Biomaterials Rosario Pignatello, 2011-11-16 These contribution books collect reviews and original articles from eminent experts working in the interdisciplinary arena of biomaterial development and use. From their direct and recent experience the readers can achieve a wide vision on the new and ongoing potentialities of different synthetic and engineered biomaterials. Contributions were selected not based on a direct market or clinical interest but on results coming from a very fundamental studies. This too will allow to gain a more general view of what and how the various biomaterials can do and work for along with the methodologies necessary to design develop and characterize them without the restrictions necessary imposed by industrial or profit concerns. Biomaterial constructs and supramolecular assemblies have been studied for example as drug and protein carriers, tissue scaffolds or to manage the interactions between artificial devices and the body. In this volume of the biomaterial series have been gathered in particular reviews and papers focusing on the application of new and known macromolecular compounds to nanotechnology and nanomedicine along with their chemical and mechanical engineering aimed to fit specific biomedical purposes.

Textbook of Stroke Medicine Michael Brainin, Wolf-Dieter Heiss, 2009-11-19 This concise and informative textbook is aimed at trainee doctors beginning work on a stroke unit or residents embarking on their postdoctoral training in stroke care. It has a practical approach covering all important issues of prevention, diagnosis and treatment of cerebrovascular diseases. Chapters on the basics of neuropathology and pathophysiology are followed by reviews of clinical issues including neuroimaging, clinical assessment, diagnosis and treatment, stroke in the young and stroke related dementia. Topics of rising importance are covered in chapters on stroke unit management, monitoring and management of complications including infections, recommendations for thrombolysis, interventions and neurosurgical procedures and clear and balanced recommendations for secondary prevention. Finally neuropsychological syndromes are explained and an up to date view on neurorehabilitation is presented. The authors are all experts in their field and many of them teach on the European Master's Program on Stroke Medicine which is supported and endorsed by the European Stroke Organization.

Measuring the Skin Pierre G. Agache, Pierre Agache, Philippe Humbert, 2004-07-15 Measuring the Skin presents all techniques devoted to non invasive normal or diseased skin measurement. As opposed other books this text embraces old and new validated techniques for all skin suborgans and functions. The book is ideal as a small encyclopedia since it provides the answer to any question concerning skin measurement. Each technique is discussed to help select the most appropriate one for each special case. Another novel feature is that the book bases the skin investigation on the physiology and anatomy. Each chapter is preceded by a compendium of current knowledge on the structure or function dealt with. The book may also be used as a research tool. It contains a novel and presently unique list of more than 400 physical and biological skin constants which are all referenced.

Comparative Physiology of the Vertebrate Kidney William H. Dantzler, 2012-12-06 This volume emphasizes the comparative approach to understanding

vertebrate renal function I am convinced that this approach is of particular value in understanding both the details of renal function at the cellular and subcellular levels and the renal role in regulating fluid volumes and solute concentrations My exposure to this approach first occurred during a student research experience in the laboratory of Wilbur H Sawyer who also provided an introduction to the works of Homer W Smith and August Krogh The importance of this approach was reinforced by doctoral and postdoctoral research in the laboratory of Bodil Schmidt Nielsen It has been confirmed through years of personal experience since then My research and my understanding of renal function have been aided through the years by collaboration and discussion with numerous students and associates Of particular importance in developing my views on comparative renal function and especially on the relationship of structure to function has been my long association with my colleague and friend Eldon J Braun Donald S Farner who suggested the writing of this volume provided valuable editorial assistance Much of my personal research in this area has been supported over the years by grants from the United States National Science Foundation and National Institutes of Health The writing of this volume was completed while I was in Würzburg Federal Republic of Germany supported by a Senior U S Scientist Award from the Alexander von Humboldt Foundation

Nephrocalcinosis Calcium Antagonists and Kidney Karl-Horst Bichler, Walter L. Strohmaier, 2012-12-06 The effect of calcium antagonists on heart muscle and blood circulation is the reason that they have found widespread clinical application for a number of years Less well known in contrast is the effect this group of substances has on the kidneys both on kidney cells and the blood flow through the kidneys This effect was the subject of a workshop we organized in Tübingen in June 1986 Different groups studied the effects of these substances especially in animals on the processing of calcium by the kidney cells and on blood flow A possible explanation is that the calcium antagonists block the influx of calcium through special cell canals especially the cells of the distal tubule It is necessary to test whether there is a blockade or only a reduction in the passage of calcium Our understanding of the effect of calcium antagonists is in large part based on the results of morphologic physiologic and pharmacologic studies of calcium in the kidneys The particular processes involved in nephrocalcinosis are special objects of study with regard to calcium antagonists This book presents the results of experimental studies of the effect of calcium antagonists on nephrocalcinosis and acute renal failure after ischemia In this context the clinician is particularly interested in the use of calcium antagonists to protect against the kidney in urolithiasis in acute renal failure and during kidney transplantation The book is thus of interest to urologists and nephrologists as well as pharmacologists biochemists physiologists and others in research
