Macroscopic Ocular Pathology Fritz H. Stefani, Gerhard Hasenfratz, 2012-12-06 Today ophthalmic pathology deals more and more with pathogenesis using highly sophisticated techniques In recent decades it has expanded to such an extent that it now fills several volumes of a modern comprehensive atlas or textbook Black and white prints of the macroscopic appearance of dissected eyes are standard in modern textbooks Color photographs although providing more visual information and a better insight into the sometimes complex disease processes of the eye are however costly Nevertheless many ophthalmologic colleagues expressed their desire to have me prepare such an atlas It is not intended to replace one of the textbooks in this field but rather to supplement existing texts and to stimulate clinical and diagnostic thinking Hence it should be used in conjunction with textbooks on anatomy and ocular pathology The reader will find references on the different subjects in the excellent modern textbooks listed below Diagnosis and treatment in ophthalmology is to a great extent based on morphologic examination Clinical ophthalmologists have available such excellent tools as the slit lamp the gonioscope and the ophthalmoscope to study and document ocular disease in vivo under high magnification Both external eye structures and transparent ocular structures can be observed better in vivo than in the pathology laboratory Therefore the pathology of these is only presented in conditions in which direct visualization is normally difficult **Eye Pathology** Ralph C. Histopathology W.R. Lee,2013-04-17 The first edition of this book was written prior to 1991 and it seemed appropriate to revise and update the text in view of the rapid expansion in information which has occurred in the last decade Furthermore in the first edition the reproduction of some of the illustrations was not of sufficient standard to be of value to the reader Accordingly some of the inadequate figures have been replaced by colour figures which have been inserted into the text Colour has also been included because many histopathological illustrations e g special stains such as Gram PAS trichrome stains etc and immunohistochemical reactions are much better appreciated With regard to references I have taken advantage of the currently available access to all the medical literat ure which is what I anticipate will be the course of action of the reader Glasgow 2001 Acknowledgements It is a pleasure to re cord the support I have received in the last decade from Professors Wallace Foulds Colin Kirkness and Gordon Dutton and from Mr Bertil Damato in their continuing efforts to educate me in the subtleties of clinical ophthalmology I am particularly indebted to Dr Sarah Coupland who provided the information on lymphoid neoplasia which is included in this book and I must thank Dr Weng Sehu who established the computer equipment which has been so valuable in the preparation of the new illustrations Angiogenic
