Bowker's Guide to Characters in Fiction 2007 ,2008-02 *Irony in the Work of Philosophy* Claire

Colebrook,2002-01-01 In an era that proclaims itself postironic the question and problem of irony are of more interest than ever In this compelling inquiry Claire Colebrook first takes up all the major figures in post Cartesian philosophy on the subject of irony Spinoza Kant Hegel and Nietzsche She similarly examines the modern thinkers in the Anglo Saxon tradition Rorty Searle and de Man She then engages in an analysis of the Continental canon and the ironic dimension that marks contemporary philosophy Beyond the question of irony Colebrook treats the presence of irony in the history of philosophy and those points of overlap between nineteenth and twentieth century literature and philosophy Ultimately she extends what has belonged primarily to the domain of literature into a world of concepts Pianists Guide to Standard Teaching and Performance Literature Jane Magrath, This reference book is an invaluable resource for teachers students and performers for evaluating and selecting piano solo literature Concise and thoroughly researched thousands of works from the Baroque through the Contemporary periods have been graded and evaluated in detail Includes an alphabetical list of composers explanations of works and much more Brief Tests of Collection Strength Howard D. White,1995-09-26 For purposes of accreditation resource sharing and institutional mission librarians need to assess the strengths of their collections in particular subject areas This book describes and illustrates a brief test for determining a library s collection strength Though such tests are most often employed in academic libraries the methodology outlined by the author should be useful to all types of libraries in assessing the strength of their holdings In a time of increasing material and limited resources libraries need to be particularly judicious in deciding which works to acquire Oftentimes a library seeks to develop strong holdings in one or more subject areas Such an approach is especially useful for libraries that share their resources with other institutions To plan their acquisitions carefully and to be of greatest use to other consortia members a library needs to gauge the strength of its holdings accurately This volume describes and illustrates a relatively brief test to assign libraries a score for existing collection strength in a subject area Drawing upon expert human judgment and holdings data available from OCLC the test can assist librarians in setting and verifying collection levels on the RLG or WLN Conspectus scales Collection strength is often verified in a labor intensive fashion The brief test presented by the author is an economical alternative to the more typical labor intensive approach to collection analysis Computational Modeling of Narrative Inderjeet Mani,2022-05-31

The field of narrative or story understanding and generation is one of the oldest in natural language processing NLP and artificial intelligence AI which is hardly surprising since storytelling is such a fundamental and familiar intellectual and social activity In recent years the demands of interactive entertainment and interest in the creation of engaging narratives with life like characters have provided a fresh impetus to this field This book provides an overview of the principal problems approaches and challenges faced today in modeling the narrative structure of stories The book introduces classical

narratological concepts from literary theory and their mapping to computational approaches It demonstrates how research in AI and NLP has modeled character goals causality and time using formalisms from planning case based reasoning and temporal reasoning and discusses fundamental limitations in such approaches It proposes new representations for embedded narratives and fictional entities for assessing the pace of a narrative and offers an empirical theory of audience response These notions are incorporated into an annotation scheme called NarrativeML The book identifies key issues that need to be addressed including annotation methods for long literary narratives the representation of modality and habituality and characterizing the goals of narrators It also suggests a future characterized by advanced text mining of narrative structure from large scale corpora and the development of a variety of useful authoring aids This is the first book to provide a systematic foundation that integrates together narratology AI and computational linguistics It can serve as a narratology primer for computer scientists and an elucidation of computational narratology for literary theorists It is written in a highly accessible manner and is intended for use by a broad scientific audience that includes linguists computational and formal semanticists AI researchers cognitive scientists computer scientists game developers and narrative theorists Table of Contents List of Figures List of Tables Narratological Background Characters as Intentional Agents Time Plot Summary and Future Directions

Possible Worlds, Artificial Intelligence, and Narrative Theory Marie-Laure Ryan, 1991 In this important contribution to narrative theory Marie Laure Ryan applies insights from artificial intelligence and the theory of possible worlds to the study of narrative and fiction For Ryan the theory of possible worlds provides a more nuanced way of discussing the commonplace notion of a fictional world while artificial intelligence contributes to narratology and the theory of fiction directly via its researches into the cognitive processes of texts and automatic story generation Although Ryan applies exotic theories to the study of narrative and to fiction her book maintains a solid basis in literary theory and makes the formal models developed by AI researchers accessible to the student of literature By combining the philosophical background of possible world theory with models inspired by AI the book fulfills a pressing need in narratology for new paradigms and an interdisciplinary perspective

