwise evidence based approach to effective management of patients with difficult to treat asthma The impact of asthma on morbidity and healthcare utilization increases exponentially with severity Severe refractory asthma accounts for less than 5% of all asthma Its prevalence however is often overestimated as there are several other confounding factors that make asthma difficult to treat Many novel albeit expensive therapies are

now available and providers caring for patients with severe asthma are charged with selecting the best evidence treatment. This calls for complex and nuanced decision making. Whether people with asthma gain and maintain control over their condition depends not only on the availability of effective drugs but also multiple patient and healthcare provider behaviors. Therefore now more than ever it has become increasingly important to differentiate difficult from severe refractory asthma to allow identification of patients most likely to benefit from these therapies. This volume delves into the current understanding of mechanisms and increasingly recognized heterogeneity of this complex disease. It discusses a structured approach to identification and optimization of factors contributing to poor asthma control including nonadherence, comorbidities and occupational environmental triggers. The book includes state of the art reviews on recent advances in traditional and targeted asthma therapies as well as a glimpse into what the future may hold. Highlights include a comprehensive guide to management of severe asthma in children and pregnancy as well as practical considerations to management of asthma based on different clinical phenotypes. Each chapter is authored by leading experts in the field who share their own clinical approach. This is an ideal guide for clinical pulmonologists and allergist immunologists as well as primary care providers, physician extenders in specialty practice, physicians in pulmonary allergy training and even industry partners.

**A Practical Guide to Cluster Randomised Trials in Health Services Research** Sandra Eldridge, Sally Kerry, 2012-01-09 Cluster randomised trials are trials in which groups or clusters of individuals are randomly allocated to different forms of treatment. In health care these trials often compare different ways of managing a disease or promoting healthy living in contrast to conventional randomised trials which randomise individuals to different treatments classically comparing new drugs with a placebo. They are increasingly common in health services research. This book addresses the statistical practical and ethical issues arising from allocating groups of individuals or clusters to different interventions. Key features: Guides readers through the stages of conducting a trial from recruitment to reporting. Presents a wide range of examples with particular emphasis on trials in health services research and primary care with both principles and techniques explained. Topics are specifically presented in the order in which investigators think about issues when they are designing a trial. Combines information on the latest developments in the field together with a practical guide to the design and implementation of cluster randomised trials. Explains principles and techniques through numerous examples including many from the authors own experience. Includes a wide range of references for those who wish to read further. This book is intended as a practical guide written for researchers from the health professions including doctors, psychologists and allied health professionals as well as statisticians involved in the design, execution, analysis and reporting of cluster randomised trials. Those with a more general interest will find the plentiful examples illuminating.

Recent Advances in Attempts to Improve Medication Adherence -

from basic research to clinical practice, volume II Przemyslaw Kardas,Tamas Agh,Ines Potočnjak,Cristina Mihaela Ghiciuc,Maria Teresa Herdeiro,2024-12-04 This exciting Research Topic is the second volume of Recent Advances in Attempts to Improve Medication Adherence from basic research to clinical practice which you can explore here Adequate implementation of evidence based long term therapies is an issue of utmost importance It has a direct impact on both individual and public health as well as on the sustainability of healthcare systems Unfortunately despite more than half a century of extensive research and practical and awareness raising activities medication adherence remains far from perfect Many reasons are responsible for non adherence and the issue is complicated by the rapid aging of the global society the rising tide of non communicable chronic diseases multimorbidity and associated polypharmacy This might be further exacerbated by certain conditions such as the Covid 19 pandemic However one thing is perfectly clear medication non adherence is no longer merely perceived as a patient problem In fact medication adherence depends on many non patient related factors and thus is an important indicator of the quality of care Therefore instead of blaming patients need to be supported in their therapeutic journeys Thus all the stakeholders need to collectively create adherence enabling environments and support patients in the execution of their therapies
