Magellans Clouds:

The Magellanic Clouds Bengt E. Westerlund, 1997-02-27 The first book to provide a synthesised and comprehensive account of the Magellanic Clouds

The Magellanic Clouds A.B. Muller, 2013-06-29 On March 28 and 29 1969 at the occasion of the dedication of the European Southern Observatory some 90 astronomers from all over the world gathered at the ESO headquarters at Santiago de Chile for discussing problems of the Magellanic Clouds They came from Argentina Australia Chile Mexico South Africa and the United States as well as from Europe these latter naturally mostly from the member states of ESO The choice of the subject was an obvious one When erecting the European Southern Observatory as a joint effort in European astronomy it was agreed from the beginning that the field of research should be the southern sky so far hardly explored with large telescopes Among the objects to be investigated the Magellanic Clouds rank highest together with the galactic centre region and the southern spiral structure Being located ten times closer than the nearest large stellar systems accessible to northern observers and containing a stellar population ranging in age from the oldest down of star formation the Clouds provide an ideal laboratory for research on the stage current problems in astrophysics Yet most of the northern observational astronomers were hardly acquainted with the Magellanic Clouds naturally they are used to think in terms of research projects that can be conducted at their observatories A survey of the status of knowledge and research on the Clouds therefore appeared in order now that the first medium size telescopes of ESO came into operation

Longair, Y. Kondo, 2012-12-06 ROSAT Observations G HASINGER Max Planck Institut für extraterrestrische Physik D 85740 Garching Germany Abstract This review describes the most recent advances in the study of the extragalactic soft X ray background and what we can learn about its constituents The deepest pointed observations with the ROSAT PSPC are discussed The logN logS relation is presented which reaches to the faintest X ray fluxes and to the highest AGN surface densities ever achieved The N S relation shows a 2 density in excess of 400 deg at the faintest fluxes and a flattening below the Einstein Deep Survey limit About 60% of the extragalactic background has been resolved in the deepest field Detailed source spectra and first optical and radio identifications will be discussed The results are put into perspective of the higher energy X ray background Key words X rays background radiations active galactic nuclei 1 Introduction The extragalactic X ray background XRB discovered about 30 years ago has been studied extensively with many X ray experiments in particular with the satellite HEAO I and II see e.g. Boldt 1987 and with ROSAT e.g. Hasinger et al 1993 Figure 1 shows a compilation of some of the most recent spectral measurements for the X ray background Over the energy range from 3 to about 100 keV its spectrum can be well approximated by an optically thin thermal bremsstrahlung model with kT 40 keV while at lower X ray energies a steepening into a new component has been observed observed e.g. **Literature 1986, Part 1** Prof. Dr. Roland Wielen, S.