Human and Machine Consciousness David Gamez, 2018-03-07 Consciousness is widely perceived as one of the most fundamental interesting and difficult problems of our time However we still know next to nothing about the relationship between consciousness and the

brain and we can only speculate about the consciousness of animals and machines Human and Machine Consciousness presents a new foundation for the scientific study of consciousness It sets out a bold interpretation of consciousness that neutralizes the philosophical problems and explains how we can make scientific predictions about the consciousness of animals brain damaged patients and machines Gamez interprets the scientific study of consciousness as a search for mathematical theories that map between measurements of consciousness and measurements of the physical world We can use artificial intelligence to discover these theories and they could make accurate predictions about the consciousness of humans animals and artificial systems Human and Machine Consciousness also provides original insights into unusual conscious experiences such as hallucinations religious experiences and out of body states and demonstrates how designer states of consciousness could be created in the future Gamez explains difficult concepts in a clear way that closely engages with scientific research His punchy concise prose is packed with vivid examples making it suitable for the educated general reader as well as philosophers and scientists Problems are brought to life in colourful illustrations and a helpful summary is given at the end of each chapter The endnotes provide detailed discussions of individual points and full references to the scientific and philosophical literature

Coincidence and Counterfactuality Hilary P. Dannenberg, 2008-07-01 In *Coincidence and Counterfactuality* a groundbreaking analysis of plot Hilary P Dannenberg sets out to answer the perennial question of how to tell a good story While plot is among the most integral aspects of storytelling it is perhaps the least studied aspect of narrative Using plot theory to chart the development of narrative fiction from the Renaissance to the present Dannenberg demonstrates how the novel has evolved over time and how writers have developed increasingly complex narrative strategies that tap into key cognitive parameters familiar to the reader from real life experience Dannenberg proposes a new multidimensional theory for analyzing time and space in narrative fiction then uses this theory to trace the historical evolution of narrative fiction by focusing on coincidence and counterfactuality These two key plot strategies are constructed around pivotal moments when characters life trajectories or sometimes the paths of history converge or diverge The study s rich historical and textual scope reveals how narrative traditions and genres such as romance and realism or science fiction and historiographic metafiction rather than being separated by clear boundaries are in fact in a continual process of interaction and cross fertilization In highlighting critical stages in the historical development of narrative fiction the study produces new readings of works by pinpointing the innovative role played by particular authors in this evolutionary process Dannenberg s original investigation of plot patterns

is interdisciplinary incorporating research from narrative theory cognitive approaches to literature social psychology possible worlds theory and feminist approaches to narrative

Writing and Learning in Cross-national Perspective David Foster, 2017-10-03 Despite the increasingly global implications of conversations about writing and learning U S composition studies has devoted little attention to cross national perspectives on student writing and its roles in wider cultural contexts Caught up in our own concerns about how U S students make the transition as writers from secondary school to postsecondary education we often overlook the fact that students around the world are undergoing the same evolution How do the students in China England France Germany Kenya or South Africa the educational systems represented in this collection write their way into the communities of their chosen disciplines How for instance do students whose mother tongue is not the language of instruction cope with the demands of

academic and discipline specific writing And in what ways is U S students development as academic writers similar to or different from that of students in other countries With this collection editors David Foster and David R Russell broaden the discussion about the role of writing in various educational systems and cultures Students development as academic writers raises issues of student authorship and agency as well as larger issues of educational access institutional power relations system goals and students roles in society The contributors to this collection discuss selected writing purposes and forms characteristic of a specific national education system describe students agency as writers and identify contextual factors social economic linguistic cultural that shape institutional responses to writing development In discussions that bookend these studies of different educational structures the editors compare U S postsecondary writing practices and pedagogies with those in other national systems and suggest new perspectives for cross national study of learning writing issues important to all educational systems Given the worldwide increase in students entering higher education and the endless need for effective writing across disciplines and nations the insights offered here and the call for further studies are especially welcome and timely
