**Switzerland** International Monetary Fund. Monetary and Capital Markets Department, 2014-09-03 This Detailed Assessment of Observance on the Insurance Core Principles on Switzerland analyzes that the insurance industry in Switzerland is well developed having among the highest insurance penetration and expenditure per capita in the world The sector is dominated by a few players writing significant international business The life sector is dominated by two players responsible for 54 percent of the business and the top 10 life insurers account for 97 percent of the market The industry has weathered the 2008 crisis well however the current low interest rate environment is affecting the sector The lack of availability of Swiss government bonds to match long term liabilities of life insurers and

pension funds could be a source of vulnerability The long term nature of the liabilities of life insurers and pension funds could in principle be matched by investment in Swiss government securities Supervision focuses on ensuring sufficiency of liquid assets to meet policy liabilities Policyholders have priority claims over the tied assets In addition robust solvency requirements ensure there is enough capital to safeguard the insurers financial soundness under adverse conditions

**Denmark** International Monetary Fund. Monetary and Capital Markets Department,2014-12-18 This Technical Note on Stress Testing the Banking Insurance and Pension Sectors on Denmark discusses that since the beginning of the global financial crisis Danish banks have substantially increased their capital buffers The banks capital buffers provide for substantial loss absorbing capacity in case macro financial conditions deteriorate Under the most severe stress scenario the aggregate Tier 1 ratio of large Danish banks drops by almost 4 percentage points but the solvency position would remain adequate even in such a downturn scenario underlining the value of solid capital buffers Under the restrictive assumptions of the stress test the adverse scenarios have large negative effects on the solvency and profitability of life insurance companies Nonlife insurers would see a small decline in solvency ratios in the first year of the stress test Though starting from lower solvency levels than life insurers the aggregated impact on solvency ratios in the adverse scenario is comparably smaller

*From Extreme Events to Extreme Seasons: Financial Stability Risks of Climate Change in Mexico* Michaela Dolk,Mr. Dimitrios Laliotis,Sujan Lamichhane,2023-08-25 This paper explores the financial stability implications of acute physical climate change risks using a novel approach that focuses on a severe season associated with a sequence of tropical cyclone and flood events Our approach was recently applied to study physical risks in the Mexican financial sector but the framework is applicable to other countries as well We show that even if the scale of individual climate events may not be material at an aggregate national scale considering a sequence of events could lead to potentially significant macro financial impacts in the short term This could occur even if none of the individual events affect the particular region s with highest concentrations of banking sector exposures Our results indicate potential for even greater effects in the future given the increasing severity and frequency of extreme events from climate change Thus this paper highlights the importance of considering sequences of extreme physical risk events driven by climate change rather than just individual extreme events to better understand financial stability implications and design effective policies

*Money, Credit and Price Stability* Paul Dalziel,2000-10-26 In this innovative new work Dalziel derives a model that suggests a number of ways in which policymakers can promote the economy s highest possible sustainable growth rate without sacrificing price stability
