New Observations on the Behavior, Ecology, and Biology of Sharks and Rays Austin Gallagher, Emily Lester, Brendan Shea, 2025-08-28 Sharks and rays are a group of ancient ecologically important and highly threatened fishes Their large size high mobility and diversity allow for the assessment of the structure and function of large expanses of the ocean while making them a unique model for assessing how species respond to human induced changes such as climate change Despite the notion that many aspects of their biology and ecology remain poorly understood access to this information has never been greater due to the rapid development of emerging technologies and approaches to study sharks and rays in virtually all areas of the ocean from shallow reefs to deep trenches As the global research effort on sharks and rays continues to expand annually we are also increasing the likelihood of making novel behavioral physiological or molecular discoveries as is the potential to expand or refine known correlates of their biology or ecology These exciting observations shed light on future research efforts and aid in adaptive management and conservation

Shark Research Jeffrey C Carrier, Michael R. Heithaus, Colin A. Simpfendorfer, 2018-09-03 Over the last decade the study of shark biology has benefited from the development refinement and rapid expansion of novel techniques and advances in technology These have given new insight into the fields of shark genetics feeding foraging bioenergetics imaging age and growth movement migration habitat preference and habitat use This pioneering book written by experts in shark biology examines technologies such as autonomous vehicle tracking underwater video approaches molecular genetics techniques and accelerometry among many others Each detailed chapter offers new insights and promises for future studies of elasmobranch biology provides an overview of appropriate uses of each technique and can be readily extended to other aquatic fish and marine mammals and reptiles Including chapter authors who were pioneers in developing some of the technologies discussed in the book this book serves as the first single source reference with in depth coverage of techniques appropriate for the laboratory and field study of sharks skates and rays It concludes with a unique section on Citizen Science and its application to studies of shark biology This is a must read for any marine biologist or scientist working in the field of shark biology as well as marine biology students and graduates

A Preliminary Evaluation of the Status of Shark Species

José Ignacio Castro, Christa M. Woodley, Rebecca L. Brudek, Food and Agriculture Organization of the United Nations, 1999

The status of shark species is reviewed based on the available data A review of the history of shark fisheries demonstrates that intensive shark fisheries are not sustainable Numerous problems are encountered in assessing shark populations a

general lack of biological and fishery data lack of suitable models and lack of validated age estimates Sharks have an unusual combination of biological characteristics slow growth and delayed maturation long reproductive cycles low fecundity and long life spans These characteristics make them vulnerable to overfishing A preliminary evaluation of the status of shark species is made on the basis of historical data the reproductive potential of each species and the level of exploitation of the species In this document exploited shark species are classified numerically according to their vulnerability The majority of these species are listed as Category 1 indicating that there are not sufficient data to assess the species Available data indicate that sharks are very vulnerable and are threatened by overexploitation in many parts of the world **Florida**
