Pattern Formation in Continuous and Coupled Systems Martin Golubitsky, Dan Luss, Steven H. Strogatz, 1999-06-22
Systems that generate new types of pattern such as discrete coupled systems systems with global coupling and combustion experiments were stressed as were new types of pattern **BOOK JACKET** **Pattern Formation in Continuous and Coupled Systems** Martin Golubitsky, Dan Luss, Steven H. Strogatz, 1999-06-01 **Pattern Formation in Continuous and Coupled Systems** Martin Golubitsky, Dan Luss, Steven H. Strogatz, 2012-12-06 This IMA Volume in Mathematics and its Applications **PATTERN FORMATION IN CONTINUOUS AND COUPLED SYSTEMS** is based on the proceedings of a workshop with the same title but goes beyond the proceedings by presenting a series of mini review articles that survey and provide an introduction to interesting problems in the field The workshop was an integral part of the 1997-98 IMA program on **EMERGING APPLICATIONS OF DYNAMICAL SYSTEMS** I would like to thank Martin Golubitsky University of Houston Mathematics Dan Luss University of Houston Chemical Engineering and Steven H. Strogatz Cornell University Theoretical and Applied Mechanics for their excellent work as organizers of the meeting and for editing the proceedings I also take this opportunity to thank the National Science Foundation NSF and the Army Research Office ARO whose financial support made the workshop possible Willard Miller Jr Professor and Director **v PREFACE** Pattern formation has been studied intensively for most of this century by both experimentalists and theoreticians and there have been many workshops and conferences devoted to the subject In the IMA workshop on Pattern Formation in Continuous and Coupled Systems held May 11-15 1998 we attempted to focus on new directions in the patterns literature *Mathematical Models for Biological Pattern Formation* Philip K. Maini, Hans G. Othmer, 2012-12-06 This 121st IMA volume entitled **MATHEMATICAL MODELS FOR BIOLOGICAL PATTERN FORMATION** is the first of a new series called **FRONTIERS IN APPLICATION OF MATHEMATICS** The **FRONTIERS** volumes are motivated by IMA programs and workshops but are specially planned and written to provide an entree to and assessment of exciting new areas for the application of mathematical tools and analysis The emphasis in **FRONTIERS** volumes is on surveys exposition and outlook to attract more mathematicians and other scientists to the study of these areas and to focus efforts on the most important issues rather than papers on the most recent research results aimed at an audience of specialists The present volume of peer reviewed papers grew out of the 1998-99 IMA program on **Mathematics in Biology** in particular the Fall 1998 emphasis on **Theoretical Problems in Developmental Biology and Immunology** During that period there were two workshops on Pattern Formation and Morphogenesis organized by Professors Murray Maini and Othmer James Murray was one of the principal organizers for the entire year program I am very grateful to James Murray for providing an introduction and to Philip Maini and Hans Othmer for their excellent work in planning and preparing this first **FRONTIERS** volume I also take this opportunity to thank the National Science Foundation whose financial support of the IMA made the **Mathematics in Biology** program possible *Symmetries and Overdetermined Systems of Partial*

Deterministic Learning Theory for Identification, Recognition, and Control Cong Wang, David J. Hill, 2018-10-03 Deterministic Learning Theory for Identification Recognition and Control presents a unified conceptual framework for knowledge acquisition representation and knowledge utilization in uncertain dynamic environments It provides systematic design approaches for identification recognition and control of linear uncertain systems Unlike many books currently available that focus on statistical principles this book stresses learning through closed loop neural control effective representation and recognition of temporal patterns in a deterministic way A Deterministic View of Learning in Dynamic Environments The authors begin with an introduction to the concepts of deterministic learning theory followed by a discussion of the persistent excitation property of RBF networks They describe the elements of deterministic learning and address dynamical pattern recognition and pattern based control processes The results are applicable to areas such as detection and isolation of oscillation faults ECG EEG pattern recognition robot learning and control and security analysis and control of power systems A New Model of Information Processing This book elucidates a learning theory which is developed using concepts and tools from the discipline of systems and control Fundamental knowledge about system dynamics is obtained from dynamical processes and is then utilized to achieve rapid recognition of dynamical patterns and pattern based closed loop control via the so called internal and dynamical matching of system dynamics This actually represents a new model of information processing i e a model of dynamical parallel distributed processing DPDP

Codes, Systems, and Graphical Models Brian Marcus, Joachim Rosenthal, 2012-12-06 Coding theory system theory and symbolic dynamics have much in common Among the central themes in each of these subjects are the construction of state space representations understanding of fundamental structural properties of sequence spaces construction of input output systems and understanding the special role played by algebraic structure A major new theme in this area of research is that of codes and systems based on graphical models This volume contains survey and research articles from leading researchers at the interface of these subjects

Membrane Transport and Renal Physiology Harold E. Layton, Alan M. Weinstein, 2002-08-06 The papers in this volume arose out of the workshop Membrane Transport and Renal Physiology which was conducted as part of the IMA 1998 1999 program year Mathematics in Biology The workshop brought together physiologists biophysicists and applied mathematicians who share a common interest in solute and water transport in biological systems especially in the integrated function of the kidney Solute and water transport through cells involves fluxes across two cell membranes usually via specialized proteins that are integral membrane components By means of mathematical representations transport fluxes

can be related to transmembrane solute concentrations and electrochemical driving forces. At the next level of functional integration these representations can serve as key components for models of renal transcellular transport. Ultimately simulations can be developed for transport dependent aspects of overall renal function. Workshop topics included solute fluxes through ion channels cotransporters and metabolically driven ion pumps transport across fiber matrix and capillary membranes coordinated transport by renal epithelia the urine concentrating mechanism and intra renal hemodynamic control. This volume will be of interest to biological and mathematical scientists who would like a view of recent mathematical efforts to represent membrane transport and its role in renal function.

Mathematical Approaches for Emerging and Reemerging Infectious Diseases: An Introduction Carlos Castillo-Chavez, 2002-05-02. This book grew out of the discussions and presentations that began during the Workshop on Emerging and Reemerging Diseases May 17-21 1999 sponsored by the Institute for Mathematics and its Application (IMA) at the University of Minnesota with the support of NIH and NSF. The workshop started with a two day tutorial session directed at ecologists epidemiologists immunologists mathematicians and scientists interested in the study of disease dynamics. The core of this first volume Volume 125 covers tutorial and research contributions on the use of dynamical systems deterministic discrete delay PDEs and ODEs models and stochastic models in disease dynamics. The volume includes the study of cancer HIV pertussis and tuberculosis. Beginning graduate students in applied mathematics scientists in the natural social or health sciences or mathematicians who want to enter the fields of mathematical and theoretical epidemiology will find this book useful.

Mathematics of the Internet Brenda Dietrich, Rakesh V. Vohra, Patricia Brick, 2001-12-14. The use of the internet for commerce has spawned a variety of auctions, marketplaces, and exchanges for trading everything from bandwidth to books. Mechanisms for bidding, agents, dynamic pricing, and combinatorial bids are being implemented in support of internet-based auctions, giving rise to new versions of optimization and resource allocation models. This volume, a collection of papers from an IMA Hot Topics workshop in internet auctions, includes descriptions of real and proposed auctions, complete with mathematical model formulations, theoretical results, solution approaches, and computational studies. This volume also provides a mathematical programming perspective on open questions in auction theory and provides a glimpse of the growing area of dynamic pricing.
