Dubessy, M.-C. Caumon, F. Rull, 2012-11-20 Spectroscopic methods such as Raman are used to investigate the structure and dynamics of matter They are essential for the study of the different types of mineral or organic materials produced at the Earth's surface or interior As a result of technological improvements in gratings detectors filters and personal computers in the last decade many micro Raman spectrometers have become plug and play instruments very easy to use and available at a lower cost than the early Raman microprobes Thus many laboratories in Earth Sciences and Cultural Heritage are equipped with these new spectrometers Commercial portable Raman spectrometers working in the field have also contributed to the spread of Raman spectroscopy Poor levels of education in terms of Raman spectroscopy in undergraduate courses in Earth Sciences make it difficult for individuals to obtain information of the highest quality relevant

to Earth sciences and Cultural Heritage This volume is therefore timely Four main topics are addressed Theory Methodology including the instrumentation Experimental aspects and Application      **Publications in Engineering** ,2002      **Internal Standardization and Calibration Architectures for Chemical Sensors** Ronald E.
