Sharks: Conservation, Governance and Management Erika J. Techera, Natalie Klein, 2014-06-05

The key aim of this book is to explore the global conservation and management of sharks There has been a rapid decline in populations of many shark species while new science has emerged of the critical role they play in marine ecosystems

However the authors show that conservation law and policy have been slow to develop with only a small number of iconic species being protected worldwide The increase in fishing impact primarily through shark finning and by catch has led to shark conservation receiving greater international attention in recent years The book explores our current knowledge and status of the law and science in relation to sharks with a particular focus on improving frameworks for their conservation and management Recent trends are analysed including shark finning bans that have been put in place in several countries the widening number of nations establishing shark sanctuaries and the growth of shark based tourism The efficacy of current listing processes for endangered species and fisheries regulations is also examined Tourism is explored as an alternative to fishing and the risks and impacts associated with this industry are analysed Contributors include leading authorities from universities and conservation organizations in North America Europe and Australia A common theme is to emphasise the importance of collaborative governance between various interest groups and the need for inter disciplinary research and management approaches that are necessary to address the decline in sharks

Deadly Beautiful Liana Joy Christensen, 2011 Did you know that the humble marmot is responsible for more than one billion human deaths Or that it is possible to be bitten by a snake's head for up to an hour after it has been decapitated On the flip side for every person bitten by a shark each year 25 people are bitten by New Yorkers It seems that truth sometimes is stranger than fiction These facts and many more appear in this fascinating tribute to our world's deadly wildlife At its heart however **Deadly Beautiful** makes a passionate plea for us to learn to better cohabit with our fellow residents of planet Earth Ever increasing concern for the fate of the environment and the world's endangered wildlife means that this book is a particularly timely addition to the world of natural history publishing Dr Liana Joy Christensen one of Australia's foremost nature writers takes a fresh and entertaining look at the deadly animals with which humans have for so long enjoyed a love hate relationship These animals are generally not the aggressors nor the lethal killing machines that mythology and tradition would have us believe Most also serve vital roles in maintaining the ecological balance of their habitats while their fascinating behaviour and often striking beauty make them worthy of close study particularly as so many of them are facing the worst death of all extinction Beautifully illustrated **Deadly Beautiful** is certain to foster a new understanding and appreciation of these incredible animals and their importance on a global scale
