Sharks are Caught at Night François Poli, 1959 *Fishery Bulletin* , 2011 **Marine Fisheries Review** , 2009 The behavior and sensory biology of elasmobranch fishes: an anthology in memory of Donald Richard Nelson Timothy C. Tricas, Samuel H. Gruber, 2013-06-29 The elasmobranch fishes include the living sharks skates and rays that are important members of nearly all marine ecosystems Their large size secretive behavior and wide ranging habits make them difficult to observe in the field or to maintain in captivity Consequently little is known about their natural behavior and how it is mediated by their sensory systems This volume is dedicated to the scientific contributions and memory of Donald Nelson a pioneer in the study of shark behavior sensory biology and remote instrumentation The two opening papers review Don Nelson s unique scientific accomplishments and provide insight into his strong bias towards study of animals in the field These are followed by 14 scientific papers on elasmobranch behavior sensory biology and current monitoring technologies The papers on elasmobranch sensory biology and behavior address questions on hearing the lateral line electroreception the brain orientation behavior chemical irritants feeding and reproduction The latter section of the volume presents papers on conventional tagging techniques ultrasonic telemetry physiological telemetry remote monitoring techniques archival tagging and satellite tagging The intent of this volume is to familiarize both new and established scientists with the sensory biology and behavior of sharks and rays and to encourage further behavioral research on these animals in their natural environment

A Preliminary Evaluation of the Status of Shark Species José Ignacio Castro, Christa M. Woodley, Rebecca L. Brudek, Food and Agriculture Organization of the United Nations, 1999 The status of shark species is reviewed based on the available data A review of the history of shark fisheries demonstrates that intensive shark fisheries are not sustainable Numerous problems are encountered in assessing shark populations a general lack of biological and fishery data lack of suitable models and lack of validated age estimates Sharks have an unusual combination of biological characteristics slow growth and delayed maturation long reproductive cycles low fecundity and long life spans These characteristics make them vulnerable to overfishing A preliminary evaluation of the status of shark species is made on the basis of historical data the reproductive potential of each species and the level of exploitation of the species In this document exploited shark species are classified numerically according to their vulnerability The majority of these species are listed as Category 1 indicating that there are not sufficient data to assess the species Available data indicate that sharks are very vulnerable and are threatened by overexploitation in many parts of the world **The Sharks of North America** Jose I. Castro, 2011-07-28 A complete reference to all the sharks inhabiting North American waters with excellent color illustrations of all the species
