Humedades Luis Humberto Casas, 2012-11-21 Para garantizar un buen comportamiento hidráulico de la edificación corregir y evitar su deterioro en el tiempo lo mejor es que el agua no esté presente es decir que no la toques si la toca no penetre que si penetra no se traslade o sea no circule y que si circula se mueva para que se evapore rápidamente. Para que esto ocurra necesariamente tenemos que evitar su presencia en cualquier estado sólido líquido gaseoso aislarla del elemento constructivo para que no penetre usando materiales impermeables y estancos sellando los poros y cualquier vía de penetración e impidiendo su circulación y difusión finalmente garantizando un buen secado a partir de una buena asoleación y ventilación que permita una rápida evaporación.
