*Whale Sharks* Alistair D.M. Dove, Simon J. Pierce, 2021-08-25 Whale sharks are the largest of all fishes fascinating for comparative studies of all manner of biological fields including functional anatomy growth metabolism movement ecology behavior and physiology These gentle ocean giants have captured the interest of scientists and the imagination of the public yet their future is uncertain The conservation status of whale sharks was upgraded to Endangered on the IUCN Red List and the species faces a range of intense threats from human activities Can these iconic living animals who have survived for millions of years survive us Written by the world s leading experts in whale shark biology ecology and conservation Whale

Sharks Biology Ecology and Conservation is the first definitive volume about the world's biggest fish. Chapters include discussions of satellite-linked tags used to track whale shark movements; genetic sequencing to examine evolutionary adaptations; even the use of underwater ultrasound units to investigate the species' reproduction. The editors hope that by collating what is known, they can make it easier for future researchers, conservationists, and resource managers to fill some of the remaining knowledge gaps and provide the information they need to join the team. As you work your way through this book, we hope that you will develop a sense of awe and marvel at all of our good fortune to share the ocean and the planet with this utterly extraordinary species.

**Sharks in the Shallows** W. Clay Creswell, 2021-06-14 A detailed account of over one hundred shark-related incidents on the coast of the Carolinas from a shark bite investigator. Powerful and mysterious sharks inspire both fascination and fear. Worldwide oceans are home to some five hundred species, and of those fifty-six are known to reside in or pass through the waters off the coast of both North and South Carolina. At any given time, waders, swimmers, and surfers enjoying these waters are frequently within just one hundred feet of a shark. While it's unnerving to know that sharks often swim just below the surface in the shallows, W. Clay Creswell, a shark bite investigator for the Shark Research Institute's Global Shark Attack File, explains that attacks on humans are extremely rare. In 2019, the International Shark Attack File confirmed sixty-four unprovoked attacks on humans, including three in North Carolina and one in South Carolina. While acknowledging that they pose real dangers to humans, Creswell believes the fear of sharks is greatly exaggerated. During his sixteen-year association with the Shark Research Institute, he has investigated more than one hundred shark-related incidents and has maintained a database of all shark-human encounters along the Carolina coastlines back to 1817. Creswell uses this data to expose the truth and history of this often sensationalized topic. Beyond the statistics related to attacks in the Carolina waters, *Sharks in the Shallows* offers a history of shark-human interactions and an introduction to the world of shark attacks. Creswell details the conditions that increase a person's chances of an encounter, profiles the three species most often involved in attacks, and reveals the months and time of day with the highest probability of an encounter. With a better understanding of sharks' responses to their environment and what motivates them to attack humans, he hopes people will develop a greater appreciation of the invaluable role sharks play in our marine environment.
