The Epidemiology of Plant Diseases D.G. Jones, 2013-03-09 Most branches of science have what might be termed a core area which is both related to and helps to integrate peripheral topics to form the overall subject area Without this central link the subject is simply a collection of disparate albeit generally related topics What genetics is to plant breeding epidemiology is to the subject of plant pathology and no matter what individual topic is considered it is always possible to recognize the interaction with and relationship to epidemiological factors Broadly speaking until the 1950s plant pathology was considered as the applied side of mycology and indeed the British Society of Plant Pathology was spawned from its mentor the British Mycological Society with considerable help from The Association of Applied Biology However with the exploding world population and the growing demand for food plant pathologists became increasingly aware of the need for a more considered measured precise and even holistic approach to their subject and particularly to plant disease management Looking back over 40 years of teaching and research in plant pathology it was very clear that the core of the subject was epidemiology and that this new study was developing a very distinct identity which was rapidly being recognized in its own right The shotgun approach to plant disease control was quickly perceived to be too inexact and almost every aspect of the subject was being reviewed refined and advanced **Annual Plan for Fiscal Year ...** National Toxicology Program (U.S.), 1984 Interstitial Pulmonary Diseases Moises Selman L, Roberto Barrios, 1991-03-31 This book discusses basic and clinical aspects of selected topics in interstitial lung disease and the pathogenic mechanisms of pulmonary fibrosis Topics include the pathogenesis of interstitial fibrosis from the initial injury to the excessive accumulation of collagens in lung parenchyma detailed analysis of the role of fibroblasts mast cells and growth factors in the induction of fibrogenesis collagens collagenases and proteoglycans and hypersensitivity pneumonitis and asbestosis Other topics include morphological aspects including molecular biology techniques imaging methods functional respiratory tests and pulmonary arterial hypertension and sleep disorders in patients with ILD This book provides important information for physicians

surgeons pulmonary researchers molecular pathologists biomedical researchers and students and others interested in interstitial lung disease *Neoplasms of the Liver* Kunio Okuda,Kamal G. Ishak,2013-11-21 Primary liver cancer is a rather unusual malignancy in that the incidence varies tremendously from one geographical area to another While relatively uncommon in Western countries it is the most prevalent malignant neoplasm in Southeast Asia South Africa and many other regions in all the countries in which primary liver cancer is very prevalent account for more than two thirds of the world's population In China alone approximately 100 000 people die every year from primary liver cancer mostly hepatocellular carcinoma The incidence is rising in some countries especially Japan where it has doubled among males in the past 15 years or so a staggering and puzzling trend Since the demonstration of an etiological relationship between hepatitis B virus infection and hepatocellular carcinoma intensive research has been conducted in an effort to elucidate the role of the virus in hepatocarcinogenesis Though much progress has been made a full understanding of the molecular events leading to malignant transformation of the hepatocyte will probably require many more years of rigorous investigation Chemical carcinogens and several industrial pollutants may also be involved in the etiopathogenesis of neoplastic liver disease
