Ivanikova, Sergey Sozin, Vladimir Sobolev, 2019-10-18 *Disease Pathways An Atlas of Human Disease Signaling Pathways* is designed to fill a void of illustrated reviews about the cellular mechanisms of human diseases. It covers 42 of the most common non oncologic diseases and illustrates the connections between the molecular causes of the disease and its symptoms. This resource provides readers with detailed information about the disease molecular pathways while keeping the presentation simple. Pathway models that aggregate the knowledge about protein protein interactions have become indispensable tools in many areas of molecular biology pharmacology and medicine. In addition to disease pathways the book includes a comprehensive overview of molecular signaling biology and application of pathway models in the analysis of big data for drug discovery and personalized medicine. This is a must have reference for general biologists biochemists students medical workers and everyone interested in the cellular and molecular mechanisms of human disease. Over 145 full color illustrations of the molecular and cellular cascades underlying the disease pathology. Disease pathways are based on computational models from Elsevier's Disease Pathway Collection published for the first time outside of Pathway Studio commercial software. Each relationship on the pathway models is supported by references to scientific articles and can be examined at freely available online resources.

Cancer Systems Biology Edwin Wang, 2010-05-04 The unprecedented amount of data produced with high throughput experimentation forces biologists to employ mathematical representation and computation to glean meaningful information in systems level biology. Systems Biology for Signaling Networks Sangdun Choi, 2010-08-09 System Biology encompasses the knowledge from diverse fields such as Molecular Biology Immunology Genetics Computational Biology Mathematical Biology etc not only to address key questions that are not answerable by individual fields alone but also to help in our understanding of the complexities of biological systems Whole genome expression studies have provided us the means of studying the expression of thousands of genes under a particular condition and this technique had been widely used to find out the role of key macromolecules that are involved in biological signaling pathways However making sense of the underlying complexity is only possible if we interconnect various signaling pathways into human and computer readable network maps These maps can then be used to classify and study individual components involved in a particular phenomenon Apart from transcriptomics several individual gene studies have resulted in adding to our knowledge of key components that are involved in a signaling pathway It therefore becomes imperative to take into account of these studies also while constructing our network maps to highlight the interconnectedness of the entire signaling pathways and the role of that particular individual protein in the pathway This collection of articles will contain a collection of pioneering work done by scientists working in regulatory signaling networks and the use of large scale gene expression and omics data The distinctive features of this book would be Act a single source of information to understand the various components of different signaling network roadmap of biochemical pathways the nature of a molecule of interest in a particular pathway etc Serve as a platform to highlight the key findings in this highly volatile and evolving field and Provide answers to various techniques both related to microarray and cell signaling to the readers
