Gordon, 1999-06-17 As the amount of information

recorded and stored electronically grows ever larger it becomes increasingly useful if not essential to develop better and more efficient ways to summarize and extract information from these large multivariate data sets The field of classification does just that investigates sets of objects to see if they can be summarized into a small number of classes comprising similar objects Researchers have made great strides in the field over the last twenty years and classification is no longer perceived as being concerned solely with exploratory analyses The second edition of Classification incorporates many of the new and powerful methodologies developed since its first edition Like its predecessor this edition describes both clustering and graphical methods of representing data and offers advice on how to decide which methods of analysis best apply to a particular data set It goes even further however by providing critical overviews of recent developments not widely known including efficient clustering algorithms cluster validation consensus classifications and the classification of symbolic data The author has taken an approach accessible to researchers in the wide variety of disciplines that can benefit from classification analysis and methods He illustrates the methodologies by applying them to data sets smaller sets given in the text larger ones available through a Web site Large multivariate data sets can be difficult to comprehend the sheer volume and complexity can prove overwhelming Classification methods provide efficient accurate ways to make them less unwieldy and extract more information Classification Second Edition offers the ideal vehicle for gaining the background and learning the methodologies and begin putting these techniques to use

Quantitative and Ecological Aspects of Plant Breeding J. Hill,Heiko C. Becker,P.M. Tigerstedt,1997-09-30 Latest figures suggest that approximately 20% of the world s population of six billion is malnourished because of food shortages and inadequate distrib ution systems To make matters worse it is estimated that some 75 billion metric tons of soil are removed annually from the land by wind and soil ero sion much of it from agricultural land which is thereby rendered unsuitable for agricultural purposes Moreover out of a total land area under cultivation 9 6 of approximately 1 5 x 10 ha some 12 x 10 ha of arable land are destroyed and abandoned worldwide each year because of unsustainable agricultural practices Add to this the fact that the world population is increasing at the rate of a quarter of a million per day and the enormity of the task ahead becomes apparent To quote the eminent wheat breeder E R Sears It seems clear that plant geneticists can look forward to an expanded role in the 21st century particularly in relation to plant improvement The suc cess of these efforts may go a long way towards determining whether the world s increasing billions of humans will be adequately fed Food for an ever increasing population will have to be produced not only from an ever diminishing but from what will become an ever deteriorating land resource unless justifiable environmental concerns are taken into account
